N Engl J Med 2019;380:1256-66. DOI: 10.1056/NEJMra1813254 Copyright © 2019 Massachusetts Medical Society. TEARLY 239,000 NEW CASES OF OVARIAN CANCER (AND 152,000 ASSOCIated deaths) are reported worldwide annually, with the highest incidence rates in North America and central and eastern Europe. The most common histologic subtype is high-grade serous ovarian cancer (accounting for 65% of cases). Other histologic subtypes include low-grade serous, endometrioid, clearcell, and mucinous ovarian cancers, as well as ovarian carcinosarcoma. Mucinous ovarian cancer is a rare tumor, probably accounting for 3% of all epithelial ovarian cancers, and often presents a diagnostic and therapeutic conundrum for oncologists. For decades, the management of mucinous ovarian cancer was based on guidelines developed for serous ovarian cancer. However, experience with mucinous ovarian cancer and an understanding of its biologic features have shown that it is a unique disease requiring unique management. This review highlights the distinguishing features of mucinous ovarian cancer and provides an update on its molecular landscape and surgical and medical management.

### A SEPARATE DISEASE ENTITY

The gene-expression profile of mucinous ovarian cancer is distinct from that of serous ovarian cancer.7 Sixty-five to 80% of mucinous ovarian cancers are diagnosed at an early stage, according to the classification of the International Federation of Gynecology and Obstetrics (FIGO stage I, defined as a tumor confined to a single ovary) (Table S1 in the Supplementary Appendix, available with the full text of this article at NEJM.org).8 Patients with serous ovarian cancer tend to present at an advanced stage, with intraperitoneal spread in more than 80% of cases (Table 1).9,10 A potential explanation for this difference is that mucinous ovarian cancers are usually very large primary tumors (typically >15 cm in diameter) that generate symptoms while the disease is still localized to the ovary. Thus, the overall prognosis is much better for women with mucinous ovarian cancer than for those with other subtypes of epithelial ovarian cancer.8 Five-year overall survival among patients with localized mucinous ovarian cancer exceeds 90%; by contrast, when mucinous ovarian cancer has spread to the peritoneum in the abdominal cavity or beyond (stage III or IV), the estimated median overall survival is between 12 and 33 months. 9,11-16

Mucinous tumors are characteristically diagnosed in patients who are younger than patients in whom other epithelial ovarian cancers are diagnosed.<sup>6,9</sup> In a recent analysis of data from the Surveillance, Epidemiology, and End Results (SEER) cancer registry, 26% of mucinous ovarian cancers were diagnosed in women younger than 44 years.<sup>9</sup> Mucinous ovarian cancer is the most common histologic subtype in the subgroup of patients who are eligible for fertility-sparing surgery.<sup>17,18</sup>

Table 1. Epidemiologic, Clinical, and Pathological Features of Mucinous Ovarian Carcinoma as Compared with High-Grade Serous Ovarian Cancer.\* Mucinous Ovarian Carcinoma High-Grade Serous Ovarian Carcinoma Variable (prevalence, 3%) (prevalence, 65%) Age Median age at diagnosis (yr) 53 61 <44 yr at presentation (%) 26 5 Early stage at diagnosis (%) 65-80 Tumor marker CEA or CA 19-9 CA-125 Risk factors Smoking Nulliparity, early menarche, late menopause, germline BRCA1 or BRCA2 mutations Rate of response to platinum-based 20-60 chemotherapy (%) Overall survival Stage 1, at 5 yr (%) 92 84 Advanced stage, median (mo) 12-33 35-60

In a series of 545 patients undergoing such surgery, 51% (280 patients) had mucinous ovarian cancer.<sup>17</sup>

Most serous ovarian cancers originate in the fimbria of the fallopian tubes.19 Mucinous ovarian cancers appear to evolve in stepwise fashion from benign epithelium to a preinvasive lesion to carcinoma (Fig. 1).3,5,20,21 Mucinous ovarian cancer is frequently mixed with areas of mucinous cystadenoma or precancerous lesions (borderline mucinous tumor, borderline tumor with intraepithelial carcinoma, microinvasive carcinoma, or a combination of such lesions). This continuum of malignant progression is in stark contrast to the development of serous ovarian cancer and is similar to the development of colorectal cancer. KRAS mutations are observed in 40 to 65% of mucinous carcinomas. The same KRAS mutation has been detected in the carcinoma foci and in surrounding borderline malignant and benign areas, suggesting that the mutation is an early founder event. 22-24 Other genomic alterations such as HER2 amplification or TP53 mutation are almost exclusively observed in the carcinomatous component of mucinous tumors, supporting the view that these alterations represent later events in malignant transformation. 23,24 Another hypothesis regarding the histogenesis of mucinous ovarian cancers is that they may be derived from transitional cells (Walthard cell nests are observed in 59% of mucinous neoplasms) or metaplasia at the fallopian tube-peritoneal junction.<sup>25</sup>

Risk factors for serous ovarian cancer include nulliparity, early menarche, late menopause, and germline BRCA1 or BRCA2 mutations, none of which are risk factors for mucinous ovarian cancer. The only clinical risk factor associated with mucinous ovarian cancer is tobacco smoking. A genomewide association study of 1644 mucinous ovarian cancers identified susceptibility alleles at 2q13, 2q31.1, and 19q13.2 (the potential candidate gene is HOXD9 for locus 2q31.1).<sup>26</sup> The incidence of mucinous ovarian cancer decreased by 5% annually in the United States between 1995 and 2009 and has been stable since 2009.10 These trends could be attributable to a decline in smoking or to improvements in the histologic diagnosis of mucinous ovarian cancer in the late 1990s and early 2000s. 10,27,28

### DIAGNOSTIC CHALLENGE

Early reports probably overestimated the prevalence of mucinous ovarian cancer, with some studies reporting that they represented 10 to 15% of epithelial ovarian cancers. 9,29,30 However, a central pathological review of ovarian tumors

<sup>\*</sup> Some of the data presented in the table are from Ferlay et al.,1 Reid et al.,2 Peres et al.,9 and Torre et al.10 CEA denotes carcinoembryonic antigen.

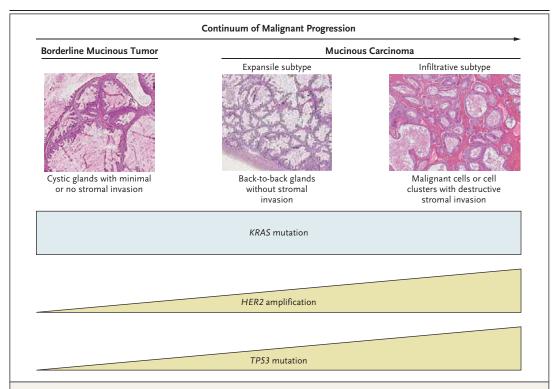

Figure 1. Stages in the Progression of Mucinous Ovarian Tumors.

Mucinous ovarian tumors develop on a continuum from benign epithelium to preinvasive (borderline) carcinoma to mucinous carcinoma. KRAS mutations are an early event, whereas other oncogenic alterations (HER2 amplifications or TP53 mutations) may be acquired later in the course of malignant transformation.

initially classified as primary ovarian mucinous carcinomas revealed that 50 to 70% were in fact metastases from other sites. According to different reports, the true proportion of ovarian epithelial cancers that are mucinous ovarian cancers is closer to 1 to 3%.<sup>29,31</sup>

## RULING OUT OVARIAN METASTASES FROM NONOVARIAN OCCULT PRIMARY CANCER

A combination of clinical, pathological, and immunohistochemical investigations is useful in distinguishing a primary mucinous ovarian tumor from metastatic disease to the ovary (Krukenberg tumor) (Fig. 2).<sup>29,32,33</sup> A comprehensive work-up is performed to rule out an occult gastro-intestinal primary cancer (on the basis of colonoscopy and upper gastrointestinal endoscopy, including endoscopic ultrasonography) or a cervical, breast, or uterine cancer.<sup>29,32</sup> These investigations are recommended if clinical or radiologic findings suggest a nonovarian primary cancer on the basis of tumor size (<10 cm

in diameter), the presence of bilateral tumors, peritoneal spread or another indication of advanced stage, or a combination of these findings (Fig. 2).<sup>29</sup>

### DIAGNOSING THE SUBTYPE OF MUCINOUS TUMOR

The diagnosis of mucinous ovarian carcinoma requires evidence of malignant proliferation covering an area of more than 10 mm<sup>2</sup> as determined on cross section. For decades, mucinous ovarian cancer was further classified as grade 1, 2, or 3 according to the presence or absence of nuclear atypia and the proportion of solid glandular component. However, in 2014, the World Health Organization (WHO) introduced a new diagnostic classification of mucinous ovarian carcinoma, with two categories according to the growth pattern: the expansile (confluent) subtype and the infiltrative subtype.5 The expansile subtype is characterized by a confluent glandular growth pattern, with little intervening normal ovarian stroma (minimal or no stromal in-

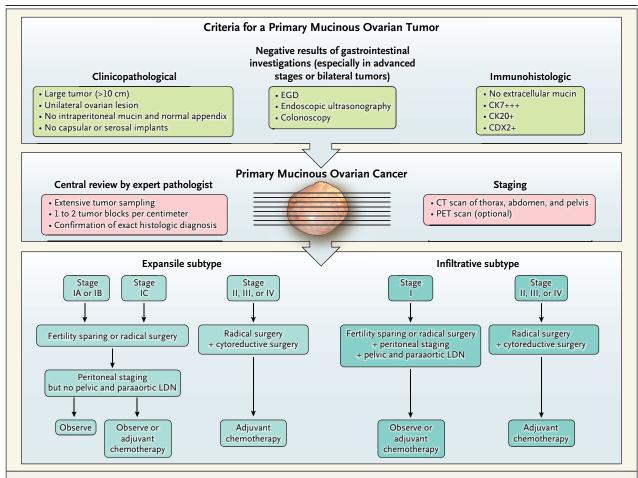

Figure 2. Overall Management of Mucinous Ovarian Tumors.

The first step in managing a primary mucinous ovarian tumor is to rule out mucinous metastasis to the ovary (a nonovarian primary mucinous cancer) on the basis of a combination of clinical and pathological features. Extensive sampling of these large heterogeneous tumors and review by an expert pathologist are required for accurate diagnosis. Once the diagnosis has been established, both staging and accurate histologic classification guide surgical and medical management. The plus signs in CK7+++, CK20+, and CDX2+ denote the intensity of positive staining on immunohistochemical analysis, with more plus signs indicating higher staining intensity. CT denotes computed tomography, EGD esophagogastroduodenoscopy, LDN lymphadenectomy, and PET positron-emission tomography.

vasion), whereas the infiltrative subtype is characterized by obvious evidence of destructive stromal invasion by malignant glands, cell nests, or individual cells and is often associated with a desmoplastic stromal reaction (Fig. 1).<sup>5,34</sup> several, albeit small, studies have confirmed that the risk of relapse for women with stage I expansile mucinous ovarian cancer is extremely low (3 recurrences were observed among 75 cases; 2 of the 3 were salvaged with secondary sur-

# PROGNOSTIC IMPLICATIONS OF THE WHO 2014 HISTOLOGIC CLASSIFICATION

The distinction between expansile and infiltrative subtypes is clinically important in stage I disease (Table 2), so surgical staging of these tumors is crucial.<sup>3-38</sup> The expansile growth pattern suggests a lower metastatic potential, and

that the risk of relapse for women with stage I expansile mucinous ovarian cancer is extremely low (3 recurrences were observed among 75 cases; 2 of the 3 were salvaged with secondary surgery). Moreover, more than 95% of women with expansile mucinous ovarian cancers present with stage I disease. Lase of the expansile subtype with peritoneal spread are very scarce (only 3 reported cases) (Table 2). Table 2). In contrast, infiltrative mucinous ovarian cancer is more aggressive, with at least 26% of women presenting with more advanced, nonlocalized

Muyldermans et al., <sup>37</sup> 2013		21	6	3	9 at stage III	9 recurrences: 1 at stage IA, 1 at stage IC, 7 at stage III
Gouy et al.,38 2018		35	20	15 (7 at stage IC1, 7 at stage IC2, 1 at stage IC3)	Not included	6 recurrences: 2 at stage IA, 1 at stage IC1, 2 at stage IC2, 1 at stage IC3; 4 deaths¶
Total		107	43	21	28	36 recurrences: 14 at stage   (14/79 [18%]) and 22 at stage III or IV (22/24 [92%])

In this study, four patients with the expansile subtype had stage I disease that was not classified as either stage IA or stage IC. One additional patient with stage I disease died from acute myeloid leukemia while free of the ovarian disease.

and one at stage IV) survived with persistent disease. One patient with a recurrence survived but with persistent disease.

In this study, 15 patients with the infiltrative subtype had stage I disease that was not classified as either stage IA or IC.
One additional patient with stage I disease died from thyroid cancer while free of the ovarian disease. In the same series, two patients with recurrent infiltrative disease (one at stage III

disease at diagnosis; in 17 to 30% of patients who appear to have stage I disease, lymph-node metastases are detected (as compared with no women with expansile mucinous ovarian cancer). Even if the cancer is diagnosed at an early stage, the prognosis for women with infiltrative mucinous ovarian cancer is much poorer, with fatal relapses reported for 15 to 30% of patients with stage I disease (Table 2). Thus, the distinction between stage I expansile and stage I infiltrative subtypes is crucial, since it may influence indications for staging lymphadenectomy or adjuvant chemotherapy.

### SURGICAL MANAGEMENT

## MANAGEMENT OF EARLY-STAGE MUCINOUS CARCINOMA

For young patients wishing to preserve their fertility, a unilateral salpingo-oophorectomy is usually proposed, with peritoneal staging procedures (cytology, peritoneal biopsies, and omentectomy). In older patients, bilateral salpingooophorectomy is preferred. The priority is to choose the best surgical approach (laparotomy or a minimally invasive laparoscopic approach) for minimizing the risk of perioperative tumor rupture. Such a rupture would alter the FIGO stage and influence both surgical and medical management of histologically confirmed mucinous ovarian cancer. Unilateral salpingo-oophorectomy is a reasonable approach in women with stage I disease who wish to preserve their fertility. The risk of recurrence is lower than that reported for women with stage I serous cancers (6% vs. 20%, P<0.001).17,40 Only one study has evaluated the results of fertility-sparing surgery in women with the expansile subtype of mucinous ovarian cancer and those with the infiltrative subtype, and the results suggest that it could be safely used for both subtypes.<sup>41</sup>

A small fraction of patients with macroscopically normal findings on surgical exploration have microscopic peritoneal spread (positive cytologic results in 5.7% of cases or microscopic involvement of the omentum or peritoneal-biopsy specimen in 1.7% of cases) or appendiceal spread (metastasis in 1.1% of cases), but peritoneal or appendiceal spread remains a rare event as compared with disease spread in other epithelial subtypes (Table S2 in the Supplementary Appendix).<sup>42,43</sup>

The rate of nodal spread is very low in cases of apparent stage I mucinous ovarian cancer (<2%).<sup>44,45</sup> However, the higher rate of nodal involvement in stage I infiltrative mucinous ovarian cancer (17 to 30%) suggests that pelvic and paraaortic lymphadenectomy should be proposed for all patients with infiltrative disease, regardless of stage, but can be safely omitted for patients with stage I expansile disease.<sup>37,42</sup>

# MANAGEMENT OF STAGE III OR IV MUCINOUS OVARIAN CANCER

The prognosis for women with stage III or IV mucinous ovarian cancer is poorer than the prognosis for women with other, more common subtypes (particularly serous or endometrioid ovarian cancer) and may be related to a poorer response to chemotherapy (Table S3 in the Supplementary Appendix). 11,16,30,46-48 Some authors have argued that this poor prognosis is due to the inherently aggressive biology of the tumor and the questionable technical feasibility of complete resection, raising doubts regarding the usefulness of an aggressive debulking surgery in women with stage III or IV mucinous ovarian cancer.<sup>13</sup> Conversely, in a series involving 50 patients with stage III or IV mucinous ovarian cancer, overall survival was increased by a factor of 3.8 among patients who underwent optimal debulking surgery.<sup>47</sup> Finally, in an analysis of three randomized trials involving 3126 patients (147 with mucinous ovarian cancer), the size of the residual disease was shown to significantly affect overall and event-free survival in a multivariate analysis of data for patients with mucinous ovarian cancer.49 In conclusion, debulking surgery with the objective of a macroscopically complete resection remains a cornerstone of management for advanced mucinous ovarian cancer.

### MEDICAL MANAGEMENT

The prognosis for women with mucinous ovarian cancer depends on the stage of disease. <sup>13,49</sup> Overall survival is higher for the majority of patients presenting with stage I disease than for those with nonmucinous histologic subtypes (hazard ratio, 0.52; 95% confidence interval [CI], 0.30 to 0.92). However, the trend is the inverse for women with stage III or IV mucinous ovarian cancer, who have significantly lower overall sur-

vival than women with nonmucinous histologic subtypes (hazard ratio, 2.81; 95% CI, 2.47 to 3.21).<sup>50</sup> Retrospective series have confirmed lower response rates to first-line platinum-based chemotherapy (mainly carboplatin and paclitaxel) among women with mucinous ovarian cancer (13 to 60%) than among women with serous ovarian cancer (64 to 87%) (Table S3 in the Supplementary Appendix).<sup>11,16,30,46-48,50</sup>

Given the histologic similarities between primary mucinous ovarian cancer and gastrointestinal carcinomas and the in vitro synergy between oxaliplatin and fluorouracil in preclinical models of mucinous ovarian cancer, empirical use of chemotherapeutic regimens that are traditionally used for gastrointestinal cancers has been tested.<sup>51,52</sup> Gynecologic Oncology Group trial 0241 (involving European, Australian, Korean, and North American groups) was designed to study the activity of a colorectal cancer regimen in women with newly diagnosed metastatic mucinous ovarian cancer. A phase 3 trial randomly assigned women to receive treatment with either paclitaxel and carboplatin (control group) or the combination of capecitabine and oxaliplatin.31 In addition, there was a secondary randomization in which women were assigned to receive bevacizumab or placebo in order to test the activity of antiangiogenesis therapy. The trial had slow accrual and was closed prematurely. Preliminary results based on the small group of patients (50) who underwent randomization showed no significant difference in progression-free survival among the treatment groups and confirmed a low objective response rate (10 of the 50 women, or 20%, had a response), regardless of the treatment regimen.31

Neoadjuvant treatment for advanced ovarian cancer has been tested in the European Organization for Research and Treatment of Cancer (EORTC) 55971 and CHORUS trials. The studies compared initial surgery with a strategy of neoadjuvant chemotherapy.<sup>53,54</sup> Patients with mucinous cancers accounted for only 1 to 3% of the patients, making it impossible to draw any conclusions.

There is a dearth of data from randomized clinical trials evaluating adjuvant chemotherapy in early-stage mucinous ovarian cancer. Various national and international guidelines provide statements about indications for adjuvant chemotherapy to help guide physicians, but these statements are not based on clear evidence of a benefit. The National Comprehensive Cancer Network (NCCN) guidelines recommend surgery alone for stage IA or IB mucinous ovarian cancer and adjuvant platinum-based chemotherapy (carboplatin and paclitaxel, or oxaliplatin with fluorouracil or capecitabine) for stage II or more advanced disease. In the case of stage IC mucinous ovarian cancer, the NCCN guidelines recommend either observation or adjuvant chemotherapy (www.nccn.org/patients/guidelines/ovarian/index .html#69/z).

Given the previously mentioned retrospective studies supporting the prognostic information provided by the growth pattern, other European guidelines have further refined treatment recommendations for stage I mucinous ovarian cancer according to the expansile versus infiltrative subtype (Fig. 2). For stage IA or IB expansile mucinous ovarian cancer, which is considered to be low risk, observation alone is recommended, whereas adjuvant chemotherapy is discussed for stage IC expansile mucinous ovarian cancer and is proposed for most cases of stage I infiltrative mucinous ovarian cancer, thus further underscoring the essential role of high-quality pathological review in the management of these rare tumors (www.ovaire-rare.org/TMRG/medecin/ adenocarcinome\_mucineux.aspx) (Fig. 2C).55

## MOLECULAR LANDSCAPE OF MUCINOUS OVARIAN CANCER AND THERAPEUTIC OPPORTUNITIES

Serous ovarian cancers lack genomic alterations in typically actionable driver oncogenes such as HER2, EGFR, ALK, and BRAF but are characterized by defects in homologous recombination DNArepair genes, such as BRCA1 or BRCA2. This deficiency in homologous recombination has been successfully exploited with the use of poly(adenosine diphosphate-ribose) polymerase (PARP) inhibitors. This drug class represents the first targeted therapy with a demonstrated clinical benefit for women who have relapsed high-grade ovarian cancer. Mucinous ovarian cancers are not associated with BRCA mutations or defects in homologous recombination, making them unlikely to benefit from PARP inhibitors. However, they frequently display mutations or amplifications that might be targetable. The most frequent alterations are KRAS mutations (in 40 to

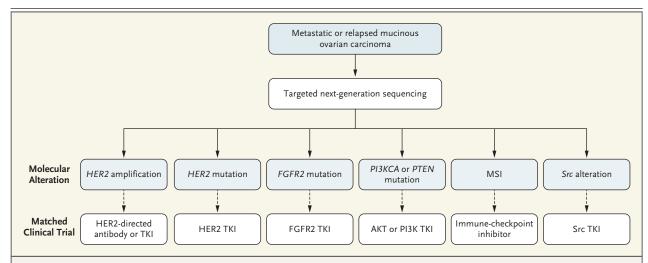

Figure 3. Proposed Individualized Investigational Approach to the Treatment of Metastatic or Relapsed Mucinous Ovarian Carcinoma. For patients with mucinous ovarian carcinoma that has metastasized or relapsed, molecular alterations identified by means of next-generation sequencing can be used to select matched treatments under investigation in clinical trials. FGFR2 denotes fibroblast growth factor receptor 2, HER2 human epidermal growth factor receptor 2, MSI microsatellite instability, PI3K phosphatidylinositol 3-kinase, and TKI tyrosine kinase inhibitor.

65% of cases), *c-MYC* amplifications (in 65%), HER2 amplifications (in 20 to 38%), and TP53 mutations (in 50 to 75%). In addition, other alterations have been identified at lower frequencies, such as homozygous deletions in *CDKN2A/B* (in 25% of cases), mutations in *PI3KCA* (in 13%), and mutations in *PTEN*, *BRAF*, *FGFR*, *KIT*, or *STK11* (in 2 to 5%).<sup>23,24,56-60</sup>

These genomic profiling studies allow mucinous ovarian cancers to be grouped into therapeutically relevant subsets (Fig. 3). For example, KRAS mutations and HER2 amplifications tend to be mutually exclusive. 23,60 The subset of HER2 (human epidermal growth factor receptor 2)positive tumors with wild-type KRAS may be particularly suited to HER2-directed therapies such as trastuzumab. Anecdotal objective responses have been described in case reports of patients with metastatic, HER2-amplified, mucinous ovarian cancer treated with either trastuzumab alone or trastuzumab combined with the oral tyrosine kinase inhibitor lapatinib.61,62 The identification of HER2 or HER3 mutations in an additional 2 to 12% of patients could justify the inclusion of such patients in basket trials of HER inhibitors.23,58

EGFR amplification or mutations in BRAF, FGFR, or STK11 have been detected in HER2-negative tumors with wild-type KRAS, suggesting that

these tumors may be responsive to inhibitors of EGFR (epidermal growth factor receptor), BRAF, FGFR2 (fibroblast growth factor receptor), or mTOR (mammalian target of rapamycin), respectively. The absence of a KRAS mutation identifies a subset of patients with colorectal cancer who are more likely to benefit from the EGFR-inhibiting antibody, cetuximab. Preclinical studies have shown that cetuximab inhibits proliferation in mucinous ovarian cancer cell lines with wild-type KRAS and in a single in vivo model, whereas it has no antitumor effect in a model of KRAS-mutated mucinous ovarian cancer.<sup>63</sup>

Most mutations in the PI3K (phosphatidylinositol 3-kinase) pathway occur with a KRAS mutation, and preclinical studies have shown synergy between MEK (mitogen-activated protein kinase) and PI3K inhibition in mucinous ovarian cancer cell lines with KRAS mutations. <sup>64</sup> Although the number of patients was small, a phase 1 trial of molecularly guided therapies for rare subtypes of ovarian cancer showed encouraging objective responses to combined MEK and PI3K inhibition in patients with KRAS-mutated ovarian cancer. <sup>65</sup>

TP53 mutations are detected at a remarkably high frequency in mucinous ovarian cancer (in 50 to 75% of cases).<sup>23,66</sup> APR-246 is a small molecule designed to restore wild-type p53 function, whereas the WEE1 inhibitor, AZD1775, abrogates

the G2-M cell-cycle checkpoint, selectively sensitizing p53-deficient cells to DNA-damaging agents.<sup>67</sup> Both agents are being investigated in

clinical trials of TP53-mutated tumors.

Finally, defects in the mismatch-repair pathway of DNA repair that result in a tumor with microsatellite instability have been detected in 15 to 20% of patients with mucinous ovarian cancer. Given that tumors with microsatellite instability have high mutation burdens and dense immune infiltrates that are characteristic of other tumor types that respond to immune-checkpoint inhibition, enthusiasm is high for testing inhibitors of PD-1 (programmed death 1) or PD-L1 (programmed death ligand 1) in the subset of mucinous ovarian cancers with microsatellite instability. The subscript of the patients of th

#### FUTURE DIRECTIONS

Important questions remain regarding the management of high-risk, localized mucinous ovarian cancer (stage I infiltrative subtype or stage IC expansile subtype). What are the criteria for selecting patients with high-risk stage I disease for adjuvant treatment? What is an ideal cytotoxic regimen? Will therapy that has some activity against gastrointestinal tumors have meaningful activity against mucinous ovarian cancer? In the future, targeted therapy may be worth testing in patients who have mucinous ovarian cancer with selected genetic alterations such as HER2 muta-

tions or microsatellite instability (Fig. 3).<sup>72,73</sup> The rarity of the tumor mandates international collaboration to evaluate new therapies in a timely fashion

In line with these questions, the Fifth Ovarian Cancer Consensus Conference of the Gynecologic Cancer InterGroup identified four key areas for further research in mucinous ovarian cancer: improvement in the histologic criteria for diagnosis, definition of the optimal surgical and medical approaches to the management of highrisk localized disease, identification of an active cytotoxic regimen, and enrollment of patients in clinical trials of new therapeutics.<sup>74</sup>

### UNITED STATES DISTRICT COURT

### DISTRICT OF SOUTH DAKOTA

### SOUTHERN DIVISION

DEANE BERG,	) CIV. 09-4179-KES
Plaintiff,	)
vs.	) MEMORANDUM OPINION ) AND ORDER
JOHNSON & JOHNSON;	)
JOHNSON & JOHNSON	)
CONSUMER COMPANIES, INC.;	)
LUZENAC AMERICA, INC.;	)
JOHN DOES/JANE DOES 1-30;	)
UNKNOWN BUSINESSES	
AND/OR CORPORATIONS A-Z,	)
	)
Defendants.	)

Defendants Johnson & Johnson and Johnson & Johnson Consumer Companies, Inc. move for summary judgment on all of plaintiff's claims (Docket 149) and also move to exclude the testimony of four of plaintiff's experts (Dockets 140, 143, 145, and 147). Defendant Luzenac America, Inc. joins in the motions (Dockets 151, 153, 155, 156, and 157). For the following reasons, defendants' motions to exclude are granted in part and denied in part.

Defendants' motion for summary judgment is denied.

### **FACTUAL BACKGROUND**

Berg was diagnosed with ovarian cancer in December of 2006. She was 49 years old at the time. Prior to her diagnosis, Berg used Johnson & Johnson products—Johnson's Baby Powder and Shower to Shower—to dust her

perineum for feminine hygiene purposes. She applied the products on a daily basis from 1975 until 2007.

Talc is one of the main ingredients in Johnson's Baby Powder and Shower to Shower. Talc is a naturally occurring mineral that is mined from the ground and used in various applications. Luzenac supplies talc to Johnson & Johnson.

Research has been ongoing studying how talc affects the female reproductive system for a number of years. For example, Dr. Daniel Cramer, one of Berg's proposed experts, published a study in 1982 that found that an association existed between the application of talc to a woman's genital area and the development of ovarian cancer. Defendants stayed current on the various studies that analyzed any potential hazards associated with talc.

Berg alleges that her application of talc to her perineum caused her ovarian cancer and brought this product liability action against defendants because their products did not include any warnings regarding the possible hazards of applying talc to a woman's perineum. Berg has identified four expert opinions in support of her claims.

First, Dr. Cramer is an epidemiologist and is prepared to testify that talc use in the genital area has a strong causal association with ovarian cancer. Further, Dr. Cramer's opinion is that Berg's frequent application of talc to her genital area was "the major cause of her invasive serous ovarian cancer[.]" Docket 148-1 at 18.

Second, Dr. Gary Rosenthal is a toxicologist and is prepared to testify about talc's immunotoxic potential and how such potential relates to ovarian cancer. His opinion is that Berg's frequent talc use "played a role in disease processes leading to her ovarian cancer." Docket 144-1 at 11.

Third, Dr. John Godleski is an expert in microscopy, and he examined tissues taken from Berg's reproductive system following her diagnosis of ovarian cancer. He is prepared to testify that talc particles were present in Berg's tissues.

Fourth, Dr. David R. Lenorovitz and Dr. Edward E. Karnes are experts in the field of forensic human factors and warnings. Their designation as experts is to: (1) ascertain if talc posed a hazard to the populace; (2) ascertain if any such hazard was open and obvious to a reasonable user; (3) determine if there was a feasible way to place a warning on the talc product; and (4) determine if there was a financially and technically reasonable alternative to talc. Docket 173 at 2.

### MOTIONS TO EXCLUDE EXPERT TESTIMONY

In this diversity action, federal law governs whether expert testimony is admissible. *Wagner v. Hesston Corp.*, 450 F.3d 756, 760 (8th Cir. 2006). Rule 702 of the Federal Rules of Evidence governs the admissibility of expert testimony. *Russell v. Whirlpool Corp.*, 702 F.3d 450, 456 (8th Cir. 2012). The rule provides:

If scientific, technical, or other specialized knowledge will assist the trier of fact to understand the evidence or to determine a fact in issue, a witness qualified as an expert by knowledge, skill,

experience, training, or education, may testify thereto in the form of an opinion or otherwise, if (1) the testimony is based upon sufficient facts or data, (2) the testimony is the product of reliable principles and methods, and (3) the witness has applied the principles and methods reliably to the facts of the case.

Fed. R. Evid. 702. In applying Rule 702, the trial judge becomes a "gatekeeper" who screens evidence to ensure its reliability and relevance. *Russell*, 702 F.3d at 456. "The rule clearly is one of admissibility rather than exclusion." *Sappington v. Skyjack, Inc.*, 512 F.3d 440, 448 (8th Cir. 2008). An expert's opinion should be excluded "only if it is so fundamentally unsupported that it can offer no assistance to the jury." *Id.* 

The district court applies a three-part test when screening proposed testimony for experts under Rule 702:

First, evidence based on scientific, technical, or other specialized knowledge must be useful to the finder of fact in deciding the ultimate issue of fact. This is the basic rule of relevancy. Second, the proposed witness must be qualified to assist the finder of fact. Third, the proposed evidence must be reliable or trustworthy in an evidentiary sense, so that, if the finder of fact accepts it as true, it provides the assistance the finder of fact requires.

Lauzon v. Senco Prods., Inc., 270 F.3d 681, 686 (8th Cir. 2001). To satisfy the reliability requirement, the party offering the expert testimony must show by a preponderance of the evidence "that the methodology underlying [the expert's] conclusions is scientifically valid." Barrett v. Rhodia, Inc., 606 F.3d 975, 980 (8th Cir. 2010). In making the reliability determination, the court may consider: (1) whether the theory or technique can be or has been tested; (2) whether the

theory or technique has been subjected to peer review or publication; (3) whether the theory or technique has a known or potential error rate and standards controlling the technique's operations; and (4) whether the theory or technique is generally accepted in the scientific community. *Russell*, 702 F.3d at 456. Additional factors to consider include: "whether the expertise was developed for litigation or naturally flowed from the expert's research; whether the proposed expert ruled out other alterative explanations; and whether the proposed expert sufficiently connected the proposed testimony with the facts of the case." *Polski v. Quigley Corp.*, 538 F.3d 836, 839 (8th Cir. 2008). "This evidentiary inquiry is meant to be flexible and fact specific, and a court should use, adapt, or reject" these factors as the particular case demands. *Russell*, 702 F.3d at 456.

When making this inquiry, the court should focus on "principles and methodology, not on the conclusions that they generate." *Kuhn v. Wyeth, Inc.*, 686 F.3d 618, 625 (8th Cir. 2012) (citing *Daubert v. Merrell Dow Pharm., Inc.*, 509 U.S. 579, 595 (1993)). At times, conclusions and methodology are not entirely distinct from one another, and the court "need not completely pretermit judicial consideration of an expert's conclusions." *Id.* With these principles in mind, the court will now address defendants' motions to exclude expert testimony.

### I. Dr. Daniel Cramer

Defendants' sole argument in support of their motion to exclude

Dr. Cramer's testimony goes to the issue of whether his testimony is reliable.

Defendants attack Dr. Cramer's testimony regarding both specific causation and general causation, arguing that the testimony put forth to support each is not reliable. For purposes of defendants' motion to exclude Dr. Cramer's testimony, the court only considers whether the testimony is admissible and does not consider whether it is sufficient to prove an element in plaintiff's case.

Daubert, 509 U.S. at 596 (noting the difference between admissibility and sufficiency).

Dr. Cramer is the Professor of Obstetrics, Gynecology, and Reproductive Biology at Harvard Medical School and is a practicing obstetrician and gynecologist. He has a doctorate degree in epidemiology from the Harvard School of Public Health.

Dr. Cramer's expert report relies on epidemiology<sup>3</sup> to address two issues:

(1) "the association between use of cosmetic talc powders in the genital area and

<sup>&</sup>lt;sup>1</sup> It appears to be undisputed that Dr. Cramer is qualified to give expert testimony and that his testimony is relevant.

<sup>&</sup>lt;sup>2</sup> Sufficiency is addressed in the portion of this order dealing with defendants' motion for summary judgment.

<sup>&</sup>lt;sup>3</sup> Epidemiology is the "field of public health and medicine that studies the incidence, distribution, and etiology of disease in human populations." <u>Reference Manual on Scientific Evidence</u> 551 (3d ed. 2011), *available at* 2011 WL 7724261, \*2.

ovarian cancer with regard to the likelihood that this is cause-and-effect" and (2) "the possible relevance of talc use to the occurrence of ovarian cancer in the specific case of Ms. Deane Berg[.]" Docket 148-1 at 3. The report concludes by opining that (1) there is a causal association between the use of talc and ovarian cancer, and (2) chronic talc use was the major cause of Berg's invasive serous ovarian cancer. *Id.* at 18.

Defendants make two arguments in support of their motion to exclude Dr. Cramer's testimony. First, they argue that Dr. Cramer's report is inadmissible because it fails to rule out alternative causes of Berg's cancer. Second, they argue that Dr. Cramer's report is inadmissible because the odds ratios established in the report and Dr. Cramer's interpretations of those odds ratios stem from unreliable methods.

### A. Ruling Out Alternative Causes

Defendants argue that Dr. Cramer's methodology is not reliable because he fails to rule out alternative causes of Berg's cancer. Defendants rely on these four Eighth Circuit Court of Appeals opinions to support their proposition that Dr. Cramer was required to rule out alternative causes of Berg's cancer:

Barrett, 606 F.3d 975; Bland v. Verizon Wireless, (VAW) L.L.C., 538 F.3d 893 (8th

<sup>&</sup>lt;sup>4</sup> Defendants argue extensively in their briefs that Dr. Cramer's testimony fails to establish either specific or general causation. Such arguments go to the sufficiency of Dr. Cramer's testimony and not the admissibility of it. Because a motion to exclude expert testimony is concerned only with admissibility, these arguments will not be addressed in this part of the order.

Cir. 2008); *Marmo v. Tyson Fresh Meats, Inc.*, 457 F.3d 748 (8th Cir. 2006); and *Turner v. Iowa Fire Equip. Co.*, 229 F.3d 1202 (8th Cir. 2000). None of these cases, however, require an epidemiologist to rule out all alternative causes in order for his testimony to be admissible.

In *Barrett*, the Eighth Circuit found that the district court did not abuse its discretion when it limited the expert testimony of a toxicologist and a treating physician. 606 F.3d at 981-82. The toxicologist conceded that she lacked "significant scientific knowledge underpinning [her] opinion and that she did not rule out alternative causes of [plaintiff's] injury. . . . Her opinion . . . was admittedly based on assumption, without any scientific testing or exposure analysis." *Id.* at 981. The treating physician was not allowed to testify about the cause of the plaintiff's toxic exposure because he "assumed that [plaintiff] had been injured by hydrogen sulfide gas exposure without any scientific verification and without considering any alternative causes." *Id.* at 982. Neither expert witness was offering epidemiologic evidence. Both experts had glaring deficiencies in their opinions because they failed to do any scientific verifications, relied on unsupported assumptions, and did not consider alternative causes.

In *Bland*, the Eighth Circuit found that the district court did not abuse its discretion by excluding a treating physician's expert testimony. 538 F.3d at 897-98. The treating physician intended to testify about the differential

diagnoses that he conducted. *Id.* at 897. "A differential diagnosis is a technique that identifies the cause of a medical condition by eliminating the likely causes until the most probable cause is isolated." *Bland*, 538 F.3d at 897. The treating physician's differential diagnosis was inadmissible because he failed to eliminate other possible causes. *Id.* The very nature of a differential diagnosis requires a consideration and elimination of other possible causes. By failing to consider other causes, a differential diagnosis cannot, by definition, be reliable. Thus, *Bland* stands for the proposition that an admissible differential diagnosis requires the expert to consider and eliminate other possible causes. *Bland* does not stand for the proposition that an expert offering epidemiologic evidence must rule out all other possible causes for his testimony to be admissible.

In *Marmo*, the Eighth Circuit found that the district court acted within the bounds of discretion when it precluded a toxicologist from testifying. 457 F.3d at 758. The toxicologist did not examine the plaintiff, did not inquire about other toxic exposures, did not exclude confounding factors, and "admitted that the causation standard she employed was not subject to expression in terms of a potential rate of error and was a much lower standard than medical causation." *Id. Marmo* does not support defendants' proposition that an expert offering epidemiologic evidence must rule out all other possible causes for his testimony to be admissible.

Lastly, in *Turner* the Eighth Circuit concluded that the district court did not abuse its discretion by excluding a treating physician's expert opinion. 229 F.3d at 1208-09. Just as in *Bland*, the treating physician's opinion was based on a differential diagnosis in which he "admitted that he made no attempt to consider all the possible causes, or to exclude each potential cause until only one remained, or to consider which of two or more non-excludable causes was the more likely to have caused the condition." *Id.* at 1208. Again, failing to properly administer a differential diagnosis resulted in an inadmissable differential diagnosis. But *Turner* does not require that an epidemiologist perform a differential diagnosis, which would require consideration of other possible causes.

After a review of these cases, the appropriate legal proposition created from these opinions is that an expert witness who performs a differential diagnosis must consider all other possible causes and exclude each potential cause until only one remains, or consider which of two or more non-excluded potential causes was the more likely to have caused the condition. Dr. Cramer, however, does not claim to have performed a differential diagnosis. Indeed, his testimony is based on epidemiology. Moreover, Dr. Cramer's report indicates that he did in fact consider other possible causes of Berg's cancer. Therefore, Dr. Cramer's opinion will not be excluded on the basis that he failed to rule out all alternative causes. *See In re Prempro Prod. Liab. Litiq.*, 586 F.3d 547, 566 (8th

Cir. 2009) (noting that an expert's "explanations as to conclusions not ruled out went to weight and not admissibility").

### B. Dr. Cramer's Methodology

Defendants' second argument goes to the general methodology applied by Dr. Cramer. In his expert report, Dr. Cramer notes that, in general, there is an odds ratio<sup>5</sup> of 1.33 between perineal talc use and ovarian cancer. Dr. Cramer further asserts that a woman with Berg's characteristics has an odds ratio of 3.53. Defendants argue that the 3.53 odds ratio established in Dr. Cramer's report comes from unreliable methods. The court begins its analysis by addressing defendants' specific concerns with Dr. Cramer's findings and then moves to a more general examination of the methodology employed by Dr. Cramer.

First, defendants claim Dr. Cramer's testimony is unreliable because it conflicts with existing scientific literature that shows the appropriate odds ratio is more in line with the 1.33 figure that Dr. Cramer generated. But there is "no requirement that published epidemiological studies supporting an expert's opinion exist in order for the opinion to be admissible." *Bonner v. ISP Tech., Inc.,* 

<sup>&</sup>lt;sup>5</sup> An odds ratio "expresses in quantitative terms the association between exposure to an agent and a disease." <u>Reference Manual on Scientific Evidence</u> 568 (3d ed. 2011), *available at* 2011 WL 7724261, \*10-\*11. Typically, if the odds ratio equals 1.0, the risk in exposed individuals is the same as the risk in unexposed individuals. *Id.* at 567. The greater the odds ratio the greater the risk in exposed individuals. *Id.* For example, an odds ratio of 4.0 indicates that the risk of disease in the exposed group is four times as high as the risk of disease in the unexposed group. *Id.* 

259 F.3d 924, 929 (8th Cir. 2001). Dr. Cramer's testimony will be admitted so long as his methodology is reliable even if his conclusions are novel. *See id.* ("The district court could not exclude scientific testimony simply because the conclusion was 'novel' if the methodology and the application of the methodology were reliable.").

Second, defendants argue that the testimony is unreliable because he "cherry-picked" data in order to form an opinion solely for purposes of litigation. "That an expert testifies based on research he has conducted independent of litigation provides important, objective proof that the research comports with the dictates of good science." Lauzon, 270 F.3d at 692. Dr. Cramer has been studying the association between talc use and ovarian cancer since at least 1982. He has published several articles on the subject over the past 30 years. While it is true that his specific findings relevant to this case were generated during the course of litigation, the methods he employed in reaching his conclusions are very similar to the methods used in his previous research. Indeed, the data he used to generate the odds ratios came mostly from his past research. The only difference between his past and present research seems to exist in how he categorized his data. Defendants label this "cherry-picking." The court views it as simply looking at the existing data from a different perspective. Therefore, the court concludes that although Dr. Cramer's opinion was

developed during the course of this litigation, the opinion "naturally flowed from [his] research." *Polski*, 538 F.3d at 839.

Third, defendants assert that the testimony is unreliable because Dr. Cramer's conclusions conflict with his non-litigation research and also conflict internally. If Dr. Cramer's previous, or even present, research contradicts his testimony in this case, certainly defendants can challenge his credibility during cross-examination. *See Kuhn*, 686 F.3d at 627 (noting that when an expert offers testimony that conflicts with his opinion, the appropriate response from the court is to allow the opposing party to challenge the credibility of the expert). But unless his methodology is unreliable, the court will not preclude his testimony.

Defendants also identify alleged inconsistencies in Dr. Cramer's findings (i.e., noting a protective effect for limited talc application). Again, this is a criticism of Dr. Cramer's results, not his methodology. Defendants will have the chance at trial during cross examination to attack his results.

The court will now analyze Dr. Cramer's methodology from a broader perspective under the seven factors articulated by the Eighth Circuit in *Polski* 

<sup>&</sup>lt;sup>6</sup> Additionally, Dr. Cramer testified that he is attempting to get his latest findings published in a scientific journal. This is important because it shows that Dr. Cramer has a stake in his findings independent from this litigation. Suspicions would arise if an expert were to propose testimony for litigation and then refuse to stand behind those findings in the scientific community. That is not the case here.

and previously set forth herein, while also addressing additional issues raised by defendants.<sup>7</sup>

As indicated in his report, Dr. Cramer performed a case-control study<sup>8</sup> to generate his final conclusions. A case-control study is commonplace in the field of epidemiology. According to Dr. Cramer, there have been nineteen *published* case-control studies addressing the talc and ovarian cancer association since 1982.<sup>9</sup> Docket 148-1 at 5, 20-21. Thus, the technique of using a case-control study to assess the association between talc use and ovarian cancer has been both tested and subjected to peer review.

Defendants are quick to note that Dr. Cramer's *specific findings* have not been tested or peer reviewed, specifically pointing to Dr. Cramer's categorization that allowed for a determination of the "[a]ssociation between genital talc use

<sup>&</sup>lt;sup>7</sup> The court has already discussed whether the expertise was developed for litigation or naturally flowed from the expert's research and found that it weighs in favor of admission. *Polski*, 538 F.3d at 839.

<sup>&</sup>lt;sup>8</sup> "In case-control studies, the researcher begins with a group of individuals who have a disease (cases) and then selects a similar group of individuals who do not have the disease (controls). The researcher then compares the groups in terms of past exposures. If a certain exposure is associated with or caused the disease, a higher proportion of past exposure among the cases than among the controls would be expected." Reference Manual on Scientific Evidence 559 (3d ed. 2011), available at 2011 WL 7724261, \*6.

<sup>&</sup>lt;sup>9</sup> In other words, the technique of using a case-control study to analyze the association between talc use and genital cancer is generally accepted in the scientific community, even if the results of Dr. Cramer's specific study are outliers.

and ovarian cancer among non-Jewish serous invasive cases and controls without a family history of ovarian or early onset breast cancer, stratified by menopausal status." Docket 148-1 at 17. This is mostly an attack on the results and not the methodology, and as a result goes to the weight to be given to the evidence and not its admissibility. Even if one were to consider defendants' argument an attack on Dr. Cramer's methodology, their argument is unpersuasive. First, although Dr. Cramer's specific categorization has not been tested, there is no reason why testing cannot occur using either Dr. Cramer's data or alternative data. Second, as discussed above, Dr. Cramer is in the process of getting his findings published. Third, and perhaps most important, Dr. Cramer's categorization was his attempt to connect his research with the facts of the case. His technique makes sense under the facts of this case because it shows the odds ratio of a woman in Berg's position.

Defendants criticize Dr. Cramer's choice to exclude menopausal, non-Jewish women who do not have a history of ovarian or early onset breast cancer. But as Dr. Cramer explains, this decision was made because Berg is not Jewish, was premenopausal at the time of her diagnosis, and did not have a history of ovarian or early onset breast cancer.

Moreover, Dr. Cramer's categorization is also a recognition of alternative causes of ovarian cancer. As Dr. Cramer points out in his report, women who are Jewish or have a history of breast or ovarian cancer are at an increased risk

for ovarian cancer. Berg is neither Jewish nor has a history, family or personal, of breast or ovarian cancer. Additionally, she tested negative for the full panel of BRCA1 and BRCA2 mutations—additional factors that increase one's risk for ovarian cancer.

Lastly, defendants argue that Dr. Cramer's theory of biological plausibility<sup>10</sup> is unreliable, making his ultimate conclusions equally as unreliable. Dr. Cramer's two models of biological plausibility. One model relies on the assertion that talc induces inflammation, down regulates immunity, and enhances ovarian tumor development. The second model theorizes that talc's inflammatory properties lead to dysregulation of immunity that would otherwise help suppress cancerous cells. Defendants assert that neither of these models has been proven. But defendants have not shown that either model is undoubtedly incorrect. In epidemiology, the "saliency of [biological plausibility] varies depending on the extent of scientific knowledge about the cellular and subcellular mechanisms through which the disease process works." Reference

Manual on Scientific Evidence 605 (3d ed. 2011), available at 2011 WL

7724261, \*30. At times, "mechanism explanations are merely
hypothesized—although hypotheses are sometimes accepted" in showing

<sup>&</sup>lt;sup>10</sup> Biological plausibility is the "[c]onsideration of existing knowledge about human biology and disease pathology to provide a judgment about the plausibility that an agent causes a disease." <u>Reference Manual on Scientific Evidence</u> 620 (3d ed. 2011), *available at* 2011 WL 7724261, \*38.

exposure can cause a disease. *Id.* Furthermore, Berg's toxicologist expert, Dr. Rosenthal, is prepared to offer additional support for Dr. Cramer's models of biological plausibility. Thus, Dr. Cramer's biological plausibility models are not so fundamentally unsupported that they fail to assist the jury. *Sappington*, 512 F.3d at 448.

After a careful review of the record, the court concludes that Dr. Cramer's expert testimony is reliable. Defendants can certainly attack his testimony at trial. *See Kuhn*, 686 F.3d at 625 ("Vigorous cross examination, presentation of contrary evidence, and careful instruction on the burden of proof are the traditional and appropriate means of attacking shaky but admissible evidence."). But his testimony will not be precluded based on the arguments that defendants put forward.

### II. Dr. Gary Rosenthal

Dr. Rosenthal is prepared to offer expert testimony on the issue of "whether talc can be considered an immunotoxic<sup>11</sup> agent and the relevance of this to the biological plausibility of talc as an agent capable of causing ovarian cancer." Docket 144-1 at 3. Defendants argue that Dr. Rosenthal is not qualified to offer his expert opinion and that his opinion is unreliable.<sup>12</sup>

<sup>&</sup>lt;sup>11</sup> Immunotoxicology is a "branch of toxicology concerned with the effects of toxic agents on the immune system." <u>Reference Manual on Scientific</u> Evidence 682 (3d ed. 2011), *available at* 2011 WL 7724262, \*27.

<sup>&</sup>lt;sup>12</sup> The court assumes, for purposes of this motion, that Dr. Rosenthal's testimony is relevant.

### A. Qualifications

"A witness can be qualified as an expert by knowledge, skill, experience, training or education, and it is the responsibility of the trial judge to determine whether a particular expert has sufficient specialized knowledge to assist jurors in deciding the specific issues in this case." Wheeling Pittsburgh Steel Corp. v. Beelman River Terminals, Inc., 254 F.3d 706, 715 (8th Cir. 2011) (internal quotations omitted). "The relative skill or knowledge of an expert goes to the weight of that witness's testimony, not its admissibility." Loudermill v. Dow Chemical Co., 863 F.2d 566, 569 (8th Cir. 1988).

Dr. Rosenthal received his Ph.D. in environmental medicine from New York University. He has been certified as a toxicologist by the American Board of Toxicology since 1990. His research includes the study of the toxicity of various agents on the immune system, including mineral dusts. He has also studied causative and preventative measures of inflammation and cancer.

Defendants argue that because Dr. Rosenthal has no experience specifically with talc or ovarian cancer, he is not qualified. Such a narrow view of an expert's qualifications is not required under Rule 702. "Rule 702 only requires that an expert possess knowledge, skill, experience, training, or education sufficient to 'assist' the trier of fact, which is satisfied where expert testimony advances the trier of fact's understanding to any degree." *Robinson v. GEICO Gen. Ins. Co.*, 447 F.3d 1096, 1100 (8th Cir. 2006) (internal quotations

omitted). Dr. Rosenthal has experience studying the toxicity of mineral dust on the immune system. His expert testimony addresses whether talc can be considered an immunotoxic agent. Further, Dr. Rosenthal has experience studying the causative and preventative measures of inflammation and cancer. His expert testimony also addresses the biological plausibility of talc as an agent capable of causing ovarian cancer. Thus, the court finds that Dr. Rosenthal's qualifications are sufficient to assist the trier of fact in deciding the issues in this case.

### B. Reliability

Dr. Rosenthal's expert report offers the following conclusions: (1) talc has immunotoxic<sup>13</sup> potential; (2) it is biologically plausible that talc-mediated neoplastic events<sup>14</sup> can be evoked through various mechanisms; (3) talc can translocate from the vagina, cervix, or fallopian tube to the ovary; (4) it is biologically plausible that Berg's daily talc use for over 30 years led to chronic inflammation in target tissues; (5) neoplastic events related to chronic inflammation and/or immune modulation would likely have been elicited in

<sup>&</sup>lt;sup>13</sup> Immunotoxic means that the agent in question exerts toxicity toward the immune system or its components.

<sup>&</sup>lt;sup>14</sup> A neoplastic event is a pathologic process that results in the formation and growth of abnormal tissue that grows by cellular proliferation more rapidly than normal and continues to grow after the stimuli that initiated the new growth cease. <u>Stedman's Medical Dictionary</u> 1288 (28th ed. 2006).

Berg; and (6) the foregoing would have played a role in disease processes leading to Berg's ovarian cancer. Docket 144-1 at 11.

Defendants argue that Dr. Rosenthal's biologically plausible opinions are merely speculative, untested, and unreliable. An examination of Dr. Rosenthal's methods is required to determine whether defendants' arguments have merit.

In reaching his conclusions, Dr. Rosenthal first addresses talc's physicochemical aspects. Docket 144-1 at 5. He asserts that talc's "poorly-soluble particulate nature" is significant because it allows talc "to be taken up by cells of the immune system . . . and transported to other parts of the body[.]" *Id.* He notes that talc shares this property with "other members of the mineral dust family, including silicates and asbestos." *Id.* He further notes that "an extensive literature exists showing that similar to asbestos and other mineral dusts, exposure to talc can result in cellular toxicity." *Id.* (citing published studies).

Dr. Rosenthal next addresses the biological evidence that supports his conclusions. He first asserts that the immune consequences of talc being "taken up" by cells "depends on the fate(s) of the cell and the engulfed talc particle." *Id.* at 6. Some fates result in the recruitment of other immune cells (because the body recognizes talc as a foreign particle) while others lead to an injury that

causes unique structures such as Giant cells<sup>15</sup> and granulomas.<sup>16</sup> *Id.* (citing published studies that show Giant cells and granulomas have been seen in response to talc exposure). Alternatively, the talc particle may be taken up by cells through the process of endocytosis.<sup>17</sup> Any of these "fates" may "play some part in the response to mineral dust deposition on mucosal surface and would be associated with measures of inflammation[.]" *Id.* at 7. Dr. Rosenthal notes that several "studies show markers of inflammation following talc exposure, including intravaginal delivery." *Id.* (citing several published articles).

To further support his opinions, Dr. Rosenthal discusses studies that show how talc can affect the immune system. He notes several studies that show talc induces granulomas in a variety of different organs. He then cites an animal study that found talc-induced granulomas resulted in deficient cellular immune functions that "have been noted to precede cancer in man." *Id.* at 7. After discussing additional studies, Dr. Rosenthal generalizes that talc causes

<sup>&</sup>lt;sup>15</sup> Giant cells granuloma is a "nonneoplastic lesion characterized by a proliferation of granulation tissue containing numerous multinucleated giant cells[.]" <u>Stedman's Medical Dictionary</u> 832 (28th ed. 2006).

<sup>&</sup>lt;sup>16</sup> Granuloma is a "[t]erm applied to nodular inflammatory lesions[.]" Stedman's Medical Dictionary 831 (28th ed. 2006). "Granuloma formation is a special type of immune response to foreign agents, where the body produces a collection of immune and related cells in an attempt to wall off a foreign agent that has resisted digestion." Docket 144-1 at 7.

<sup>&</sup>lt;sup>17</sup> Endocytosis is the "[i]nternalization of substances from the extracellular environment through the formation of vesicles formed from the plasma membrane." Stedman's Medical Dictionary 640 (28th ed. 2006).

two biologic responses—immune system suppression and inflammation—both of which have been found to be associated with cancer. *Id.* at 8-10. Moreover, he notes that the "intimate relationship between talc, inflammation, phagocytic cells,<sup>18</sup> and ovary-derived chemotactic factors<sup>19</sup> provides a mechanistic connection for talc translocation to the ovary where it can alter tissue homeostasis." *Id.* at 9.

To summarize, Dr. Rosenthal's report essentially provides that talc particles that are applied in the perineal area can move to the ovaries where they can be problematic for immune cells by causing chronic inflammation and/or immunity suppression. Chronic inflammation and immunity suppression have been shown to play roles in disease processes that lead to cancer. Based on Berg's thirty-plus years of perineal exposure to talc, it is likely that she would have experienced such chronic inflammation and/or immunity suppression in her ovaries, thus playing a "role in disease processes leading to her ovarian cancer." *Id.* at 11. Dr. Rosenthal relied on several published scientific articles as well as his own experience in immunotoxicology to form his conclusions.

<sup>&</sup>lt;sup>18</sup> Phagocytic cells are cells that can ingest bacteria, foreign particles, and other cells. Stedman's Medical Dictionary 1470 (28th ed. 2006).

<sup>&</sup>lt;sup>19</sup> Chemotactic factors are factors that cause movement of cells in response to chemicals, whereby the cells are attracted or repelled by substances exhibiting chemical properties. <u>Stedman's Medical Dictionary</u> 358 (28th ed. 2006).

Defendants attack Dr. Rosenthal's opinion from several perspectives. First, defendants challenge Dr. Rosenthal's comparison of talc with other mineral dusts, arguing that he is not qualified to discuss the relevant properties of the three mineral dusts. The main assertion that Dr. Rosenthal makes, however, is that talc, asbestos, and silica all have poorly-soluble particulate natures that encourage uptake by immune cells. It is this property, he opines, that would cause the three mineral dusts to act similar from an immunotoxicology perspective. See, e.g., Reference Manual on Scientific Evidence 664 (3d ed. 2011) (noting toxicologists often compare the structures of different compounds to infer toxicity). Dr. Rosenthal only relies on one physical property that the three substances share. Defendants urge the court to require Dr. Rosenthal to be an expert on all physicochemical properties of each substance if he is to compare any of them. Such expansive expertise, however, is not required. If defendants have issue with the factual basis for his comparisons, they are welcome to challenge it at trial, but such a challenge goes to the weight to be given to the evidence, not its admissibility. Bonner, 259 F.3d at 929 ("[T]he factual basis of an expert opinion goes to the credibility of the testimony, not the admissibility.").

Second, defendants argue that Dr. Rosenthal's reference to historic accounts of asbestos in cosmetic talc is unreliable. Regardless of its reliability, the court finds this part of Dr. Rosenthal's opinion to be irrelevant. Berg has not

alleged that asbestos was in the talc that allegedly caused her ovarian cancer. Instead, she argues that the talc itself caused her ovarian cancer. Thus, any reference to historic accounts of asbestos in cosmetic talc is irrelevant and is also likely to confuse the jury. As a result, Dr. Rosenthal is precluded from testifying about historic accounts of asbestos in cosmetic talc.

Third, defendants take issue with Dr. Rosenthal's assertions relating to cellular toxicity. The general crux of defendants' arguments deal with the factual basis of the opinion and not the methodology. Further, defendants misinterpret Dr. Rosenthal's opinion. When disputing Dr. Rosenthal's claim that talc causes cellular toxicity, defendants argue that cellular toxicity is a general term not necessarily related to cancer. Nowhere in Dr. Rosenthal's expert report does he make the assertion that all cellular toxicity causes cancer. Thus, defendants' argument lacks merit.

Fourth, defendants argue that Dr. Rosenthal's references to metallic components in talc make his entire opinion unreliable, noting his deposition testimony in which he states that the "combination of these compounds together in the context of talc have not been studied in a detailed way[.]" Docket 144-2 at 14. The court agrees that Dr. Rosenthal's reference that he "would not completely dismiss a potential role for contaminating immunotoxic metals" is an unreliable statement because Dr. Rosenthal did not provide an adequate basis in science to support it. Nevertheless, this statement is a small part of his

report and has little or nothing to do with the rest of his expert opinion. Thus, his references to metallic components do not make his entire opinion unreliable.

Fifth, defendants attack Dr. Rosenthal's efforts to show biologic plausibility. They argue that because Berg's tissues did not indicate that the specific mechanisms that Dr. Rosenthal offered were present, his testimony is irrelevant.<sup>20</sup> The court disagrees and finds that Dr. Rosenthal's offering of mechanisms that provide biologic plausibility to Berg's claim that talc caused her ovarian cancer are relevant.<sup>21</sup>

Sixth, defendants argue that Dr. Rosenthal's opinion should be excluded because of his word choices in his report. The court will not entertain such a meritless objection.

Defendants' seventh challenge is similar to its third. They argue that because one of the mechanisms (TNF-alpha<sup>22</sup>) that Dr. Rosenthal offers has not been conclusively proven to cause cancer, it is unreliable. This again misstates Dr. Rosenthal's report. The report asserts that talc has been shown to cause

<sup>&</sup>lt;sup>20</sup> Defendants' argument goes to the sufficiency of specific causation rather than admissibility. This argument is more properly addressed as part of the motion for summary judgment.

<sup>&</sup>lt;sup>21</sup> If defendants had conclusive proof that the mechanisms were not present, then such testimony would likely be irrelevant.

<sup>&</sup>lt;sup>22</sup> TNF-alpha stands for tumor necrosis alpha, which is a pleiotropic cytokine synthesized widely throughout the female reproductive tract. Stedman's Medical Dictionary 698 (28th ed. 2006).

inflammation through an increase in TNF-alpha. The report does not state that TNF-alpha causes cancer—the basis for defendants' challenge.

Defendants' eighth challenge attacks the factual basis for Dr. Rosenthal's opinion. First, they argue that one of the studies he relied on is a case report. But their citation to *Glastetter v. Novartis Pharmaceuticals Corporation*, 252 F.3d 986 (8th Cir. 2001), is not dispositive. *Glastetter* simply states that "causal attribution based on case studies must be regarded with caution." 252 F.3d at 990. Here, Dr. Rosenthal is not using case studies as the entire foundation for his opinions, but just as one piece of the puzzle. Further, defendants argue that Dr. Rosenthal's admission that there is a scientific debate about whether talc is immunosuppresive precludes his testimony. This admission does not make his opinion unreliable. *See Kuhn*, 686 F.3d at 625 ("Proponents of expert testimony need not demonstrate that the assessments of their experts are correct, and trial courts are not empowered to determine which of several competing scientific theories has the best provenance.") (internal quotation omitted).

Defendants' ninth challenge is not actually a challenge at all. Instead, defendants simply reference various statements made by Dr. Rosenthal in relation to Dr. Cramer's theories.

Tenth, defendants take issue with Dr. Rosenthal's proffer that the immunosuppressive effects of asbestos may contribute to malignancy by decreasing natural killer cells. Dr. Rosenthal offers this statement to support

his conclusion that substances that have immunosuppressive effects play a role in the disease processes leading up to cancer development. He does not assert, as defendants suggest, that talc exposure decreases natural killer cells. Again, defendants' misstatement of Dr. Rosenthal's opinion makes their objection meritless.

Defendants' eleventh challenge shares many of the shortcomings as their previous challenges. Defendants muddle sufficiency with admissibility, arguing that Berg's medical records did not show evidence of inflammation and thus any theory of inflammation is irrelevant. They challenge the factual basis of Dr. Rosenthal's opinion, claiming his interpretation of various animal studies makes his opinion unreliable. Lastly, they take Dr. Rosenthal's reluctance to definitively state that talc exposure causes ovarian cancer to mean that his opinions are speculative and unreliable. Dr. Rosenthal's report, however, does not assert that talc exposure causes ovarian cancer. Instead, Dr. Rosenthal's report states that Berg's talc exposure "would have played a role in disease processes leading to her ovarian cancer." Docket 144-1 at 11.

In summary, the court finds that the majority of defendants' challenges to Dr. Rosenthal's expert testimony are unpersuasive. In making his ultimate conclusions, Dr. Rosenthal relied on his own expertise in the field of toxicology, his past research, and several other published scientific studies. Any gaps or limitations in Dr. Rosenthal's reasoning can be presented to the jury. *See Kuhn*,

686 F.3d at 632 ("The studies' limitations may be presented to the jury, and [the expert's] reliance on the studies may be tested through the traditional means of cross examination and presentation of contrary evidence."). Indeed, "[v]igorous cross-examination, presentation of contrary evidence, and careful instruction on the burden of proof are the traditional and appropriate means of attacking shaky but admissible evidence." *Daubert*, 509 U.S. at 596.

#### III. Dr. John Godleski

Dr. Godleski reviewed histopathological<sup>23</sup> slides taken from Berg following her diagnosis of ovarian cancer using advanced microscopic methodologies. In his review of twenty-six slides, Dr. Godleski found three particles of talc. He asserts that his findings indicate that talc was present in Berg's ovary tumor. Dr. Godleski opines that the talc found in Berg's tissues "is evidence for a causal link between the presence of talc and the development of [her] ovarian cancer." Docket 141-1 at 4.

Defendants argue that Dr. Godleski is unqualified and that his opinions are irrelevant and unreliable.

#### A. Qualifications

Dr. Godleski is the head of Pulmonary Pathology at Brigham and
Women's Hospital, a major teaching hospital of Harvard Medical School. He also

<sup>&</sup>lt;sup>23</sup> Histopathology is the science or study dealing with the cytologic and histologic structure of abnormal or diseased tissue. <u>Stedman's Medical</u> Dictionary 893 (28th ed. 2006).

leads a research group at the Harvard School of Public Health. He earned his medical degree from the University of Pittsburgh School of Medicine where he did research using electron microscopy. He has published more than 140 papers related to pulmonary pathology including a number using analytical electron microscopy. He is a "recognized expert whose opinion is sought by pathologists from other hospitals in the diagnosis of foreign material in tissues throughout the body using scanning electron microscopy and energy dispersive X-ray analyses." Docket 141-1 at 2.

Defendants note that Dr. Godleski's background does not include determining the causes of ovarian cancer. They argue that Dr. Godleski has done limited research on the relationship between talc and ovarian cancer, that his knowledge of the causes of ovarian cancer is limited, and that he is not an epidemiologist. On the other hand, defendants do not dispute that Dr. Godleski is an expert at identifying foreign particles in human tissue. Because his testimony is limited to identifying foreign particles in human tissue, the court finds he is qualified to offer his expert opinion.

#### B. Relevancy

Defendants argue that Dr. Godleski's opinions are irrelevant because he cannot tie the talc particles found in Berg's tissues to defendants' products.

This argument goes to the sufficiency of the testimony, not the relevancy of it.

Berg claims that talc from defendants' products caused her ovarian cancer.

Certainly, testimony that establishes that talc particles were found in Berg's ovary tumor is relevant to this case.

#### C. Reliability

Defendants' reliability arguments are based on a mischaracterization of Dr. Godleski's expert opinion. Their arguments suggest that Dr. Godleski is opining that the talc particles he found caused Berg's ovarian cancer. Dr. Godleski's opinion stops well short of such a conclusion. His report notes that "the talc found in this case is evidence for a causal link between the presence of talc and the development of [Berg's] ovarian cancer." Docket 141-1 at 4. His opinion merely states the obvious: the talc found in Berg's tissues is evidence in this case.

Defendants again argue that Dr. Godleski is required to rule out alternative causes. Because Dr. Godleski is not opining that talc was the cause of Berg's ovarian cancer through a differential diagnosis, he need not rule out other potential causes of her cancer. The fact that he found particles other than talc goes to the sufficiency of his testimony. The remainder of defendants' arguments are based on their mischaracterization of Dr. Godleski's opinions and will not be addressed. Therefore, Dr. Godleski's expert testimony will not be excluded.

#### IV. Dr. David R. Lenorovitz and Dr. Edward E. Karnes

Dr. Lenorovitz and Dr. Karnes are prepared to provide expert testimony "addressing certain forensic human factors and warnings issues."<sup>24</sup> Docket 146-3 at 3. Defendants argue that the expert report goes far beyond the boundaries applicable to human factors experts. In addition, defendants argue that any proposed testimony that is related to human factors is unreliable.

#### A. Qualifications

The court begins its evaluation by addressing the experts' qualifications. Dr. Lenorovitz has 44 years of professional experience as a human factors engineer, ergonomist, and cognitive psychologist. He received his Ph.D. in human factors engineering from the State University of New York and is certified as a professional ergonomist by the Board of Certification in Professional Ergonomics. He has spent the last six years as a forensic human factors consultant with a special emphasis on warnings systems design, development, and warnings adequacy evaluation.

Dr. Karnes has 50 years of professional experience as a human factors professional. He received his Ph.D. in experimental psychology from Temple University and is board-certified. He has served as a human factors consultant for plaintiffs and defendants in several different legal cases. The majority of his

<sup>&</sup>lt;sup>24</sup> According to Berg, forensic human factors and warnings is the "multidisciplinary field examining how humans interact with the world around them." Docket 173 at 1.

research has concerned the development of warnings and user understanding of safety issues associated with the use of consumer and industrial products.

Both experts are qualified to render an expert opinion within their field.

#### B. Defendants' Challenges

Defendants first take issue with any attempt by the experts to offer testimony regarding defendants' intent as well as testimony regarding defendants' purported lobbying efforts. See, e.g., Docket 146-3 at 14 ("The defendants have knowingly decided to ignore the hazard present in their products."); Docket 146-3 at 5 ("The defendants collaborated and joined forces with other 'talc-interested parties' to pool resources and fund . . . programs intended to . . . defeat any research study[.]"). Both Dr. Karnes and Dr. Lenorovitz admit that the basis for their opinions about defendants' intent and lobbying efforts comes from "reading the documents that were provided." Docket 146-2 at 20; 22. "Where the subject matter is within the knowledge or experience of lay people, expert testimony is superfluous." Ellis v. Miller Oil Purchasing Co., 738 F.2d 269, 270 (8th Cir. 1984). There is no reason why the jury cannot review the same documents and form their own opinions about defendants' intent and lobbying efforts. Thus, Drs. Karnes and Lenorovitz are precluded from offering an expert opinion about defendants' intent or lobbying efforts because such testimony would be superfluous.

Next, defendants seek to preclude Drs. Karnes and Lenorovitz from testifying about any legal conclusions, e.g., any duties that defendants owed to Berg. Under South Dakota law, whether a duty exists is a question of law. *Bland v. Davison Cnty*, 507 N.W.2d 80, 81 (S.D. 1993). Any expert testimony on a legal conclusion will not assist the trier of fact and is thus inadmissible. *United States v. Wells*, 63 F.3d 745, 753 (8th Cir. 1995) ("[I]nstruction on the law is the function of the court, not a defense expert."), *rev'd on other grounds*, 519 U.S. 482 (1997); *Peterson v. City of Plymouth*, 60 F.3d 469, 475 (8th Cir. 1995) ("The legal conclusions were for the court to make. It was an abuse of discretion to allow the testimony."). Thus, Drs. Karnes and Lenorovitz are precluded from testifying about any duties or responsibilities that defendants allegedly owed to Berg.

Defendants also move the court to preclude any testimony Drs. Karnes and Lenorovitz may offer that is outside their expertise, such as the medical risks of ovarian cancer, whether talc is hazardous, and whether there is a feasible alternative product. "An expert may base an opinion on facts or data in the case that the expert has been made aware of or personally observed." Fed. R. Evid. 702. Thus, Drs. Karnes and Lenorovitz can form their opinions based on the testimony of other experts in this case. But Drs. Karnes and Lenorovitz cannot make unsupported statements that are outside of their field of expertise. *See Anderson v. Raymond Corp.*, 340 F.3d 520, 523 (8th Cir. 2003) (noting that

the district court did not abuse its discretion in deciding that an expert could not testify about matters outside of his expertise). In addition, the court need not admit cumulative evidence. Fed. R. Evid. 403. Any detailed description of testimony provided by Berg's other experts regarding the medical risks of ovarian cancer, whether talc is hazardous, and whether there is a feasible alternative product would certainly be cumulative because Drs. Karnes and Lenorovitz are not capable of offering their novel opinions in such areas as they are not qualified to do so. Therefore, the testimony of Drs. Karnes and Lenorovitz regarding these areas must be limited. For purposes of their testimony, Drs. Karnes and Lenorovitz may only "assume" that ovarian cancer has medical risks, talc is hazardous, and there is a feasible alternative product. They cannot, however, go into detail on any of these subjects.

More generally, Berg asserts that Drs. Karnes and Lenorovitz were designated (1) to ascertain if talc posed a hazard to the populace; (2) to determine whether the hazard was open and obvious to a reasonable user; (3) to determine if there was a feasible way to place a warning on the talc product; and (4) to determine if there was a financially and technically reasonable alternative to talc. Docket 173 at 2. As discussed above, Drs. Karnes and

<sup>&</sup>lt;sup>25</sup> This assumes that plaintiff will present evidence that there is a feasible alternative product.

Lenorovitz are not qualified to provide an opinion on whether talc is hazardous to the populace or whether there is a financially reasonable alternative to talc.

Moreover, Drs. Karnes and Lenorovitz cannot assist the jury on the issue of whether the alleged hazard was open and obvious to a reasonable user. The basis for Drs. Karnes and Lenorovitz concluding that the alleged hazard was not open and obvious is based solely on the fact that Berg, Dr. Karnes, and Dr. Lenorovitz were not aware of the hazard prior to this litigation. A jury can rely on its own common sense and experiences in forming its conclusion on whether the alleged hazard was open and obvious.

Therefore, the testimony of Drs. Karnes and Lenorovitz will be limited to whether there was a feasible way to place a warning on defendants' products.<sup>26</sup> The court will now turn to defendants' summary judgment motion.

#### SUMMARY JUDGMENT LEGAL STANDARD

Summary judgment is appropriate if the movant "shows that there is no genuine dispute as to any material fact and the movant is entitled to judgment as a matter of law." Fed. R. Civ. P. 56(a). The moving party can meet this burden by presenting evidence that there is no dispute of material fact or that the nonmoving party has not presented evidence to support an element of her

<sup>&</sup>lt;sup>26</sup> After reviewing the remainder of the report in light of the extensive limitations discussed above, the court finds that any additional proposed testimony outside of the issue of placing a warning on the product is not admissible because it is either cumulative or outside the expertise of Drs. Karnes and Lenorovitz.

case on which she bears the ultimate burden of proof. *Celotex Corp. v. Catrett*, 477 U.S. 317, 322-23 (1986). "The nonmoving party may not 'rest on mere allegations or denials, but must demonstrate on the record the existence of specific facts which create a genuine issue for trial.' " *Mosley v. City of Northwoods, Mo.*, 415 F.3d 908, 910 (8th Cir. 2005) (quoting *Krenik v. County of Le Sueur*, 47 F.3d 953, 957 (8th Cir. 1995)).

Summary judgment is precluded if there is a dispute in facts that could affect the outcome of the case. *Anderson v. Liberty Lobby, Inc.*, 477 U.S. 242, 248 (1986). For purposes of a summary judgment motion, the court views the facts and the inferences drawn from such facts "in the light most favorable to the party opposing the motion." *Matsushita Elec. Indus. Co. v. Zenith Radio Corp.*, 475 U.S. 574, 588 (1986).

Because this is a diversity action, the court applies the law of the state in which it sits. *Prudential Ins. Co. of Am. v. Kamrath*, 475 F.3d 920, 924 (8th Cir. 2007). Thus, South Dakota law applies to Berg's claims.<sup>27</sup>

#### **ANALYSIS**

Defendants move for summary judgment on three grounds: (1) Berg's experts do not present admissible evidence of causation and have failed to rule out other potential causes; (2) there is no evidence that would impose upon

 $<sup>^{27}</sup>$  The parties do not dispute that South Dakota law applies.

defendants a duty to warn; and (3) Berg cannot demonstrate that defendants' failure to warn caused her ovarian cancer.

#### I. Evidence of Causation

Defendants argue that Berg has not presented admissible evidence of causation and thus all of her claims must fail. To survive summary judgment, Berg must present evidence beyond unsupported conclusions and speculative statements that defendants' products caused her injuries. *Burley v. Kytec Innovative Sports Equip., Inc.*, 737 N.W.2d 397, 407-10 (S.D. 2007). Expert testimony is ordinarily required to establish causation in a products liability action, particularly in a toxic tort action. *Id.*; *see also Junk v. Terminix Int'l Co.*, 628 F.3d 439, 450 (8th Cir. 2010) ("To succeed in her claims, [plaintiff] needed to present expert testimony showing that the [substance] could have caused [the] injuries and that it did in fact cause those injuries.").

The majority of defendants' arguments rely on the assumption that the court would grant their motions to exclude expert testimony analyzed above. But because the court found that the majority of the expert testimony offered by Berg is admissible, most of defendants' arguments are moot. The court will nonetheless evaluate the admissible evidence that Berg has put forth to ensure that she has met her burden of creating a genuine issue of fact on the causation element.

As a preliminary matter, Berg asserts, and defendants do not dispute, that she began using talc in her genital area in 1975. She claims that the talc came from defendants' products—"Johnson's Baby Powder" and "Shower to Shower"—and that her use continued until 2007. It is undisputed that Berg was diagnosed with ovarian cancer in December of 2006.

Berg has put forth admissible expert testimony to support her claim that defendants' products caused her ovarian cancer. First, Dr. Cramer, an epidemiologist, opines generally that talc use in the genital area has a strong causal association with ovarian cancer. *See Glastetter*, 252 F.3d at 992 (noting that epidemiological evidence can assist in establishing causation). He goes further to opine that Berg's frequent application of talc to her genital area was "the major cause of her invasive serous ovarian cancer[.]" Docket 148-1 at 18. In forming his opinions, Dr. Cramer relied on various facts: Berg was premenopausal when she was diagnosed; she has no personal or family history of breast or ovarian cancer; she is not Jewish; she tested negative for the full panel of BRCA1 and BRCA2 mutations; and the odds ratio for someone with similar characteristics is 3.53.

Second, Dr. Rosenthal, a toxicologist, provides biologic plausibility to Dr. Cramer's opinions. *See Marmo*, 457 F.3d at 758 ("[A] toxicologist may testify that exposure to a chemical caused a person's symptoms and injuries."). He asserts that talc has immunotoxic potential and can evoke neoplastic events,

which may lead to ovarian cancer. Further, he claims that it is biologically plausible that Berg's frequent application of talc led to chronic inflammation and/or immune modulation of tissues and cells in her ovaries. Thus, he concludes that Berg's frequent genital application of talc "played a role in disease processes leading to her ovarian cancer." Docket 144-1 at 11.

Third, Dr. Godleski, an expert in microscopy, provides evidence that talc was actually present in the tissues that were removed from Berg's ovaries and fallopian tubes following her diagnosis. Lastly, Berg claims that had she known of any dangers involved in applying talc to her genital area, she would not have done so.

Defendants urge the court to grant summary judgment because Berg has not ruled out other potential causes of her ovarian cancer. But Berg is not required to "eliminate all other possible explanations of causation[.]" *Burley*, 737 N.W.2d at 407. She needs only to "set forth sufficient evidence establishing a causal connection between the [defendants' product] and the resulting injury." *Id.* The court finds that she has done so here. Determining the weight of the evidence Berg has put forth is an issue for the jury.

#### II. Duty to Warn

Defendants argue that Berg cannot move forward with her failure to warn claims because she has not established the existence of a duty to warn. The

court must separate Berg's failure to warn claims to address defendants' argument.

#### A. Strict Liability Failure to Warn

Defendants argue that they did not owe Berg a duty to warn because their product is not dangerous. "The issue under strict liability is whether the manufacturer's failure to adequately warn rendered the product unreasonably dangerous without regard to the reasonableness of the failure to warn judged by negligence standards." *Peterson v. Safway Steel Scaffolds Co.*, 400 N.W.2d 909, 912 (S.D. 1987). "[K]nowledge of the potential risk is imputed to the manufacturer." *Id.* Thus, defendants cannot defend "on grounds that, at the time of production, [they] neither knew nor could have known of the risk." *Id.* Thus, if Berg can establish at trial that a "danger existed associated with a foreseeable use of [defendants'] product," the duty to warn element is automatically satisfied for purposes of her strict liability failure to warn claim. *Burley*, 737 N.W.2d at 409.

#### B. Negligent Failure to Warn

To establish liability for negligent failure to warn, Berg must show, among other things, that defendants "knew or reasonably should have known that the product was dangerous or was likely to be dangerous when used in a reasonably foreseeable manner." *Id.* at 410. Defendants argue that there was and still is no duty to warn because there lacks any substantial evidence that

their products are dangerous. Additionally, defendants argue that any evidence that Berg puts forth that allegedly shows dangers associated with defendants' products falls short of creating a duty to warn.

Defendants' arguments are premature at this time. Defendants are correct in stating that under South Dakota law "the existence of a duty is a question of law to be determined by the court." Janis v. Nash Finch Co., 780 N.W.2d 497, 500 (S.D. 2010). But in a negligent failure to warn case, whether defendants owed Berg a duty to warn depends, first, on whether defendants' products are unreasonably dangerous. See Burley, 737 N.W.2d at 410 (requiring plaintiff to show that the "manufacturer knew or reasonably should have known that the product was dangerous"). Indeed, if defendants' products are not dangerous, no warning would be necessary. Whether defendants' products are unreasonably dangerous is a factual determination for the jury. See Peterson, 400 N.W.2d at 914 ("[I]ssues of reasonableness and foreseeability . . . are usually jury issues."). Thus, the court cannot make its legal determination of whether a duty existed until the jury has the opportunity to determine if the products are dangerous. See Reiss v. Komatsu America Corp., 735 F. Supp. 2d 1125, 1146 (D.N.D. 2010) ("The existence of a duty to warn is generally a preliminary question of law for the court, but if the existence of a duty depends

upon factual determinations, their resolution must be resolved by the trier of fact.").<sup>28</sup>

#### III. Proximate Cause

Defendants also argue that Berg has failed to put forth sufficient facts to show that defendants' failure to warn was the legal cause of her ovarian cancer. Defendants' argument raises the issue of when the duty to warn arose. They claim that even if a duty to warn exists, such duty arose much later than 1975—the year Berg began dusting her perineum with talc. Thus, defendants argue, Berg cannot prove that defendants' failure to warn was the legal cause of her cancer because the duty did not arise in time to prevent her cancer.

As discussed above, Berg's strict liability claim does not necessitate the finding that a duty existed. Moreover, the issue of *whether* a duty ever existed must first be determined in order to ascertain *when* such a duty arose. Even so, Berg has put forth evidence that defendants were aware of the alleged dangers of talc as early as 1971. Thus, there is a material issue of fact as to whether defendants "knew or reasonably should have known that the product was dangerous" as far back as 1971. *See Burley*, 737 N.W.2d at 410.

<sup>&</sup>lt;sup>28</sup> Defendants' reliance on *Brech v. J.C. Penney Co.*, 698 F.2d 332, 334 (8th Cir. 1983), in support of their assertion that federal standards are relevant in determining if a duty to warn existed is misplaced. In review of District Court Judge Nichol's factual findings from a bench trial, the Eighth Circuit stated that "[a]lthough evidence that the gown surpassed federal standards is not necessarily conclusive proof that the garment was not *unreasonably dangerous*, it is nevertheless evidence which the court can consider on the issue." *Id.* (emphasis added).

In summary, Berg has put forth sufficient, admissible evidence to show that there exists genuine issues of material fact. Also, the court is unable to determine whether defendants owed Berg a duty to warn at this time. Thus, defendants' motion for summary judgment is denied.

#### CONCLUSION

Dr. Cramer's expert opinion is admissible because it was the product of reliable methodologies, and he was not required, as an epidemiologist, to rule out all alternative causes of Berg's ovarian cancer. The majority of Dr. Rosenthal's opinions are admissible because he is qualified to render such opinions, and he used reliable methodologies in forming his opinions.

Dr. Godleski's opinion is admissible because he is qualified, and the opinion is relevant and stems from reliable methodologies. Lastly, Dr. Lenorovitz and Dr. Karnes, as human factors experts, can only testify on the limited issue of whether there was a feasible way to place a warning on defendants' products.

Moreover, Berg has put forth sufficient evidence to show that there exists genuine issues of material fact that preclude summary judgment. Furthermore, the court is unable to determine whether defendants owed Berg a duty to warn at this time. Accordingly, it is

ORDERED that defendants' motion to exclude the testimony of Dr. Godleski (Dockets 140 & 153) is denied.

## ORDER ON JOHNSON DEFENDANTS' MOTIONS TO EXCLUDE THE TESTIMONY OF DR. JAMES BARTER, DR. LAURA PLUNKETT, AND DR. JOHN GODLESKI

The matter is before the Court on Defendant Johnson & Johnson, Inc., and Johnson & Johnson Consumer Companies, Inc.'s ("Johnson Defendants") motions to exclude the expert testimony of various witnesses, filed on October 30, 2019.<sup>1</sup> Plaintiff filed responses in opposition to the motions to exclude on November 29, 2018.

#### The *Daubert* Standard

Trial courts act as gatekeepers in assessing an expert witness' qualifications to testify and the relevancy and reliability of that expert's testimony. Kumho Tire Co. v. Carmicheal, 526 U.S. 137, 141 (1999). Motions to exclude testimony of an expert witness are properly granted "where there is no circumstance under which the evidence under scrutiny is likely to be admissible at trial." Shiver v. Ga. & Fla. Railnet, Inc., 287 Ga. App. 828, 829 (2007) (quoting Gwinnett Co. v. Howington, 280 Ga. App. 347 (2006)). Expert scientific or technical testimony is admissible only if it is both relevant and reliable. Kumho Tire Co., at 137. The test for determining the reliability of expert testimony is flexible and the *Daubert* factors, such as testing, peer review, error rates, and

<sup>&</sup>lt;sup>1</sup> While the motion was filed by the Defendants, Defendant Imerys Talc America, Inc., filed a notice of bankruptcy on February 13, 2019 and this Court entered an order reserving rulings on all pending motions filed by Defendant Imerys Talc America, Inc.

acceptability within relevant scientific or technical communities, "neither necessarily nor exclusively appl[y] to all experts or in every case." <u>Id.</u>, at 142.

The determination of whether a witness is qualified to render an opinion as an expert is a legal determination for the trial court and is not disturbed by reviewing courts absent an abuse of discretion. HNTB Ga., Inc., v. Hamilton-King, 287 Ga. 641, 642 (2010); Yount v. State, 249 Ga. App. 563, 565 (2001). In considering the admissibility of expert testimony, a trial court should first consider whether the factors are reasonable measures of reliability in a given case before evaluating proffered expert testimony. Kumho Tire Co., at 152. The Georgia Court of Appeals has identified the "two methods by which [a] plaintiff in a chemical exposure case may show specific causation in a manner that satisfies the *Daubert* standard: (1) 'dose/response relationship' or 'threshold phenomenon; and (2) 'differential diagnosis.'" Shiver v. Ga. & Fla. Railnet, Inc., 287 Ga. App. 828 (2007)(quoting Hardyman v. Norfolk & Western R. Co., 243 F3d 225, 263 (2001)). In Hardyman, the Sixth Circuit Court of Appeals noted that Plaintiff's expert testified that "one simply could not quantify the level or dose of risk factors causative of [carpal tunnel syndrome] in a manner consistent with a dose/response relationship or threshold level." Hardyman, at 262. The Hardyman Court likened carpal tunnel syndrome and its unknown dose/response relationship with exposure to toxic substances:

while precise information concerning the exposure necessary to cause specific harm to humans and exact details pertaining to the plaintiff's exposure are beneficial, such evidence is not always available, or necessary, to demonstrate that a substance is toxic to humans given substantial exposure and need not invariably provide the basis for an expert's opinion on causation.

<u>Hardyman</u>, at 265-66(quoting <u>Westberry v. Gislaved Bummi AB</u>, 178 F.3d 257, 264 (4<sup>th</sup> Cir. 1999).

Finally, a critical distinction exists between the admissibility of expert testimony and its credibility as determined by the trier of fact: "[v]igorous cross-examination, presentation of contrary evidence, and careful instruction on the burden of proof are the traditional and appropriate means of attacking shaky but admissible evidence." <u>Daubert v. Merrell Dow Pharmaceuticals, Inc.</u>, 509 U.S. 579, 596 (1993).

#### Dr. James Barter

Defendant moves the Court to limit the expert testimony of Dr. James Barter on the grounds that he failed to rule in Ms. Brower's use of Johnson & Johnson as a possible cause of her ovarian cancer and his failure to rule out other risk factors associated with cancer. Defendant's contentions go to the credibility of his testimony, not its admissibility. <u>Daubert</u>, *supra*. Accordingly, based upon review of the record and applicable law cited above, Defendants' motion to exclude the testimony of Dr. James Barter is DENIED.

#### Dr. Laura Plunkett

Defendant moves the Court to limit the expert testimony of Dr. Laura Plunkett on the basis that she does not have the requisite experience to testify about the causes of ovarian cancer, has never been a business executive or manager of product safety for a cosmetics company, and does not have legal training. A review of the record indicates that Dr. Plunkett has significant experience as a board certified pharmacologist and toxicologist. Accordingly, based upon the record as a whole and applicable law cited above, Defendants' motion to exclude the testimony of Dr. Laura Plunkett is DENIED.

#### Dr. John Godleski

Defendant moves the Court to exclude the expert testimony of Dr. John Godleski on the basis that his report fails to identify the methodology relied on in his conclusion. A review of the record indicates that Dr. Godleski's report details his methodology sufficiently in his report. Accordingly, based upon the record as a whole and applicable law cited above, Defendants' motion to exclude the testimony of Dr. John Godleski is DENIED.

SO ORDERED this 26th day of March, 2019.

4 (Pages 388 to 391)

Linda Loretz, Ph.D.

	Page 392		Page 394
1	PROCEEDINGS	1	A Yes.
2		2	Q Okay. And a 30(b)(6) deposition, just
3	THE VIDEOGRAPHER: The time is 9:09 a.m.	3	to get rid of all the legalese there, is a
4	on October 1st, 2018. This is video 1, Volume II,	4	deposition where the company puts forward a
5	in the continued deposition of Dr. Linda Loretz.	5	witness to testify on behalf of the company.
6	A reminder to the witness, she is still	6	You understand that?
7	under oath.	7	A Yes.
8	CROSS-EXAMINATION	8	Q And you understand that your testimony
9	BY MR. TISI:	9	is binding on the company?
10	Q Good morning, Dr. Loretz.	10	A Yes.
11	A Good morning.	11	Q Okay. And you're speaking not only as
12	Q Just to remind the jury, what is	12	Dr. Loretz, but you're speaking on behalf of the
13	please state your name, please.	13	Personal Care Products Council?
14	A Linda Loretz.	14	A Yes.
15	Q Okay. And you are a toxicologist?	15	Q And by the Personal Care Products
16	A Yes.	16	Council, you understand that we also mean an
17	Q Okay. And you're here represented by	17	organization called CTFA?
18	counsel?	18	A Correct.
19	A Yes.	19	
20	Q My name is Chris Tisi. I represent	20	Q Okay. And that's the predecessor name for the Personal Care Products Council, and I
21	women with ovarian cancer who claim that talcum	21	•
22	powder products like Johnson & Johnson baby powder	22	guess it was the Cosmetic Toiletry and Fragrance
23	and Shower to Shower powder caused or contributed	23	A Association.
24	to their ovarian cancer.	24	
25	Do you understand that?	25	Q Association, correct? A Correct.
	<u>`</u>	23	
1	Page 393		Page 395
1 2	A Yes.	1	Q Yeah. And you understand your testimony
		ا م	
	Q Okay. And by the terms "talcum powder	2	is also binding on them as well?
3	products," you understand that I mean cosmetic	3	is also binding on them as well?  A Yes.

And if I had a bottle of either Shower to Shower here or Johnson's Baby Powder, what I'm referring to is everything that's in the bottle.  Do you understand that? A Okay, yes. Q That includes fragrance, it includes whatever is mined from the from the mine, whatever is in that bottle.  Do you understand? A Okay. Q I'm not talking about pure crystalline talc. A Okay. Q Okay? Unless I say otherwise. Have we ever met before? A I don't believe so.	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	is also binding on them as well?  A Yes.  Q Okay. You also understand that you are under oath, and your testimony testimony may be played for the court or jury to consider amongst all the other evidence in the case?  A I do.  Q Okay. I'm going to hand you what I would like to have marked as well, that has been marked as Exhibit 1 to your prior deposition. We don't have those exhibits here, but I do have a copy of it. I don't have a copy for all counsel.  You are here pursuant to that Second Amended Notice of Deposition?  A Okay, yes.  Q Okay. All right.  I'd like to talk to you a bit about what was done to prepare for this portion of your deposition. Your deposition this is a continuation of a deposition that happened I believe in July.

5 (Pages 392 to 395)

Linda Loretz, Ph.D.

Page 396 Page 398 1 put your counsel aside for a moment -- any other 1 not prepared to testify to today as -- fully? 2 either employees, current or former employees, of 2 A Categories, I would say no. 3 3 Personal Care Products Council? Q Okay. Now, I'm going to ask you some 4 A No, just counsel. Just my counsel 4 questions today relating to specific categories, 5 5 and -and I'll list them. 6 6 Q Have you spoken to any third-party 1(e), which is dissemination of medical 7 witnesses in this case, people -- for example, 7 and scientific information on talcum powder and 8 employees of Johnson & Johnson, employees of -- of 8 ovarian cancer, 1(f), 1(g), 4(a), 4(c), and 9 Imerys, outside researchers? 9 categories 8 through 22. 10 10 A Not about this case, no. I'm just doing that for the record, but 11 Q Okay. What additional work have you 11 broadly they fall into two broad categories, and I'm going to separate my questions to you into two 12 done to prepare yourself or further prepare 12 13 yourself to testify to the topics contained in 13 broad categories. Okay? 14 that notice of deposition? 14 A Okay. 15 A I met with my attorney for several days 15 Q And the broad categories are this: 16 reviewing records, minutes, e-mails, documents 16 Communications with the Food and Drug 17 related. 17 Administration about talcum power products and 18 Q Have you spoken to John Bailey at all? 18 ovarian cancer, including, for example, the 19 19 Citizen's Petition issue. A No. 20 Q Have you spoken to John Bailey at all 20 A Okay. 21 since -- you know who John Bailey is? 21 Q Okay? 22 A Yes. 22 A Yes. 23 Q Have you spoken to John Bailey at all 23 Q The one area that I will not cover that 24 since -- at any time in this process, including 24 will be covered by one of my colleagues is the CIR 25 before your first deposition? 25 report. Page 397 Page 399 1 1 A Okav. A No. 2 Have you spoken to any lawyers not your 2 So you won't hear CIR from me. 3 3 But other than that, the communications own? 4 A The PCPC lawyers, Tom Myers and Emily 4 with the FDA will be issues I'll be asking you 5 Manoso, but beyond that, no. 5 about. 6 Q Okay. Have you reviewed the notice of 6 A Okay. 7 deposition that I placed before you, Exhibit 7 Q The second part of it is -- will be 8 No. 1, to refamiliarize yourself with the topics 8 about consultants and studies, people with whom 9 we're here to discuss today? 9 you consulted and studies that were performed or 10 A I've reviewed it before. I haven't 10 not performed at the direction of or with the 11 reviewed it very, very recently, but --11 cooperation with PCPC. 12 Q Okay. Is there any topic or topics in 12 A Okay. 13 that notice for which you have been designated 13 Q Okay. So just broadly speaking, the two 14 that you do not feel comfortable testifying to 14 categories are communications with FDA except for 15 today? In other words, that you are not -- your 15 CIR, and consultants and -- and studies. 16 investigation is not complete and you don't have 16 A Okay. Q Okay? 17 information about the topics. 17 18 A I mean, I guess I would just note that 18 A Yes. 19 obviously I wasn't here in the '80s, so I can only 19 Q All right. So let's get started. 20 go by the records that I have seen. But beyond 20 I want to talk about first 21 21 that, no. communications with the FDA, and I'd like to use 22 Q I guess what I'm asking you, and this is 22 as kind of a fulcrum of our discussions the 23 a process that is a little bit of a give and take 23 Citizen's Petition, and you know what I mean by 24 between you and me, and I -- I just want to ask 24 the "Citizen's Petition"? 25 you, are there any categories there that you're A Yes.

6 (Pages 396 to 399)

Linda Loretz, Ph.D.

Page 400 Page 402 Q Okay. To help us really understand 1 1 A 2006, no? 2 this, I prepared a timeline --2 O 2006. Excuse me. 3 MR. LOCKE: Counsel, can I just ask, I 3 Yes. A 4 mean there were a number of Citizen's Petitions. 4 O Yeah. And the Cancer Coalition 5 Can you --5 Prevention citizens filed with the FDA, and that's 6 6 in 2008. MR. TISI: I'm going to be clear. 7 MR. LOCKE: Okay. 7 A Yes. 8 MR. TISI: I'm giving a timeline here, 8 Q Okay. And there were other things. Those are already on the chart. You agree with 9 and we'll --9 10 10 MR. LOCKE: Okay. those? 11 MR. TISI: -- we'll do that. 11 A Yes. Q Okay. Let's talk for a moment what your 12 BY MR. TISI: 12 13 Q So to begin, I'm going to start with the 13 understanding -- first of all, in the course of most recent Citizen's Petition, the one that was your work with the PCPC, have you had occasions to 14 14 15 15 deal with Citizen's Petitions before, or is this filed in 2008. 16 16 the only time that this happened? A Yes, mm-hmm. 17 17 Q And you're familiar with that, correct? A Before this, this was probably the first 18 18 one. I mean we -- we filed a Citizen's Petitions A Yes. 19 19 O And to help us understand the context in ourselves that came after this. Nothing to do 20 which that Citizen's Petition was filed and what 20 with talc. 21 it is, and we haven't explained it to the jury yet 21 Q Right. And so you're familiar with the 22 and we will, I've prepared a little bit of a 22 process? timeline here. And we're going to kind of mark 23 2.3 A Yes. 24 some things so that everybody understands the 24 Q Okay. So would you tell the members of 25 historical context in which that petition was 25 the jury a little bit about what a Citizen's Page 401 Page 403 1 actually filed. 1 Petition is to the best of your understanding. 2 And I'm going to give a copy to counsel, 2 A It's -- it's --3 and we're going to hopefully fill this out 3 MR. LOCKE: Objection. 4 THE WITNESS: It's going to be a very together, and you correct me if I'm wrong on 4 5 any -- on anything I write on here. 5 simple thing, because I -- I --6 And we're going to mark this as Exhibit 6 BY MR. TISI: 7 7 Q Simple is -- simple is always better. No. 41. 8 8 A -- I have a lot of details. I mean (Exhibit No. 41 was marked for 9 identification.) 9 it's -- it's -- someone can petition FDA to 10 10 request something through a process. I believe BY MR. TISI: 11 Q And we may come back to this during the 11 the process is probably spelled out in the Code of 12 course -- back and forth to this during the 12 Federal Regulations. They can request something 13 to FDA, and then FDA has, I believe, an obligation deposition, so I'm going to ask you to kind of --13 14 we'll kind of put it aside and bring it back and 14 to respond within a certain amount of time, 15 all that. 15 although they can -- they can respond by saying 16 And just for the members of the jury, 16 we've gotten it and we're reviewing it, and then we've marked on here, we started with 1994, and they need to eventually respond to it. 17 17 18 there's a reason why I've done that, which will 18 Q And are there opportunities for other 19 become apparent, and then there's the National interested parties to file comments to that 19 petition? 20 Toxicology Program 10th Report on Carcinogens 20 21 21 that's in the year 2000. A Yes. 22 You know what I'm talking about? 22 Q Okay. And PCPC has on occasion actually 23 23 filed Citizen's Petitions themselves. 24 24 A Yes. Q Okay. The IARC review which was 2005. 25 Correct? 25 Q And we're aware that the -- a Citizen's

7 (Pages 400 to 403)

Petition was filed by a group called the Cancer Prevention Coalition seeking a cancer warning on cosmetic tale products in 2008. Correct?  4 A Yes. 5 Q Okay. And that was actually filed 6 that was actually filed in May of 2008? 7 A I don't remember. 8 Q Okay. Let's see if I can help you here. 9 (Exhibit No. 42 was marked for identification). 11 BY MR. 8 (Pages 404 to 407)

Page 408 Page 410 1 was an issue that was one that wasn't just one 1 Q Okay. So taking off your hat of 2 that was raised and forgotten, it was an issue 2 Dr. Loretz and putting on your hat as Personal 3 3 Care Products Council, can you tell us when the that was persistently discussed in the medical and scientific literature from that point forward. 4 4 Personal Care Products Council first became aware 5 5 Fair? of this petition? 6 6 A I'm sure it was soon after it was filed. A Yes. 7 Q Okay. So it was discussed in the '80s, 7 Q So it was filed in May of 2008. It 8 8 '90s, 2000s, and in fact, it's still being would have been approximately May of 2008. 9 discussed today. 9 A Yes. I believe so. 10 10 A Yes. Q All right. Let's put that aside for a 11 Q And by 2008, which would have been about 11 moment. We'll come back to that. 12 20 -- two decades plus since those initial 12 Now, in July of 2009, did the Personal 13 reports, the Cancer Prevention Coalition filed a 13 Care Products Council file a white paper with the 14 14 petition to the FDA that asked the FDA to mandate, FDA or comments with the FDA opposing the Cancer require, that all talcum powder products have some profession -- Prevention Coalition petition? 15 15 16 kind of warning for ovarian cancer. True? 16 A Yes. 17 A That's what the petition says, yes. 17 Q And that was filed on July 21st, 2009. 18 Q Okay. And so if you go to page 2 of the 18 Correct? 19 19 A I don't recall. letter. 20 MR. TISI: Can you please go back? 20 Q Let me see if I can provide you with 21 BY MR. TISI: 21 what I have marked as Exhibit No. 43. 22 22 (Exhibit No. 43 was marked for Q Section A, it says: "Agency action 23 requested," and point number 1, it says: 23 identification.) 24 "Immediately require cosmetic talcum powder 2.4 BY MR. TISI: 25 products to bear labels with a prominent warning 25 Q Is that the PCPC -- I'm sorry. Page 409 Page 411 1 1 Is this the response of the Personal such as 'Frequent talc application in the female 2 genital area is responsible for major risks of 2 Care Products Council to the Epstein petition to 3 ovarian cancer." 3 add a warning? 4 4 Do you see that? A Yes. 5 5 Q Okay. Now, is it fair to say, and if A Yes. 6 Q Did I read that correctly? 6 you go to the -- the position of the Personal Care 7 7 A That's what it says. Products Council is the addition of a warning 8 8 Q Okay. And Dr. Epstein also asked to be label on products such as Johnson & Johnson's baby 9 heard by the FDA on this petition, correct? 9 powder and Shower to Shower would be inappropriate 10 10 and unnecessary? A That's what it says, yes. 11 11 Q Okay. So not only did he file a letter A You're reading that somewhere? 12 requesting that the -- a warning be added to 12 Q It's the very last -- second to last 13 13 talcum powder products, but he also wanted to meet paragraph at the end. 14 with them, correct? 14 A Yes. 15 A That's what it says, yes. 15 Q And so just to make sure that we're kind 16 Q All right. You became -- the Personal 16 of 2000 -- at 30,000 feet, the petition was filed 17 17 Care Products Council became aware of this asking for a warning. The petition of the Personal Care Products Council was no warning was 18 petition -- do you remember when it became aware 18 19 19 of this petition? necessary. 20 20 A I really don't. A That's correct. 21 Q Okay. Do you remember the circumstances 21 Q In this petition did the Personal Care 22 22 under which it became aware of this petition? Products Council lay out the standard for when a 23 A I don't remember the details, no. I'm 23 warning is appropriate, if you know? 24 24 A I believe our response to the petition sure it was -- I'm sure it was soon after it was 25 filed, but I don't remember the details. 25 was to look at the science on talcum powder and

Page 412 Page 414 1 ovarian cancer. 1 Loretz. You're speaking here as a -- as the 2 Q Okay. But the question that I asked is 2 organization. 3 3 a different one. A Okay. 4 The standard of when a warning is 4 Q And the organization is responding to a 5 required is a standard that you're familiar with? 5 request to add a warning. Right? 6 A That sounds more like a legal concept, 6 A Yes. 7 so I'm not sure that I am. 7 Q And the -- presumably -- I mean, maybe I 8 8 Q Well, does the Personal Care Products should ask you the question: Did PCPC consult 9 with the requirements for adding a warning before 9 Council provide a labeling manual for its members? 10 10 A We do, but it's -- it's -- yes, it's a responding to this petition? 11 summary of existing labeling requirements, 11 MR. LOCKE: Objection. regulatory requirements. 12 THE WITNESS: I -- I mean, we don't 12 13 Q Right. Does this petition --13 agree with the petitioner's rationale for adding a 14 Dr. Epstein asked for a label to be added, 14 warning. 15 15 BY MR. TISI: correct? 16 16 MR. LOCKE: Objection. Q I understand you -- you have a difference in the weight of the evidence that 17 THE WITNESS: Yes. 17 18 18 would support or not support a warning. BY MR. TISI: My question is, did you understand at 19 Q And this opposes the addition of a 19 the time the standard for what -- what would 20 label, correct? 20 21 MR. LOCKE: Objection. 21 require a warning or not? 22 THE WITNESS: Yes. 22 MR. LOCKE: Objection. 23 THE WITNESS: I think it was our 23 BY MR. TISI: 24 O Did the Personal Care Products Council 24 understanding this would not require a warning. 25 in any way analyze or -- or discuss the standard 25 BY MR. TISI: Page 413 Page 415 1 for providing when a label -- to add a warning on 1 Q Well, what was the standard? 2 a cosmetic product is required? 2 MR. LOCKE: Objection. 3 MR. LOCKE: Objection. 3 THE WITNESS: I'm not sure I understand THE WITNESS: We -- as I say, what we 4 4 that question. 5 did was we reviewed the science on ovarian cancer, 5 BY MR. TISI: 6 talcum powder, and our position is that there is 6 Q Okay. Did the standard require that --7 and if you don't know the answer, you don't know not evidence of a causative role, and therefore we 7 8 8 did not believe a -- a label is necessary. the answer, okay? 9 MR. TISI: Okay. Move to strike. 9 But does the standard for providing a 10 BY MR. TISI: 10 warning require that causation be proven, be unequivocal? 11 11 Q My question was a different one. 12 Does this opposition that was filed in 12 MR. LOCKE: Objection. That's beyond July of 2009 contain any discussion of what the 13 13 the scope. 14 standard is? 14 You can answer in your personal 15 MR. LOCKE: Objection. 15 THE WITNESS: No, it addresses the 16 16 THE WITNESS: I'm not sure what you mean by the standard for requiring a warning. 17 science. 17 BY MR. TISI: 18 BY MR. TISI: 18 Q Okay. Do you know whether or not the 19 Q Well, this is -- this is a response to a 19 20 standard requires that causation be proven before 20 request that a warning be added. 21 21 A Correct. Which FDA later said it a warning be added? 22 A I -- I think that sounds like a legal 22 doesn't require a warning. 23 question. I -- I --23 O That's not --24 Q I'm asking you since this was filed 24 MR. TISI: Move to strike. 25 on -- you're -- you're speaking here not as Linda 25 BY MR. TISI:

Page 416 Page 418 Q Okay. My -- my -- my question is, did 1 1 level of evidence that's required before a label 2 the PCPC consult what the legal -- what the legal 2 3 standard was for when a warning is required? 3 MR. LOCKE: Objection. Beyond the 4 MR. LOCKE: Objection. 4 scope. 5 5 THE WITNESS: I mean, I -- I -- I think BY MR. TISI: 6 it's fair to say we have a lot of lawyers at PCPC, 6 Q If you don't know, you don't know. 7 and if they felt this were inappropriate from a 7 A Yeah, I -- I guess I would say I don't 8 legal standpoint to have this position, we would 8 know, but I --9 not have that position. 9 Q That's fine. But you wrote this letter 10 10 anyway, you or Dr. Bailey wrote this letter to the BY MR. TISI: 11 Q Did they set out what the standard is in 11 FDA responding to requests for requiring a label. the letter? Is there anything in this letter --A Again, I would say certainly there was 12 12 13 first of all, who drafted this cover letter? 13 awareness within PCPC, and it was felt that this 14 14 A It was either myself or John Bailey. was appropriate as a response. Q Okay. Did you consult with -- either 15 Q Right. And there was -- but there was 15 16 one of you consult with what the standard is for 16 no discussion about what the standard is under the 17 when a warning is required before writing this 17 Code of Federal Regulations in this -- in this 18 letter? 18 letter, correct? 19 19 MR. LOCKE: Objection. MR. LOCKE: Objection. 20 THE WITNESS: I'm -- again, I'm not 20 THE WITNESS: And again, I would just 21 quite sure when what you mean "when a warning was 21 say our -- our view was that -- that there was not required." By whom? 22 22 a need for warning because of the lack of 23 BY MR. TISI: 23 evidence. 24 Q Well, you -- you know -- do you know 24 BY MR. TISI: 25 that warnings are added when a cosmetic product 25 Q Okay. Well, as -- as we discussed Page 419 Page 417 1 may cause -- there's evidence that they may cause 1 before, this issue was one that was debated in the 2 a potential harm? 2 medical and scientific community for almost 25 3 MR. LOCKE: Objection. Beyond the 3 years before this petition was filed, correct? 4 4 A It was a topic, yes. scope. 5 5 Q All right. And some epidemiologists You can answer in your personal 6 6 looking at the evidence felt that there -- there capacity. 7 THE WITNESS: I'm sorry. What's the 7 was sufficient evidence to raise a causal 8 8 question? inference, correct? 9 9 BY MR. TISI: MR. LOCKE: Objection. 10 Q Do you know that warnings can be added 10 BY MR. TISI: 11 voluntarily when there's evidence that the product 11 Q Including Dr. Epstein. 12 may cause a potential harm? 12 MR. LOCKE: Objection. MR. LOCKE: Same objection, and to form. THE WITNESS: Dr. Epstein did, but I 13 13 14 THE WITNESS: And as our position being 14 think the literature, as we point out and as we 15 that there was not support for that harm, we would 15 had our epidemiologists point out, that there is a 16 not have supported adding a voluntary label. 16 lot of inconsistency. 17 BY MR. TISI: 17 BY MR. TISI: Q I -- I understand. 18 Q Understood. My -- I understand that's 18 A We would not have said, yes, this should 19 19 your position. 20 20 My question, though, is a different one, be labeled. 21 21 Q But should -- do you not understand what Dr. Loretz. There were epidemiologists and -- and 22 22 scientists in the medical and scientific the standard is for a label? 23 MR. LOCKE: Objection. 23 communication who disagreed with the PCPC's view 24 24 of the sufficiency of the evidence. This was an BY MR. TISI: 25 Q What is -- what is the -- what is the 25 active debate, correct?

11 (Pages 416 to 419)

Page 422 Page 420 1 MR. LOCKE: Objection. 1 Citizen's Petition," and that would be July 2009. 2 THE WITNESS: That's probably fair to 2 Okav? 3 say, and certainly Dr. Epstein disagreed. 3 A Yes. 4 BY MR. TISI: 4 MR. LOCKE: I'm just going to object. I 5 5 mean it says "Comments" on it. It doesn't say O Right. And there were others. I mean 6 Dr. Cramer, another -- another doctor who you are 6 "opposition to," but --7 familiar with, wrote and published -- and 7 BY MR. TISI: 8 published in the literature several -- several of 8 Q But I think -- I think the testimony was 9 the studies. You know that he felt and published 9 this was in opposition to adding a warning, 10 that there was an inference of causation, true? 10 correct? 11 MR. LOCKE: Objection. 11 A Yes. We did not think a warning was THE WITNESS: I believe that would be 12 12 necessary. 13 true, and then the -- there were epidemiologists 13 Q Okay. So let's put that aside for a 14 who did not agree with that. 14 moment. 15 BY MR. TISI: 15 Oh, I'm sorry, before -- before we leave 16 Q Fine. Okay. And that kind of 16 this document, if you go to page 4 of 39 of this 17 illustrates a point that I think is important to 17 document, you attach a report. A Yes. 18 18 make here. 19 19 Looking at the evidence that -- some of Q PCPC attaches a report. And this is a report by a group called the Meta-Analysis 20 which was summarized in this letter, reasonable --20 21 scientists looking at the evidence could reach 21 Research Group. Correct? 22 different conclusions looking at that evidence, 22 A Yes. 23 and in fact, did reach different conclusions, Q Okay. And that's a group that you're 2.3 24 correct? 24 familiar with? 25 25 A Yes. MR. LOCKE: Objection. Page 421 Page 423 1 1 Q Okay. And it was prepared by a THE WITNESS: Yeah, there were different Dr. Michael Huncharek? 2 opinions. 2 3 BY MR. TISI: 3 A Yes. 4 4 Q Okay. And there were different opinions Q And a Dr. Joshua Muscat? 5 5 A Correct. based upon the evidence, correct? 6 A I don't want to go to what the -- what 6 Q And they both identify themselves as 7 the thoughts were, but I mean, there's a body of 7 being with the Meta-Analysis Research Group. 8 scientific literature, yes. 8 A As well as other affiliations, but yes. 9 Q Right. And that's not unusual. You've 9 Q All right. And we'll get into this in a 10 been in this business for -- for a while. 10 minute, but this report was initially written for 11 Scientists and doctors look at -- look at the 11 Johnson & Johnson, correct? 12 evidence, and some -- they can often disagree 12 A Yes. 13 about evidence, correct? 13 Q And it was then -- in fact, earlier 14 A That's true. 14 versions of this have "Prepared for Johnson & 15 Q All right. All right. So let's put 15 Johnson." This version that was submitted to the this opposition to the Citizen's Petition on our 16 16 FDA says "Prepared for the Personal Care Products Council." Correct? 17 timeline here, and this was --17 18 18 A That could be, yes. MR. TISI: Maybe we can switch back to 19 Q Okay. And it was actually prepared for this. 19 20 20 Johnson & Johnson, but --THE VIDEOGRAPHER: It is. It's in 21 21 A Originally. process. 22 MR. TISI: If I can see if I can write 22 Q Originally. It was not prepared for or initiated by the Personal Care Products Council, 23 23 it. 24 24 BY MR. TISI: correct? 25 Q This would be "PCPC opposition to 25 A We took it over, though, yes.

13 (Pages 424 to 427)

Page 428 Page 430 1 being copied was related to the IARC review. 1 what Dr. Huncharek did. 2 Q Okay. And you also understand -- we'll 2 Q Okay. Do you know whether or not they 3 3 were an organization that was a contract research talk about this in a moment -- they let you know 4 that there were publications that were being 4 organization? For example, do you know whether or 5 5 planned by Huncharek and Muscat, true? not they were litigation consultants? Do you know 6 MR. LOCKE: Objection. 6 whether or not they were -- you know, what they 7 7 THE WITNESS: I'm not sure. I may have were? 8 8 MR. LOCKE: Objection. known. THE WITNESS: I mean I think we were 9 BY MR. TISI: 9 10 10 Q Okay. We'll talk about those. We'll familiar with them from doing this. This to me --11 talk about those. 11 so we know they did this kind of meta-analysis, which again was something I know that both 12 But -- but the bigger picture, Doctor, 12 is that Huncharek and Muscat were people who had 13 13 Dr. Huncharek and Dr. Muscat did. So ... 14 MR. TISI: I'm going to -- I'm going to been in communication with the talc industry going 14 15 back to at least 2000 and perhaps before. 15 actually move to strike. 16 MR. LOCKE: Objection. 16 BY MR. TISI: 17 THE WITNESS: Muscat in 2000, I'm 17 Q My question was, do you know -- or did 18 18 you do any due diligence as to what Meta-Analysis certainly aware of that. 19 Research Group was? 19 BY MR. TISI: MR. LOCKE: Objection. 20 Q And you said you had spoken to Huncharek 20 21 21 THE WITNESS: No, because we knew who 22 22 A I spoke to him I believe around the time the authors were. (Exhibit No. 44 was marked for 23 23 of this, I think. I spoke to him once, I know 24 that, and I can't remember exactly when it was. 24 identification.) 25 Q Okay. Now, prior to the talc -- prior 25 BY MR. TISI: Page 429 Page 431 1 to this publication, had you ever heard of the 1 Q Okay. I'm going to show you Exhibit 2 Meta-Analysis Research Group ever? 2 No. 44. 3 MR. LOCKE: When you refer to "this 3 And I'm not concerned with the front 4 publication," you mean Exhibit 43? pages of it. But with an attachment. 4 5 MR. TISI: Correct. 5 Here you go. MR. TISI: I'm sorry? Oh, Tom, I'm 6 BY MR. TISI: б 7 Q Let me -- let me rephrase the question, 7 sorry, here you go. 8 8 MR. LOCKE: Thank you. because -- to be clear. 9 9 MR. TISI: Yep. Prior to these comments that were 10 submitted to the FDA in July of 2009 under the 10 BY MR. TISI: 11 letterhead of Meta-Analysis Research Group, had Q And if you go to the last -- and I'll 11 12 you ever had occasion to come across Meta-Analysis 12 just represent to you, this is a proposal from 13 Research Group before then? 13 Dr. Huncharek to Bob Glenn to do certain papers 14 A I honestly don't know. I believe 14 and research on behalf of Imerys in 2004. 15 Dr. Muscat's affiliation was not that in 2000. 15 But attached to it --16 Q It was American Health Foundation. 16 MR. LOCKE: Let's let the witness just 17 A That's what I remember as well. 17 read it first a second, just flip through the 18 Q Okay. So my question is, did you --18 pages. 19 prior to submitting this independent report on 19 MR. TISI: Oh, she can certainly do 20 behalf of the industry by a group called 20 that, Tom. 21 Meta-Analysis Research Group, did PCPC do any due 21 BY MR. TISI: 22 diligence as to who Meta-Analysis Research Group 22 Q And I'm going to ask you on the -- about 23 is and what their focus was? 23 the brochure that's attached on page 5. 24 A I -- I think the assumption was that 24 A (Peruses document.) 25 they were doing meta-analysis, which I know is 25 Q Since you took the time to read it, let

14 (Pages 428 to 431)

Page 432 Page 434 1 1 me just ask you the question. Do you see that litigation? 2 this is a proposal to write two papers, one on 2 A I'm not sure. I knew that Dr. Muscat 3 meta-analysis on diaphragms and one a critical 3 was deposed, but I don't -- I don't think that's 4 review of the talc literature? 4 the same as what you're asking. 5 5 A Yes. Q And so my question to you is, did it 6 Q Okay. You know that they did publish 6 matter to you when you were submitting this on 7 two articles relating to that very specific --7 behalf of -- to the FDA as to whether or not these 8 those two specific topics, correct? 8 consultants who -- were basically people who would 9 A I believe so, yes. 9 be involved in litigation? 10 10 MR. LOCKE: Objection. Do you mean --Q Okay. And so this is a proposal by --11 by Dr. Huncharek to write such articles to 11 BY MR. TISI: Mr. Glenn, who I will represent to you was with Q Did you think about that? 12 12 13 the lawyers for Crowell & Moring for Imerys. 13 MR. LOCKE: Do you mean -- when you say 14 "this," you're referring to Exhibit 43, the A Okay. 14 15 Q Okay. Attached to that is a brochure 15 comments? 16 from the Meta-Analysis Research Group. Do you see 16 MR. TISI: Correct, in 2009. 17 that? 17 BY MR. TISI: 18 A I guess this is --18 Q Did you want to know -- did you even 19 MR. LOCKE: Page 5. 19 think to know whether or not these witnesses, 20 THE WITNESS: Okay. Okay. 20 Dr. Huncharek and Dr. Muscat, would be considered 21 21 or groomed for being experts in litigation? 22 Q Okay. This is a brochure. Did you 22 MR. LOCKE: Objection. 23 ever -- I think I -- I asked you before, but did 23 THE WITNESS: That's not --MR. LOCKE: Objection. Did you mean to 24 you ever ask -- first of all, the report that was 24 25 filed on behalf of the FDA, I believe your answers 25 say "these witnesses"? Page 433 Page 435 1 to interrogatories said it cost about \$50,000. 1 MR. TISI: These -- yes, these doctors. 2 A I think that's correct, yeah. 2 THE WITNESS: We hired them for their Q Okay. Did PCPC pay that or did J&J? 3 3 epidemiological expertise, and they're -- they 4 A I believe we did. 4 were not always favorable to us. I mean they 5 Q Okay. "We" meaning PCPC? 5 also -- Dr. Huncharek published on hair dyes, and 6 A I'm sorry. PCPC. 6 it was -- it was not favorable. So we -- we 7 Q On behalf of the talc industry? 7 consider them to be fair, and their scientist 8 A Yes. 8 arguments would stand. 9 Q And one of the things that the 9 BY MR. TISI: 10 Meta-Analysis Research Group identifies in the 10 Q Okay. Had you ever heard discussed --11 first paragraph that they do is they assist major 11 now I'm asking you as Linda Loretz -- had you ever 12 pharmaceutical companies and other clients in, 12 discussed that if this case went into litigation 13 quote, deciphering often complex, seemingly 13 that Drs. Huncharek and Muscat would be 14 contradictory, data using rigorous meta-analysis 14 consultants or experts? 15 methods. 15 MR. LOCKE: Objection. 16 Do you see that? 16 THE WITNESS: No. 17 17 BY MR. TISI: 18 Q Okay. Do you know that Meta-Analysis Q Do you see on the next page that it also 18 19 provides medical and legal consulting in Research Group went out of business shortly after 19 20 20 litigation? this --21 A That's what it says, yes. 21 A I don't know. I did not know that. 22 Q The expert witnesses. Do you see that? 22 Q Do you know that they became paid 23 23 litigation experts in 2010? A Yes. 24 Q Do you know that both Dr. Huncharek and 24 A No. 25 Dr. Muscat became expert witnesses in talc 25 Q Now, are you aware that in 2011, after

15 (Pages 432 to 435)

Page 436 Page 438 1 the filing of this report to PCPC, that they took 1 talking about before. 2 their analysis that was paid for by PCPC and then 2 And it's on page 3 of the report, 3 made some modifications, but for the most part, 3 page 6 -- 6 of 9 of the letter. Do you see that? 4 published it as it was in the -- in the 4 5 5 literature? Q Okay. The Introduction says: "On б 6 May 13th, 2008, Samuel Epstein, MD, chairman of MR. LOCKE: Objection. 7 THE WITNESS: I'm -- I think I'm aware 7 the Cancer Prevention Coalition, submitted a 8 that there was a publication, but, no, I did not 8 Citizen's Petition to the Commissioner of the Food 9 9 know that was happening until after the fact -- we and Drug Administration seeking placement of a 10 did not know that that was happening until after 10 cancer warning label on talc products. The 11 the fact. 11 petition requests the Commissioner of the Food and Drug require that all talcum powders bear labels 12 (Exhibit No. 45 was marked for 12 13 identification.) 13 with warnings such as 'Frequent application of 14 talcum powder in the female genital area 14 BY MR. TISI: 15 Q I'm going to show you what I've had 15 substantially increases the risk of ovarian 16 marked as Exhibit No. 45. 16 cancer." 17 And this is a --17 Did I read that correctly? 18 (Phone interruption.) 18 A That's what it says. BY MR. TISI: 19 Q Okay. The second paragraph -- so that 19 just -- and that's true, that that's -- that 20 Q This is an article that I will represent 20 21 to you is very close to, if not identical in many 21 paragraph is true, that's what Epstein did. paragraphs, to the report that was filed on behalf 22 22 A I would say yes. of PCPC. Have you seen this before? Q Okay. Second paragraph is -- is your 2.3 23 24 A I've -- yes. 24 response or the summary of your response. 25 Q It was published in 2011. Correct? 25 "Given the multiple implications of such Page 437 Page 439 1 A Accepted April 2011, so -- yes. 1 warning labels, the Personal Care Products Council 2 Q Do you know -- do you know that there 2 sought an evaluation of the validity of the 3 was a -- actually a proposal to -- made to Imerys 3 scientific facts underlying this request. The that -- to turn this paper, "this" meaning the 4 Meta-Analysis Research Group was retained to 4 5 report that was submitted by PCPC in July of 2009, 5 provide an independent review of the relevant 6 into a publication? 6 data. Below are the findings of that review." 7 7 A No. We were not involved. Do you see that? 8 8 Q Okay. If you look at the back of the A Yes. 9 article, do you know -- does it acknowledge PCPC 9 Q I'm curious about the statement saying as having paid for this report? 10 10 "the multiple implications of such warning A No. labels." Do you see that? 11 11 12 Q Is there anything in that acknowledgment 12 A Yes. that would indicate that at the time that this 13 13 Q Can you tell us on behalf of the PCPC 14 article was published that they were paid 14 what the multiple implications of the warning litigation experts for the lawyers representing labels are that you were referring to? 15 15 Johnson & Johnson? MR. LOCKE: Objection. Obviously this 16 16 17 MR. LOCKE: Objection. 17 was written by doctors --THE WITNESS: No, not any 18 MR. TISI: I'm -- I'm -- I am --18 BY MR. TISI: 19 acknowledgments. 19 20 20 Q What are the multiple implications that BY MR. TISI: 21 21 were being considered there? Q So let's put this on our timeline here, 22 2011. And I'll put "H&M publication, 2011." 22 A Again, this -- this was written not by us. I mean, I think it's pretty obvious that that 23 Now, let's go back to the report that 23 was filed with the FDA. And I would like to go would have -- could have an impact -- I mean, 24 24 25 back to the Introduction section that we started 25 again, we didn't think a label was -- should be

16 (Pages 436 to 439)

Page 440 Page 442 1 required because we -- because of the science 1 than stating what Dr. Epstein did, the first --2 behind it we believe was not supported, but 2 first sentence of that paragraph, you say that 3 3 obviously would have an impact on -- on the the -- that your consultants on your behalf say: 4 product if -- if it were. 4 "Given the multiple implications on such a warning 5 5 Q Okay. The "impact on the product," what label, the Personal Care Products Council sought б 6 an evaluation of the validity of the scientific do you mean? 7 A Well, we -- we -- I mean it --7 facts underlying this request." 8 8 So this statement is the predicate of Q Well, let me ask --9 A We don't think it should have a warning 9 why the PCPC got this report in the first place, 10 if it's -- if we don't believe that it --10 correct? 11 Q Let me ask you some -- I didn't mean to 11 A Sure. 12 interrupt you. Go finish, if you'd like. 12 Q Okay. And so the predicate was that 13 A No, just that if -- because we didn't --13 there were multiple implications of that warning, of a warning, should it be required. And this, to 14 we don't believe that the science shows causation, 14 we just did not believe you have a warning to be clear, is a request that warning labels be 15 15 16 scare people off of something if it's not real. 16 mandated. Correct? 17 Q Okay. So let me ask you -- I understand 17 A Correct. 18 your position that you did not think the evidence 18 Q And you were aware that companies can 19 supported a causal inference. 19 and in fact have voluntarily added a warning, 20 Putting that issue aside, the company 20 correct? 21 through its consultants assert -- make an 21 A Sure. 22 assertion that warnings labels would have 22 Q Okay. So this is different than that. 23 implications. Do you see that? 23 I mean companies can voluntarily add a warning. 24 A Yes. 24 25 Q And not only implications, have multiple 25 Q But this is in the absence of a company Page 441 Page 443 1 implications. Correct? 1 voluntarily adding a warning, they're going right 2 A That's what it says. 2 to the FDA and saying, The companies are not doing 3 Q Okay. And I'm curious as to what those 3 it, and we're going to ask you -- require you to 4 implications were from your perspective, from the 4 do it. Correct? 5 5 PCPC's perspective. A Yes. 6 Was there concern ever expressed that 6 Q All right. And the PCPC, as a predicate 7 adding a warning would have an impact on the 7 for opposing that requirement, laid out that there 8 members of the PCPC? You've heard that, correct? 8 are multiple implications to requiring that 9 9 warning. Correct? A Yeah, again --10 10 MR. LOCKE: Objection. Q Okay. 11 11 THE WITNESS: That's what it says, yes. A -- I think the reason that -- we would 12 not want that, though, is because we do believe 12 BY MR. TISI: the science doesn't support the need for a Q All right. And the multiple -- the 13 13 14 14 implications are -- I mean let's -- let's -- I'm warning. 15 Q I -- I understand. 15 going to lay out some for you and ask you whether they were things that were discussed at the time. 16 A It has to be part of the context of my 16 Was one of the implications that it 17 answer. 17 Q I'm going -- Doctor, I'm going to ask 18 would affect the commercial interests of the 18 you a lot about this document, okay? And we're 19 19 members of the PCPC? going to go through it probably more than you want 20 A With the context being that we did not 20 21 21 to. Okay? believe that it truly had this risk, you do not 22 A Sure. 22 want to affect sales and so forth without --23 O But before we do, I want to understand 23 O Okav. 24 24 A -- if it's -- if there's no reason for the context in which it's written. Okay? 25 And in the very first paragraph, other 25 having a warning.

17 (Pages 440 to 443)

Page 444 Page 446 A Yes. 1 Q Understood. We're going to talk about 1 2 the reasons. 2 Q All right. And so what I'm trying to 3 3 explore with you is what potential -- and I'll put A Okay. 4 Q I just want to know the implications. 4 it right on the table -- what potential biases 5 5 might have been present when this opposition was 6 Q Right? 6 sent to the FDA. Okay? 7 A Yep. 7 A Okay. 8 8 Q So the first implication would be -- and Q All right. So we'll talk about the science and we'll talk -- but before we talk about 9 I will write it on here, "Implications of 9 10 the science, I want to talk about the prism 10 warnings. 1. Sales." 11 Had you ever heard in the context --11 through which you looked at the science. Okay? since there were multiple implications, had you 12 12 A Okay. 13 ever heard in the context that providing a warning 13 Q And one of the things that was a concern after this being in the medical literature for 25 to the members, we talked about sales. Had you 14 14 15 years would open up members to the potential -ever heard of any concerns about litigation? 15 16 for the reason why we're all here today, potential 16 A I can tell you that was not something we 17 lawsuits? 17 ever discussed. 18 18 Q Okay. Is it something you understood? A No. 19 19 Q You never heard that? A Sure. At some level, of course. Q Okay. And if sales -- people stop 20 MR. LOCKE: Objection. 20 21 THE WITNESS: We never talked about 21 selling talc, and use corn starch, for example, instead of talc, that may impact the membership of 22 22 that. the PCPC as well, correct? 2.3 BY MR. TISI: 23 24 O Never talked about that at all? 24 MR. LOCKE: Objection. 25 A No. 25 THE WITNESS: I mean I didn't -- no, Page 445 Page 447 1 Q You never heard that -- that adding a 1 that's not -- that's not what I thought. I mean 2 warning might -- might raise -- might cause people 2 to me that -- that wouldn't really make sense. I 3 to bring claims such as this? 3 mean if you have a product that's corn starch 4 4 instead of talc, it's still a product. So I don't A We just talked about the science. 5 5 Q I'm not -- I'm going to talk about the think that's really relevant. 6 science in a moment, okay? We're going to get to 6 BY MR. TISI: 7 7 Q Right. But Imerys -- Imerys doesn't the science. 8 8 manufacture corn starch, do they? But oftentimes -- you're aware as a 9 scientist that oftentimes the reason why we do 9 A No, but I -- I guess --10 10 Q So they would fall out of the -- they disclosures in medical and scientific literature 11 is so that people could understand the biases or might fall out of the PCPC, correct? 11 12 potential biases or potential conflicts of 12 A I don't -- no, I never thought about, 13 interest that the authors might have, correct? and I don't think -- I never ever heard anybody 13 14 MR. LOCKE: Objection. 14 mention that. THE WITNESS: Say it one more time. 15 15 Q Any of the -- any other -- since there were multiple implications, any other implications 16 BY MR. TISI: 16 you could think of as to why you sought to get 17 O Medical articles oftentimes come with 17 18 18 this independent evaluation to submit to the FDA disclosures about affiliations, conflicts of 19 19 in opposition to letting women know there was a interest. 20 20 potential for ovarian cancer based upon the A Sure. 21 21 Q And the reason why we do that -literature? 22 22 A Yes. A I think given --23 Q -- is so that people reading those 23 MR. LOCKE: Objection. articles can understand why -- perhaps biases that 24 24 THE WITNESS: -- given our position that the authors bring to the table, correct? 25 25 we don't believe there is a causal role, I don't

18 (Pages 444 to 447)

Page 448 Page 450 1 think you want to put warnings on products 1 literature on ovarian cancer? 2 suggesting that there's some harm when there's 2 A No. 3 3 not, scaring people or having people think that Q Okay. Since 2009, did PCPC ever discuss 4 some harm that they've experienced has something 4 with its members whether or not its members should 5 5 to do with this when in fact it doesn't. voluntarily add an informational label or warning 6 6 label about perineal dusting with talcum powder BY MR. TISI: 7 Q So you were concerned about scaring 7 products? 8 8 people. With baby powder. A No. 9 A Yeah, a warning is --9 Q Do you know that some talcum powder 10 10 Q Okay. products have in fact voluntarily added warnings 11 A -- is a scary thing, sure. 11 or information about the potential risk of talcum Q And if -- if a woman was told that --12 12 powder products? 13 that talcum powder products, and we talked about 13 A I didn't know that, but --14 this for 25 years that was being discussed in the Q Are you familiar with a company called 14 15 medical literature, if they were concerned by 15 Belk -- Belcam Inc.? 16 that, there were other alternatives on -- on the 16 A No. 17 shelves, right? There was corn starch, correct? 17 Q Greenbriar? 18 MR. LOCKE: Objection. 18 A No. 19 THE WITNESS: Yeah, again, the context 19 O Assured? 20 to me is that if we did not believe that it was a 20 A No. 21 real risk, that's where you don't want to warn. 21 Q Okay. There are members -- there are 22 22 people who actually manufacture talcum powder BY MR. TISI: 23 23 Q And -- well, but that's my reason why I products that are not members of the PCPC, 24 asked you before what the standard was. If the 24 correct? 25 standard was -- is the standard for warning that 25 A I would assume so. Page 449 Page 451 1 you have to be convinced of a real risk? 1 Q Are you aware that some manufacturers 2 MR. LOCKE: Objection. 2 have stopped selling talcum powder products 3 BY MR. TISI: 3 altogether and use -- and just have decided to use corn starch, correct? Do you know that? 4 Q Or that there may be a risk. What is 4 the standard for a warning, and did you even know 5 5 MR. LOCKE: Objection. THE WITNESS: I guess I don't know that, 6 at the time you sent this to the FDA? 6 7 7 MR. LOCKE: Objection. but I could find it plausible. 8 THE WITNESS: Again, I would just say 8 BY MR. TISI: 9 there were people within -- within PCPC who know a 9 Q Okay. Let's get back to the response to 10 lot more on this topic than I do, and --10 the Citizen's Petition. 11 BY MR. TISI: 11 Do you know -- we mentioned before, and 12 Q Did they --12 I just want to make sure that we understand, this PCPC response was actually commissioned by 13 A -- the awareness of --13 14 Q Did you send this to the lawyers at the 14 Johnson & Johnson in 2008, correct? 15 PCPC, this letter? 15 A I believe they started the process 16 A This -- I can't recall exactly who read 16 rolling, yes. 17 it, but I can tell you that certainly, you know, 17 Q Well, it's more than starting the everything that -- when things like this happen, process. The report was actually written for J&J. 18 18 19 they are -- it's known without the associate --19 A I -- I -- yeah, I think when we got it, 20 throughout the association at the higher levels. 20 it was -- it was --21 Q Now, prior to this time, did the PCPC 21 Q It was pretty --22 ever discuss either with the FDA or whether or not 22 A The report had been -- was in pretty 23 it's members should voluntary add a warning or 23 good shape, yes. 24 24 Q It was -- it was pretty much written by precaution or informational statement about 25 cosmetic talc and the current state of the 25 the time you got it.

19 (Pages 448 to 451)

Page 452 Page 454 submission, this was submitted by a PCPC employee 1 A I believe so, yes. 1 2 Q Did you understand this was a 2 by the name of John Bailey. I want to talk to you 3 collaborative response by J&J and Imerys 3 a little bit about who John Bailey is and was. 4 4 A Okay. primarily? 5 5 A I'm not sure that I did. Q Who is John Bailey? 6 6 A He -- at the time of this, he was the Q Did other manufacturers -- there are 7 other manufacturers of talcum powder products, 7 vice president of science -- the science 8 8 correct? department. He was my boss -- or, rather, the 9 A There are certainly other people on our 9 executive vice president of the science department 10 Talc Task Force or the people with an interest in 10 at PCPC. 11 talc. 11 Q Okay. He previously worked at the FDA, 12 Q Do you know --12 didn't he? 13 A Other companies, rather. 13 A He did. Q Do you know that -- whether they had 14 14 Q And in fact, he was hired directly from input into this PCPC response, or was it primarily 15 the FDA by PCPC. 15 16 a J&J, with the assistance of Imerys, production? 16 A That's correct. 17 A I believe we would have sent it to other 17 Q Okay. And at the time that he left the 18 people with interest. I mean, that's our normal 18 FDA in December of 2001, he was with what division, do you know? 19 process. 19 20 Q Do you know whether that was happening? 20 A Office of Cosmetics and Colors. 21 A I mean, I don't, but that would be our 21 Q And at that time in 2001, the NTP had 22 22 actually deferred consideration of talc as a -- a normal process. 23 23 (Exhibit No. 46 was marked for carcinogen, correct? A Yes. 24 identification.) 24 25 BY MR. TISI: 25 Q Okay. And when we say "deferred," I Page 453 Page 455 1 Q So I'm going to show you what I've had 1 want to stop and pause on that for a moment 2 marked as Exhibit No. 46. And it's a date -- and 2 because it -- I just want to make absolutely 3 you're not on this, but I'm doing this just to 3 clear, and we'll talk about this in a moment. 4 kind of see if I can hone in the time frame. 4 They deferred the question, they did not 5 This is an e-mail from Kathleen Wille. 5 decide the question. 6 Do vou know who Kathleen Wille is? б A That's what -- that was under the 7 A Yes. 7 official, what they did, yes. 8 8 Q Okay. She works with J&J? Q Okay. And so in that context, PCPC just 9 A Yeah, I'm not sure if she's still there, 9 immediately following that -- well, when it was 10 10 deferred, there was an understanding that the but yes. 11 Q And it's entitled "Response to Citizens issue might come up again. 11 12 Petition on Talc, Latest Review of the Data," and 12 A Yes. 13 its attachment is a J&J report. Do you see that? 13 Q And in fact, it did come up again, 14 14 correct? A Yes. 15 Q Okay. And it says: "This is the report 15 A Kind of. that we will -- that we will submit to FDA in 16 16 Q It came up with IARC? response to the Citizen's Petition. We originally 17 17 A Oh, it came up in other contexts, sure. 18 commissioned the work; however, the trade Q Came up in IARC? 18 19 association will be the submitter." 19 A Yes. 20 Q This issue -- and again, it bears Is that an accurate statement of what 20 21 happened? 21 repeating because I want to make sure -- at all 22 A I don't know, but I'm -- well, yes, they 22 times on this continuum, on this timeline, the 23 commissioned it, and we -- we submitted it, that's 23 issue of talcum powder products causing or 24 24 contributing to ovarian cancer was an active correct, yes. 25 Q Okay. Now, going back to the actual FDA 25 debate. Sometimes more active, sometimes less

20 (Pages 452 to 455)

Page 456 Page 458 1 active. But this was something that was a concern 1 MR. LOCKE: Objection. 2 to your members throughout the entire time of this 2 THE WITNESS: Yes. 3 3 timeline. BY MR. TISI: 4 MR. LOCKE: Objection. Form. 4 Q And he was -- he was going to the very 5 5 THE WITNESS: It was being talked about same office that he ran, correct? 6 б by someone. A In -- at that meeting there was more 7 BY MR. TISI: 7 than just the Office of Cosmetics and Colors. 8 8 Q Right. And so in the context of hiring Q Well, we're going to talk about that. 9 Dr. Bailey, he was hired by -- by PCPC from the 9 But -- but the people who were -- the vast 10 10 division of the FDA, the Office of colors -majority of the people at that FDA employees were 11 Cosmetics and Colors --11 people from the Office of Cosmetics and Colors. 12 A Cosmetics and Colors. 12 A I'm not sure about the vast majority, 13 Q -- that would interact with the cosmetic 13 but certainly there were people there, and that --14 industry on talc issues, correct? that may well be right. 14 A As well as many other issues, yes. Q Including Dr. Katz. 15 15 16 Q Right. And the person who took over was 16 A Dr. Katz was there. 17 a Dr. Katz? 17 Q And I want to put this on a timeline in 18 18 a moment, but Dr. Bailey left PCPC after this A Yes. 19 Q And Dr. Katz worked for Dr. -- had 19 petition -- this opposition was -- was correct, filed? 20 worked for Dr. Bailey at the time, correct? 20 21 A I actually don't know that. 21 A He's -- he left, yes. I'm not sure 22 Q All right. And he was the director of 22 exactly -- the exact year, but yes. Q About 2011 -- 2010, 2011? 23 that office, correct? 23 24 A That's correct, yes. 24 A That sounds roughly right. 25 Q And when he left FDA in December of 25 Q Okay. So before we discuss the science Page 457 Page 459 1 that was provided by PCPC, and I told you we would 1 2001, he became -- he was hired in January of 2002 2 by PCPC. 2 do that, let's see if we can pause here and put 3 A I couldn't confirm those dates, but --3 together -- fill out our timeline a little bit 4 4 Q Okay. And he interacted with the -- and about the context of everything that happened. 5 5 we're going to talk about this -- he's writing the First of all, we talked about the fact 6 response to this petition that would go to the 6 that talcum powder products may cause or 7 very same division, the Office of Cosmetics and 7 contribute to ovarian cancer was a concern since 8 8 the early 1980s and it was debated throughout the Colors, that actually he ran while he was at the 9 FDA. 9 entire time, correct? 10 A Yes, although I think the heart of our 10 MR. LOCKE: Objection. 11 submission is the scientific analysis. 11 THE WITNESS: There were ongoing 12 Q Right. 12 happenings related to that topic, yes. A Not the cover letter, but the --13 13 BY MR. TISI: Q Okay. Can we say -- can we use the word 14 O But the cover letter -- the cover 14 15 letter -- well, let's -- let's call it what it is. 15 "consistent" here? It was a consistent topic of 16 He actually sent the letter and he actually met 16 discussion in the medical and scientific with you -- with you at the Office of Cosmetics 17 17 community? and Colors before this was filed in July. 18 18 A There were a number of publications, but 19 19 A Oh --I mean not every --20 20 Q I mean I'm not saying you woke up in the Q There was a meeting at the FDA --21 A Correct. 21 morning and discussed it. I'm saying that within 22 Q -- where you and Dr. Bailey went to the 22 this topic was a topic that was -- it wasn't just 23 FDA, previewed this document that Dr. Huncharek 23 a flash in the pan. It was something that was 24 24 discussed over the -- over this 25 years and Muscat had provided, and then filed it 25 subsequently, correct? 25 represented by this chart.

16 Q Okay. So can we write "Active debate 16 MR. LOCKE: Yes.	,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,
17 between scientists." Is that okay? 17 BY MR. TISI:	
18 A Okay. 18 Q Now you see why I used	1994 is on my
19 MR. LOCKE: Objection. 19 A Mm-hmm.	
20 BY MR. TISI: 20 Q on my timeline here.	
21 Q Is that accurate? 21 A Yes, right, but the the	workshop.
22 MR. LOCKE: Same objection. 22 yes.	.,
23 THE WITNESS: I I suppose. 23 Q Okay. And this was a we	orkshop dated
24 BY MR. TISI: 24 April 12th, 1994, correct?	
25 Q Okay. All right. So, for example, some 25 A Yes.	
Page 461	Page 463
1 like Dr. Cramer or Dr. Epstein on one hand thought 1 Q Okay. It's actually writter	
2 there was that there was evidence of a causal 2 Stephen Gettings?	- <b>,</b>
3 association, and some people like Huncharek and 3 A Yes.	
4 Muscat thought there was not. 4 Q Who is Dr. Gettings?	
5 MR. LOCKE: Objection. 5 A Dr. Gettings was my pred	ecessor.
6 THE WITNESS: There were different 6 Q All right. And this is a re	
7 opinions, yes. 7 meeting amongst this is the Tale	_
8 BY MR. TISI: 8 Party Task Force. Among other the	
9 Q Based on the same literature. 9 Johnson and the predecessor for I	-
10 A Yes. 10 there.	
11 Q Okay. Now, another point before we put 11 A Yes.	
12 things on a timeline, the PCPC knew that the FDA   12 Q Okay. And I'm going to c	come back to
had been concerned about the issue since at least 13 this in a minute when I talk about	
the 1990s, correct? 14 which we talked about, which is s	
15 MR. LOCKE: Objection. 15 A Okay.	
THE WITNESS: They responded before, 16 Q But but I'm just concern	ned with point
17 yes. 17 number 1. It says: "It was noted to	_
18 BY MR. TISI: 18 still appears to be concerned with	
19 Q But they were concerned about the issue. 19 ovarian cancer as evidenced by th	
20 MR. LOCKE: Objection. 20 the NTP."	
21 THE WITNESS: I I guess, yes. I 21 Do you see that?	
22 mean 22 A Yes.	
1 = 11 100.	in data
	is date,

22 (Pages 460 to 463)

Page 464 Page 466 was talking before, people can look at the same 1 A Okay. 1 2 Q Is that accurate? 2 evidence and come to different conclusions, 3 A I'm going to say yes. 3 correct? 4 Q Okay. So let's put this on our timeline 4 A I think there was some different 5 here, 1994. And this would be "Task force with 5 evidence. I think it really was bringing forth б the FDA, concern about ovarian cancer." б some things that were mistaken in the draft 7 By the way, ovarian cancer, this is not 7 report, particularly regarding mineralogy and --8 8 a trivial issue, is it? and so forth. 9 A No. 9 Q Right. And one of the things -- one of the things that was the basis of the deference is 10 O And ovarian cancer is a -- ovarian 10 11 cancer is -- affects 20 -- 20,000 -- 20,000 women 11 that there was not a clear understanding of what a year get diagnosed with ovarian cancer, correct? at that time was in talcum powder products. 12 12 13 A Yes. 13 MR. LOCKE: Objection. THE WITNESS: I think there wasn't 14 Q It has a high mortality rate. Correct? 14 A Yes. Yes. 15 also -- there was not a clear definition of -- in 15 Q Very serious. 16 fact, when they wanted to look at it again or 16 17 A Absolutely. 17 considered looking at it again, they changed the Q And by contrast, baby powder is not a 18 18 name of what they were going to look at, because necessary pharmaceutical, correct? 19 it was hard -- it was not clear what they were 19 trying to look at, and that was something that got 20 MR. LOCKE: Objection. 20 21 BY MR. TISI: 21 discussion at the NTP, and I think that made a 22 22 Q Is it fair to say you can live without difference and explains part of why there were baby powder? different conclusions from the first two review 23 23 24 MR. LOCKE: Objection. Beyond the 24 groups. 25 25 BY MR. TISI: scope. Page 467 Page 465 1 BY MR. TISI: 1 Q All right. And the third review group 2 Q Talcum powder. 2 was not unanimous, was it? 3 A Yes. 3 A They -- they did do a vote. I -- I've 4 been calling it seven to three against listing, 4 O Now, in 2000, we have the NTP 10th 5 5 and then they -- and then they decided to defer Report on Carcinogen, and we talk about the word 6 "defer." 6 because there were --7 7 And I want to write that clearly because Q And again, that's -- that's -- that's the kind of example that I'm talking about of even 8 my handwriting is terrible. 8 9 Okay. And they deferred the question. 9 if it was seven to three against listing talc, 10 A They did. They did vote. They voted, 10 there were three people who thought that it should but then they deferred. 11 11 be listed, correct? 12 Q Right. 12 A Sure. 13 A But they voted against listing seven to 13 Q So this is -- this is kind of 14 three, but then they deferred. 14 crystalizing what we've been talking about, which Q Well, there were different -- okay. is different scientists can look at the evidence 15 15 Since you raised that, let's -- you knew this was and reach different conclusions, true? 16 16 going to happen. I was not going to get into it, A Yes. 17 17 18 but let's -- let's -- there were three committees 18 Q And in fact, did reach different 19 that looked at the -- looked at this, correct? 19 conclusions, correct? 20 20 A Mm-hmm. A Yes. 21 21 Q Two of them voted in favor of listing. Q All right. Okay. So we put that on our 22 22 timeline here. A That's correct. 23 Q And one voted against, correct? 23 Now, prior to that last discussion --24 24 prior to that deferral, that last meeting, the Α Yes. 25 Q Okay. And that's kind of the issue I 25 PCPC actually drafted or commissioned a report,

23 (Pages 464 to 467)

Page 468 Page 470 1 correct? 1 that at the actual meeting, but I -- that's what I 2 A You mean -- to be submitted to the 2 recall. I think we walked away knowing where they 3 NTP --3 came out, but I -- I could be wrong on that, but, 4 4 yes, it was confirmed then. Certainly. Q Yes. 5 5 A -- for the meeting? Yes. (Exhibit No. 49 was marked for 6 Q Yeah. And I'm just going to identify б identification.) 7 it because I don't want to go into it, but -- but 7 BY MR. TISI: 8 here is a copy of the actual letter, Exhibit 8 Q Okay. And I'm going to hand you Exhibit 9 No. 48. 9 No. 40 -- 49. And this is the Code of Federal Regulations dated 2005. But if you look at the 10 (Exhibit No. 48 was marked for 10 11 identification.) 11 back, the last page with a 12 Bates stamp at the 12 12 BY MR. TISI: end. 13 Q And one of the things that the -- and 13 A Okay. 14 this would have been -- we'll put it on our Q And it says the basis was the NTP 14 timeline, this would have been December of 2000 15 deferred -- do you see that "Basis for 15 16 and -- 2000. So we will put "PCPC CFTA 16 nomination"? 17 17 submission." A Yes. 18 And the only reason I bring this up is 18 Q It says: "The NTP deferred 19 Dr. Muscat is the very same doctor who -consideration of listing talc asbestiform and 19 20 Dr. Muscat wrote a report that was submitted to 20 non-asbestiform talc in the 10th RoC because its 21 NTP, correct? 21 2000 review of talc found that there's been 22 22 considerable confusion over the mineral nature and A That's correct. 23 23 Q All right. And it's the very same consequences of talc, both containing asbestiform 24 Dr. Muscat that wrote the report with -- which was 24 fibers and not containing asbestiform fibers." 25 a Citizen's Petition with Dr. Huncharek. 25 Do you see that? Page 469 Page 471 1 1 A It is. A Yes. 2 Q Okay. So we're going to put "Muscat" 2 Q It further says: "It became evident 3 3 that the literature on both forms of talc with few 4 Now, Dr. Muscat was actually recommended 4 exceptions provide inadequate characterization of 5 to the PCPC by Johnson & Johnson, correct? Back 5 the adequate material under study," and you see --6 in 2000. 6 and it just continues from there. 7 7 A I think that's correct. Do you see that? 8 A Yes. 8 Q So I don't have to use a document. Is that correct? I'm happy to use the document, 9 9 Q Okay. And so the question at that point 10 but -was deferred because there was a question as to 10 A Okay. Then I'm going to say I think --11 11 what was cosmetic talc. 12 yes, I believe that's correct. 12 A Well. I mean this is where it was Q Okay. We just cut ourselves five 13 13 withdrawn. 14 minutes, so --14 Q No, withdrawn --15 A Yea. 15 A This is 2005. 16 Q All right. And just to kind of put it 16 Q 2005. But in the basis for -- it talks 17 again on our timeline, when did the -- when did 17 about what happened in the -the NTP defer the issue of whether or not talc was A Oh, the deferral that they're referring 18 18 19 a carcinogen? 19 to, yes, correct. 20 Q Okay. All right. And then in 12, in A I believe they actually did it at their 20 21 actual meeting, which was in December of 2000. 21 the -- it was renominated in 2004, correct? 22 Q 2000. And -- you became aware of the 22 A Right. 23 actual deferral in the CFR? The Code of Federal 23 Q Right. And so I'm going to put year 24 Regulations actually lists it as being --24 "2004," I'm going to put "renominated NTP." NTP. 25 A Yeah, I mean I -- I thought they said 25 My handwriting is terrible.

24 (Pages 468 to 471)

	Page 472		Page 474
1	And but at that time it the IARC	1	possible, correct? To be.
2	had also taken up the issue, correct?	2	A Yes.
3	A I'm not sure when I learned about IARC	3	Q Now, in 2005, you know that Dr. Muscat
4	taking up the issue, but I think they I mean,	4	and Huncharek were retained by Imerys and a law
5	so I'm not sure.	5	firm to write a meta-analysis and a review paper
6	Q Okay. And IARC is what?	6	on tale, correct?
7	A International Agency for Research on	7	MR. LOCKE: Objection.
8	Cancer.	8	THE WITNESS: I don't think I knew that,
9	Q Is it a reputable organization?	9	no.
10	A It's an arm of the World Health	10	MR. TISI: Okay. Let me show you what I
11	Organization.	11	would like to have marked as Exhibit No. 50.
12	Q Is it one that in your view is one that	12	(Exhibit No. 50 was marked for
13	is does good science?	13	identification.)
14	A They have I mean, it's	14	BY MR. TISI:
15	Q You may disagree with them on occasion,	15	Q And I'm not concerned with the top
16	but do they do good science?	16	e-mail because that's not to you, but the bottom
17	A It's a closed process, and I think	17	e-mail is to you, correct?
18	they're considered reputable. It is a very closed	18	A Yes.
19	process.	19	Q Okay. It's from Robert Glenn?
20	Q When you say "closed," they don't have	20	MR. LOCKE: Let's let
21	people from industry who come in and and	21	MR. TISI: I'm going to. I'm just going
22	participate, correct?	22	to
23	A Well	23	MR. LOCKE: the witness just read it.
24	Q People affiliated with industry cannot	24	MR. TISI: I'm going to have to I'm
25	sit on the panels, correct? There are limitations	25	just going to direct her to what it is before we
23	sit on the paners, correct: There are minitations	23	just going to direct her to what it is before we

1	MR. TISI: Actually, would this be a	1	cancer."
2	good time for a break?	2	Do you see that?
3	MS. FRAZIER: Yes.	3	A Yes.
4	MR. TISI: For you, I will do almost	4	Q Okay. So it's talking about two
5	anything.	5	different papers, right?
6	THE VIDEOGRAPHER: All right. Off the	6	A Yes.
7	record, Counsel?	7	Q Okay. So does this refresh your
8	MS. FRAZIER: Thank you.	8	recollection as to whether or not you were aware
9	THE VIDEOGRAPHER: The time is 10:43	9	in the 2000s that Huncharek and Muscat were
10	a.m. We're going off the record.	10	actually consultants for the law firm representing
11	(Recess.)	11	Imerys, which is is Luzenac.
12	THE VIDEOGRAPHER: The time is 10:58	12	A I would say this would refresh my
13	a.m., and we are back on the record.	13	memory, yes.
14	BY MR. TISI:	14	Q Okay. So we have on our chart here in
15	Q Dr. Loretz, have you had an opportunity	15	2005 2006 is IARC review, 2005 and I'm going
16	to look at Exhibit No. 50, the e-mail from	16	to try to write real because on a break folks
17	Mr. Glenn at Crowell & Moring?	17	told me my handwriting was abysmal. So we have
18	A Yes.	18	"Huncharek, Muscat, two papers." One a review
19	Q And Mr. Glenn worked for Crowell &	19	and, two, diaphragm.
20	Moring, but you know that he's a toxicologist,	20	Is that correct? That's what that
21	correct?	21	document says?
22	A I probably knew that at the time.	22	A What year are you putting that
23	Q Okay. And do you know that he was	23	Q 2005.
24	also previous to working for the law firm	24	A Or it looks those yeah, I don't know
25	representing Imerys, do you know that he was also	25	when the publication date, though.
	Page 477		Page 479
1	a prior president of the Industrial Minerals	1	O Right. The publications, actually you
1 2	a prior president of the Industrial Minerals Association of North America?	1 2	Q Right. The publications, actually you know that they they actually published two
	• •	1 2 3	know that they they actually published two
2	Association of North America?  A I don't that doesn't sound familiar.	2	know that they they actually published two articles bearing on the very same topic
2	Association of North America?  A I don't that doesn't sound familiar.	2 3 4	know that they they actually published two articles bearing on the very same topic subsequently.
2 3 4	Association of North America?  A I don't that doesn't sound familiar.  Q Okay. So it talks to Mark Ellis at IMA	2 3	know that they they actually published two articles bearing on the very same topic subsequently.  A Yes, exactly.
2 3 4 5	Association of North America?  A I don't that doesn't sound familiar.  Q Okay. So it talks to Mark Ellis at IMA  North America and to yourself.  And I'm interested in the first	2 3 4 5	know that they they actually published two articles bearing on the very same topic subsequently.  A Yes, exactly.  Q Okay. And I'm going to identify them
2 3 4 5 6	Association of North America?  A I don't that doesn't sound familiar.  Q Okay. So it talks to Mark Ellis at IMA  North America and to yourself.  And I'm interested in the first  paragraph. The first paragraph says: "As you may	2 3 4 5 6	know that they they actually published two articles bearing on the very same topic subsequently.  A Yes, exactly.  Q Okay. And I'm going to identify them again to put on our timeline.
2 3 4 5 6 7	Association of North America?  A I don't that doesn't sound familiar.  Q Okay. So it talks to Mark Ellis at IMA  North America and to yourself.  And I'm interested in the first	2 3 4 5 6 7	know that they they actually published two articles bearing on the very same topic subsequently.  A Yes, exactly.  Q Okay. And I'm going to identify them
2 3 4 5 6 7 8	Association of North America?  A I don't that doesn't sound familiar.  Q Okay. So it talks to Mark Ellis at IMA  North America and to yourself. 26 (Pages 476 to 479)

	Page 480		Page 482
1	Q Okay. And then we have Exhibit No. 52	1	THE WITNESS: And I guess I would again
2	is a critical review article that they wrote.	2	say that independent in the sense that these are
3	And you're familiar with that article,	3	their conclusions, but and submitted on behalf
4	right?	4	of us, which was clear.
5	A Yes.	5	BY MR. TISI:
6	Q And when I say you reviewed, you you	6	Q Right.
7	were familiar with it, you were familiar with it	7	A On behalf of industry.
8	at the time, right?	8	Q But they had been long-time consultants
9	A At the time of its	9	for the industry. Correct?
10	Q Publication.	10	A They had been consulting before then,
11	A I assume	11	yes.
12	Q Or shortly thereafter.	12	Q Okay. For at least 15 on talc for at
13	A Yeah, I assume so, yes.	13	least 15, 18 years, correct?
14	Q So 2008, this is the critical review,	14	MR. LOCKE: Objection.
15	tale and ovarian cancer. And this is 2008. And	15	THE WITNESS: Where did you come up with
16	this is Exhibit 52. And that's Huncharek and	16	that? 2000
17	Muscat.	17	BY MR. TISI:
18	Okay. And so far we have Dr. Muscat	18	Q 2000 to 2008 I'm sorry. 2000
19	appearing in 2000. Correct?	19	A 2009.
20	A Yes.	20	Q Okay. Let's say nine years, you're
21	Q We have him working on papers in 2005	21	right. You're right.
22	for the lawyers representing Imerys, correct?	22	All right. So now let's move forward.
23	A Yes.	23	We talked about IARC.
24	Q Which you were aware of.	24	So now, I want to again fill out the
25	2007, they write a publication. And	25	timeline so the jury understands what's going on.
		l .	
	Page 481		Page 483
1	Page 481 then in 2008, they write a publication. And	1	Page 483 2008, Dr. Epstein for the Cancer
1 2		1 2	
	then in 2008, they write a publication. And		2008, Dr. Epstein for the Cancer
2	then in 2008, they write a publication. And 2009 '8 and '9, they're filing the petition	2	2008, Dr. Epstein for the Cancer Prevention Coalition files asks that warnings
2	then in 2008, they write a publication. And 2009 '8 and '9, they're filing the petition they're drafting the response to the petition as	2 3	2008, Dr. Epstein for the Cancer Prevention Coalition files asks that warnings be mandated, correct?
2 3 4	then in 2008, they write a publication. And 2009 '8 and '9, they're filing the petition they're drafting the response to the petition as a, quote, independent review.  3
       and pulled a copy -- Exhibit 53, I pulled a copy
                                                                   scope.
 4
       of it, and as I read it, the only comment that was
                                                             4
                                                                   BY MR. TISI:
 5
                                                             5
       actually provided was by the PCPC.
                                                                      Q That's true, correct?
 6
              Does that refresh your recollection?
                                                             6
                                                                      A Yes.
 7
           A As I say, I can't remember, but I have
                                                             7
                                                                         MR. LOCKE: Objection.
 8
                                                             8
       no reason not to think that's true.
                                                                   BY MR. TISI:
 9
           Q Okay. And just to kind of fill out a
                                                             9
                                                                      Q And just for clarity of the record, the
                                                                   denial letter from the FDA dated April 2014 -- I'm
10
       timeline because I want to make it clear that I
                                                            10
11
       don't want to hide anything from the jury here, in
                                                            11
                                                                   sorry, it's dated 2014.
12
       2015, the petition was denied.
                                                            12
                                                                      A Yeah, it's '14. I wasn't sure about
13
           A That's correct.
                                                            13
                                                                   that.
                                                           14
14
           Q So write "2005, FDA," and --
                                                                      Q I stated 2015. You know, you're
15
              MR. TISI: Do you have a copy of the
                                                            15
                                                                   correct. You're correct. It's Exhibit No. 54.
16
       denial? I'll attach that in a moment.
                                                            16
                                                                         (Exhibit No. 54 was marked for
17
       BY MR. TISI:

                                                                   the -- the opposition to this Citizen's Petition,
           Q Is that -- is that correct?
 2
              MR. LOCKE: Objection.
                                                             2
                                                                   we'll just -- can I just call it "the opposition,"
 3
              THE WITNESS: As far as I know, yes. As
                                                             3
                                                                   and we know we're talking about something
 4
       I say --
                                                             4
                                                                   containing the opposition to the Citizen's
 5
                                                             5
                                                                   Petition?
       BY MR. TISI:
 6
           Q All right. Is there anything -- do you
                                                             6
                                                                      A Yes.
 7
       know why it took the FDA five years or six years
                                                             7
                                                                      Q Prior to filing the PCPC's opposition in
 8
       to actually act on this petition?
                                                             8
                                                                   July, and we looked at this earlier, you and --
 9
           A I don't. I know that it typically takes
                                                             9
                                                                   when I say "you," I mean you personally -- you and
10
       them years to respond to petitions, but I couldn't
                                                            10
                                                                   your colleagues at the PCPC and the companies
11
       say anything specific about this one.
                                                            11
                                                                   represented by the lawyers on this table went and
12
           Q Well, petitions related to cosmetics, on
                                                            12
                                                                   met with the FDA about the Citizen's Petition,
13
       the scheme of things -- I mean you work with the
                                                            13
                                                                  correct?
14
       FDA, you know the FDA does a lot of different
                                                            14
                                                                         MR. LOCKE: When?
15
       things. It deals with pharmaceutical drugs, it
                                                            15
                                                                         THE WITNESS: One other company as well.
16
       deals with over-the-counter drugs, it deals with
                                                            16
                                                                   BY MR. TISI:
                                                                      Q Unilever.
17
       the blood supply, it deals with a lot of different
                                                            17
18
                                                                      A Unilever.
       things, correct?
                                                            18
19
           A Not the Office of Cosmetics and Colors,
                                                            19
                                                                      Q Okay. But certainly Johnson & Johnson
20
                                                            20
                                                                   is by far the biggest contributor to -- in terms
       but other parts of the FDA, sure.
21
                                                            21
           Q Right. But the -- but the FDA as a --
                                                                   of resources to the Talc Task Force, correct, in
22
       as a whole -- I mean would it be fair to say that
                                                            22
                                                                   terms of money?
                                                                         MS. FRAZIER: Objection.
23
       on a scale of things, cosmetics are not as heavily
                                                            23
24
                                                            24
                                                                         MR. LOCKE: Objection.
       regulated or looked at as is, for example,
25
       pharmaceutical drugs or over-the-counter drugs?
                                                            25
                                                                         THE WITNESS: I think what I've seen,
```

28 (Pages 484 to 487)

	Page 488	Page 490
1	they're the biggest contributor.	1 THE WITNESS: That sounds roughly right
2	BY MR. TISI:	2 from the numbers I've seen.
3	Q I mean by a factor of a lot, correct?	3 BY MR. TISI:
4	MS. FRAZIER: Object to form.	Q Okay. And so the PCPC and Johnson &
5	BY MR. TISI:	Johnson and Imerys and Unilever went to go meet
6	Q I mean, it's a big they're the	6 with the FDA about the Citizen's Petition,
7	they're the major funder of the Talc Task Force,	7 correct?
8	correct?	8 A Yeah, I'm not sure if it was set up
9	MS. FRAZIER: Object to form.	9 specifically about the Citizen's Petition, but I
10	THE WITNESS: But they're not the only	know that certainly got discussed. So yes.
11	funder.	11 Q Well, we'll talk we're going to talk
12	BY MR. TISI:	about have you reviewed those those memos
13		
14	Q And in the top two or three is Imerys as	before today?  A I think I I reviewed the memo. I'm
15	well, correct?  A That's correct.	
16		S
	Q Okay. So while there may be many other members of the that have an interest in	
17		Q Okay. Well, did you
18	talc, the two big gorillas in the room are J&J,	A I don't disagree with that.
19	the manufacturer of talcum powder products like	Q But did you try to investigate that?
20	Johnson & Johnson's baby powder and Shower to	Because that's an important point. How did that
21	Shower, and the mining company who provides that	meeting get set up?
22	talc for use in the product, correct?	A I know Dr. Bailey set it up.
23	MR. LOCKE: Objection.	Q Dr. Bailey, the guy who used to work at
24	MS. FRAZIER: Objection to form.	the division
25	THE WITNESS: I mean we have	25 A Correct.

1	identification.)	1	predominant number of people at this at this
2	BY MR. TISI:	2	meeting were from the office that Dr. Bailey ran,
3	Q And just I can correct the error so we	3	the Office of Cosmetics and Colors, I was correct?
4	can correct it going forward. It's from John	4	A I would say you were correct, yes.
5	Bailey from Personal Care Council dated Monday,	5	Q Thank you. I like being correct.
6	May 11th, 2009.	6	And you attended that meeting?
7	Do you see that?	7	A I did.
8	A I'm sorry. The oh, yes.	8	Q Okay. Have you seen the final now,
9	Q The e-mail.	9	this is a fairly lengthy, several single-spaced
10	A Right, the e-mail.	10	pages of notes about what happened at that
11	Q It's to, among other things, you?	11	meeting?
12	A Yes.	12	A Okay. Yes.
13	Q Okay. And it's a meeting notes from	13	Q Do you see that?
14	the meeting of the FDA on talc.	14	A Yes.
15	A Yes.	15	Q Okay. Have you seen the FDA version
16	Q Okay. And it says: "All: Below are my	16	of of that?
17	attached notes from the FDA meeting on Friday."	17	A I think I have in my preparation for
18	Correct?	18	this.
19	A Yes.	19	Q Well, it says: The action items from
20	Q Okay. And these were recounting a	20	the meeting. "The FDA has to prepare notes of the
21	note notes that happened that prior Friday,	21	meeting." It's at the very end, the last
22	correct?	22	paragraph.
23	A Yes.	23	A Mm-hmm.
24	Q And so the meeting with the FDA says	24	Q The FDA notes I'm going to show you are
25	May 8th, 2008. Do you see that?	25	Exhibit 56.

Q It was talked about, and it was summarized for the FDA? A Yes, that's what it says. Q So the FDA says, We're not going to talk	2 3 4 5 6 7 8 9 10 11 12 13	discussion of the science, right?  A I I think for this meeting we were well, I guess the notes speak for themselves.  Q Well okay. My question was, you've talked to me before you said before when I was asking you questions about this petition, you said, Well, we didn't think the science supported it. Correct?  A Support the need for a warning, yes. Q Right. But we all agreed that there was a a debate in the medical and scientific community about what the science meant, correct? A Yes.
2 3 4 5 6 7 8 9 10 11 12 13	MR. LOCKE: Objection to form. THE WITNESS: Well, that's what it says, yes.  BY MR. TISI: Q All right. And in fact, you brought with you Dr. Muscat and Dr. Huncharek's opposition, the opposition that had not yet been filed? A It was — right, it was talked about. Q It was talked about, and it was summarized for the FDA? A Yes, that's what it says. Q So the FDA says, We're not going to talk about it, but then talked about it.	2 3 4 5 6 7 8 9 10 11 12 13	discussion of the science, right?  A I I think for this meeting we were well, I guess the notes speak for themselves.  Q Well okay. My question was, you've talked to me before you said before when I was asking you questions about this petition, you said, Well, we didn't think the science supported it. Correct?  A Support the need for a warning, yes. Q Right. But we all agreed that there was a a debate in the medical and scientific community about what the science meant, correct? A Yes. Q And that had been going on for decades,
2 3 4 5 6 7 8 9 10 11 12 13 14 15	MR. LOCKE: Objection to form. THE WITNESS: Well, that's what it says, yes.  BY MR. TISI: Q All right. And in fact, you brought with you Dr. Muscat and Dr. Huncharek's opposition, the opposition that had not yet been filed? A It was — right, it was talked about. Q It was talked about, and it was summarized for the FDA? A Yes, that's what it says. Q So the FDA says, We're not going to talk about it, but then talked about it. MR. LOCKE: Objection.	2 3 4 5 6 7 8 9 10 11 12 13 14 15	discussion of the science, right?  A I I think for this meeting we were well, I guess the notes speak for themselves.  Q Well okay. My question was, you've talked to me before you said before when I was asking you questions about this petition, you said, Well, we didn't think the science supported it. Correct?  A Support the need for a warning, yes. Q Right. But we all agreed that there was a a debate in the medical and scientific community about what the science meant, correct? A Yes. Q And that had been going on for decades, correct?
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	MR. LOCKE: Objection to form. THE WITNESS: Well, that's what it says, yes.  BY MR. TISI: Q All right. And in fact, you brought with you Dr. Muscat and Dr. Huncharek's opposition, the opposition that had not yet been filed? A It was right, it was talked about. Q It was talked about, and it was summarized for the FDA? A Yes, that's what it says. Q So the FDA says, We're not going to talk about it, but then talked about it. MR. LOCKE: Objection. THE WITNESS: Well, it says that she	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	discussion of the science, right?  A I I think for this meeting we were well, I guess the notes speak for themselves.  Q Well okay. My question was, you've talked to me before you said before when I was asking you questions about this petition, you said, Well, we didn't think the science supported it. Correct?  A Support the need for a warning, yes. Q Right. But we all agreed that there was a a debate in the medical and scientific community about what the science meant, correct? A Yes. Q And that had been going on for decades, correct?  A Yes. Q Okay. And you had a definite point of view on the issue, correct?
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	MR. LOCKE: Objection to form. THE WITNESS: Well, that's what it says, yes. BY MR. TISI: Q All right. And in fact, you brought with you Dr. Muscat and Dr. Huncharek's opposition, the opposition that had not yet been filed? A It was right, it was talked about. Q It was talked about, and it was summarized for the FDA? A Yes, that's what it says. Q So the FDA says, We're not going to talk about it, but then talked about it. MR. LOCKE: Objection. THE WITNESS: Well, it says that she then Dr. Katz then clarified to say that you can talk about it, but we're not going to discuss its status.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	discussion of the science, right?  A I I think for this meeting we were well, I guess the notes speak for themselves.  Q Well okay. My question was, you've talked to me before you said before when I was asking you questions about this petition, you said, Well, we didn't think the science supported it. Correct?  A Support the need for a warning, yes. Q Right. But we all agreed that there was a a debate in the medical and scientific community about what the science meant, correct? A Yes. Q And that had been going on for decades, correct? A Yes. Q Okay. And you had a definite point of view on the issue, correct? A Yes.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	MR. LOCKE: Objection to form. THE WITNESS: Well, that's what it says, yes.  BY MR. TISI: Q All right. And in fact, you brought with you Dr. Muscat and Dr. Huncharek's opposition, the opposition that had not yet been filed? A It was right, it was talked about. Q It was talked about, and it was summarized for the FDA? A Yes, that's what it says. Q So the FDA says, We're not going to talk about it, but then talked about it. MR. LOCKE: Objection. THE WITNESS: Well, it says that she then Dr. Katz then clarified to say that you can talk about it, but we're not going to discuss its status. BY MR. TISI:	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	discussion of the science, right?  A I I think for this meeting we were well, I guess the notes speak for themselves.  Q Well okay. My question was, you've talked to me before you said before when I was asking you questions about this petition, you said, Well, we didn't think the science supported it. Correct?  A Support the need for a warning, yes. Q Right. But we all agreed that there was a a debate in the medical and scientific community about what the science meant, correct? A Yes. Q And that had been going on for decades, correct?  A Yes. Q Okay. And you had a definite point of view on the issue, correct? A Yes. Q On behalf of your members, right?
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	MR. LOCKE: Objection to form. THE WITNESS: Well, that's what it says, yes. BY MR. TISI: Q All right. And in fact, you brought with you Dr. Muscat and Dr. Huncharek's opposition, the opposition that had not yet been filed? A It was right, it was talked about. Q It was talked about, and it was summarized for the FDA? A Yes, that's what it says. Q So the FDA says, We're not going to talk about it, but then talked about it. MR. LOCKE: Objection. THE WITNESS: Well, it says that she then Dr. Katz then clarified to say that you can talk about it, but we're not going to discuss its status. BY MR. TISI: Q Okay. So my question to you is, was	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	discussion of the science, right?  A I I think for this meeting we were well, I guess the notes speak for themselves.  Q Well okay. My question was, you've talked to me before you said before when I was asking you questions about this petition, you said, Well, we didn't think the science supported it. Correct?  A Support the need for a warning, yes. Q Right. But we all agreed that there was a a debate in the medical and scientific community about what the science meant, correct? A Yes. Q And that had been going on for decades, correct? A Yes. Q Okay. And you had a definite point of view on the issue, correct? A Yes. Q On behalf of your members, right? A Yes.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	MR. LOCKE: Objection to form. THE WITNESS: Well, that's what it says, yes. BY MR. TISI: Q All right. And in fact, you brought with you Dr. Muscat and Dr. Huncharek's opposition, the opposition that had not yet been filed? A It was right, it was talked about. Q It was talked about, and it was summarized for the FDA? A Yes, that's what it says. Q So the FDA says, We're not going to talk about it, but then talked about it. MR. LOCKE: Objection. THE WITNESS: Well, it says that she then Dr. Katz then clarified to say that you can talk about it, but we're not going to discuss its status. BY MR. TISI: Q Okay. So my question to you is, was anybody from the	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	discussion of the science, right?  A I I think for this meeting we were well, I guess the notes speak for themselves.  Q Well okay. My question was, you've talked to me before you said before when I was asking you questions about this petition, you said, Well, we didn't think the science supported it. Correct?  A Support the need for a warning, yes. Q Right. But we all agreed that there was a a debate in the medical and scientific community about what the science meant, correct? A Yes. Q And that had been going on for decades, correct? A Yes. Q Okay. And you had a definite point of view on the issue, correct? A Yes. Q On behalf of your members, right? A Yes. Q And somebody who had a different point
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	MR. LOCKE: Objection to form. THE WITNESS: Well, that's what it says, yes. BY MR. TISI: Q All right. And in fact, you brought with you Dr. Muscat and Dr. Huncharek's opposition, the opposition that had not yet been filed? A It was right, it was talked about. Q It was talked about, and it was summarized for the FDA? A Yes, that's what it says. Q So the FDA says, We're not going to talk about it, but then talked about it. MR. LOCKE: Objection. THE WITNESS: Well, it says that she then Dr. Katz then clarified to say that you can talk about it, but we're not going to discuss its status. BY MR. TISI: Q Okay. So my question to you is, was anybody from the Now, this meeting was set up by the	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	discussion of the science, right?  A I I think for this meeting we were well, I guess the notes speak for themselves.  Q Well okay. My question was, you've talked to me before you said before when I was asking you questions about this petition, you said, Well, we didn't think the science supported it. Correct?  A Support the need for a warning, yes. Q Right. But we all agreed that there was a a debate in the medical and scientific community about what the science meant, correct? A Yes. Q And that had been going on for decades, correct? A Yes. Q Okay. And you had a definite point of view on the issue, correct? A Yes. Q On behalf of your members, right? A Yes. Q And somebody who had a different point of view presented a petition to the FDA. Correct?
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24	MR. LOCKE: Objection to form. THE WITNESS: Well, that's what it says, yes.  BY MR. TISI:  Q All right. And in fact, you brought with you Dr. Muscat and Dr. Huncharek's opposition, the opposition that had not yet been filed?  A It was right, it was talked about. Q It was talked about, and it was summarized for the FDA?  A Yes, that's what it says. Q So the FDA says, We're not going to talk about it, but then talked about it.  MR. LOCKE: Objection.  THE WITNESS: Well, it says that she then Dr. Katz then clarified to say that you can talk about it, but we're not going to discuss its status.  BY MR. TISI: Q Okay. So my question to you is, was anybody from the Now, this meeting was set up by the by Dr. Bailey at the PCPC, correct?	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24	discussion of the science, right? 1	to a call that was made, conversations that had	1	requesting to have a warning label placed on
2	been had?	2	products containing" there is no word, but I
3	A From related to the petition?	3	think it's
4	Q Mm-hmm.	4	A Right.
5	A Sometime between when it was filed	5	Q involving talc.
6	and	6	A Right.
7	Q Mm-hmm.	7	Q "Here is an update on that activity.
8	A You can refresh my memory, but	8	Kathy Wille of J&J informed me that at a recent
9	nothing I'm not thinking of anything, no.	9	science meeting in Washington, D.C., she had a
10	(Exhibit No. 57 was marked for	10	side conversation with a key figure from the FDA
11	identification.)	11	cosmetic group responsible for responding to the
12	BY MR. TISI:	12	Citizen's Petition. He indicated that the FDA
13	Q Let me show you Exhibit No. 57.	13	would rule against the petition and would
14	This is not a PCPC document. I'm seeing	14	require would not require warning labels on
15	whether this refreshes your recollection.	15	cosmetic products, but the FDA is looking for
16	Now, at the very bottom, and I I'm	16	scientific support from industry that would help
17	going to ask you to read it, but I'm just going to	17	justify their position. She suggested that there
18	kind of set the table for you.	18	be a collective group working to have comments
19	A Very bottom of the second page?	19	submitted to the FDA. Principal among these
20	Q So first page.	20	efforts will be comments that Dr. Muscat and
21	A Okay.	21	Huncharek are co-developing.
22	Q There's an e-mail from Craig Bernard to	22	"In order to orchestrate the completion
23	Mark Zamek at J&J I mean at Rio Tinto. And Rio	23	of these comments, I have been asked by J&J to
24	Tinto is is Imerys as well, correct?	24	meet with them, along with Muscat and Huncharek,
25	A I believe so, yes.	25	at their headquarters in New Jersey on Wednesday,
	Page 513		Page 515
1	Q And it's referring to a meeting with	1	November 19th, in order to review the comments
2	J&J. Do you see that?	2	before being provided to Personal Care Products
3	A Yes.	3	Council."
4	Q Okay. If you would read it to yourself,	4	Do you see that?
5	please, and then we can	5	A Yes.
6	A Mm-hmm.	6	Q Okay. I read that correctly, right?
7	Q we can go off the record if you want.	7	A I believe so, yes.
8	It doesn't matter to me, but you can read it to	8	Q All right. This would suggest that
9	yourself.	9	there was another informal contact with the office
10	MR. TISI: We can go off the record.	10	of colors, fragrance and I'm sorry. I'm
11	MR. LOCKE: No. Let's stay on the	11	blanking. Office of
12	record.	12	A Cosmetic and Colors.
13	MR. TISI: Okay.	13	Q Cosmetics and Colors.
14	THE WITNESS: (Peruses document.)	14	Are you aware of it? Does this refresh
15	BY MR. TISI:	15	your recollection?
16	Q I'm really going to ask you about that	16	MR. LOCKE: Objection.
17	first big paragraph.	17	BY MR. TISI:
18	A Okay.	18	Q Does this refresh your recollection?
	Q Okay. First of all, the subject matter	19	A No.
19		20	Q If there was a side conversation about a
20	is "Meeting with J&J," correct?		
20 21	A Yes.	21	Citizen's Petition, in your experience being a
20 21 22	A Yes. Q Okay. And the first sentence says:	22	liaison with the FDA, would that be inappropriate?
20 21 22 23	A Yes. Q Okay. And the first sentence says: "You'll recall a couple of months ago we met with	22 23	liaison with the FDA, would that be inappropriate?  MR. LOCKE: Objection.
20 21 22	A Yes. Q Okay. And the first sentence says:	22	liaison with the FDA, would that be inappropriate?

Had you ever seen that before? A I no. Q Okay. Did you speak to I mean the two people that were involved in the process, as best as I can tell, from PCPC were you and Dr. Bailey. Right? A That's probably correct, yes. Q Did you speak to Dr. Bailey? A No. Q So you don't know what what

36 (Pages 516 to 519)

Page 520 Page 522 1 1 THE WITNESS: I can tell you what I Q So let me show you an e-mail dated --2 think my recollection is, that this was not a 2 58, this is May 2008, right after the Citizen's 3 3 longstanding thing. This was a -- J&J had -- had Petition was filed. It's an internal -- this 4 worked on having a -- Drs. Muscat and Huncharek 4 would have been a whole year before the meeting at 5 5 prepare a review, a current review of the the -- at the FDA. 6 literature, and thought that that would be 6 And from Kathleen Wille, and it's an 7 appropriate to submit. And I suspect that all 7 internal document. I don't expect that you would 8 8 have seen it in realtime. But it's talking about happened fairly soon before we actually submitted 9 9 the Citizen's Petition and the next steps. 10 10 BY MR. TISI: Do you see it? 11 Q Now, prior to this you had fairly 11 A I'm just reading through now. 12 consistent -- on this issue, you were -- as best I 12 (Peruses document.) Okay. 13 can tell from looking at the overall records that 13 Q Okay. And so just as you read this, 14 were produced in this case, and you can correct me 14 what's happening is the Citizen's Petition is 15 if I'm wrong, as I look at the decade or so prior 15 filed by Dr. Epstein, and there's kind of a 16 to this, you were the primary contact on this 16 mobilization of effort in -- in how to respond to 17 17 issue. that, and it's entitled "Next Steps." Do you see 18 A I would say myself and Dr. McEwen. 18 that? 19 Q Okay. Dr. Bailey really wasn't hands on 19 A I'm not sure where -with this issue over the -- as compared to you, 20 20 Q Second page. 21 21 22 22 Q Okay. And underneath that, one of the A Well, I guess I think our -- you know, our biggest involvement, PCPC's biggest 23 things they -- two things -- there are three 23 24 involvement, biggest effort related to NTP, and 24 things they identify. Secure funding and engage 25 Dr. Bailey wasn't there at the time. 25 experts, and that would be Huncharek and Muscat Page 521 Page 523 1 Q Okay. And the Citizen's Petition as 1 that's named here, and PCPC ultimately paid for 2 well. 2 that, right? 3 A Right, but it -- it wasn't -- we weren't 3 A Yes. doing multiple submissions and presenting at Q Okay. Number 2, "Engage internal 4 4 5 stakeholders." Do you know whether or not any meetings, and that sort of stuff. So it was --5 6 Q Right. But in terms of -- and, you 6 public relations people were -- were contacted in 7 know, we looked at examples here, but, you know, 7 connection with the Citizen's Petition? 8 you were kept up to date on the IARC issues, you 8 A I'm not aware --9 had been communicating with Bob Glenn at -- at --9 MR. LOCKE: Objection. You're referring 10 I mean I've seen a bunch of them, I could pull 10 to J&J -- you're asking the witness about J&J? 11 MR. TISI: No, I did not. them out for you. 11 12 But to the extent that the -- the other 12 BY MR. TISI: 13 defendants in this case, J&J and Imerys, were 13 Q I asked, are you aware of any public 14 contacting PCPC about issues related to talc, you 14 relations people for anybody that was contacted in 15 were prime -- the primary person that would be 15 connection with this Citizen's Petition? 16 their liaison. 16 A I guess I could only answer for PCPC, 17 A Probably. That's probably true. 17 and I'm not aware of any. 18 Q Okay. Until the Citizen's Petition 18 Q Okay. But the third is what I'm most was -- was filed, do you know that they interested in, "Determine level of external 19 19 20 contacted -- they wanted to contact Dr. Bailey? 20 support." 21 21 MR. LOCKE: Objection. The first is John Bailey. It says: 22 THE WITNESS: No, I didn't. 22 "John Bailey of the Personal Care Products Council 23 (Exhibit No. 58 was marked for 23 is out of the office until the next week, 24 24 June 2nd. We will ascertain their plans to identification.) 25 BY MR. TISI: 25 respond."

37 (Pages 520 to 523)

	Page 524		Page 526
1	Do you see that?	1	Counsel.
2	A Yes.	2	MR. LOCKE: Okay, good.
3	Q Okay. It didn't say, We're contacting	3	BY MR. TISI:
4	Linda Loretz, are they?	4	Q Tell me everything that you know
5	A That might be because it's Kathy Wille.	5	happened with respect to the development of the
6	I mean it just kind of depends who within	6	response to the Citizen's Petition.
7	Johnson & Johnson is is responding.	7	I know you said it was initiated by J&J.
8	Q So do you know whether or not in this	8	Do you know that Imerys had some input we saw a
9	time frame this is a full year before the	9	meeting that with Drs. Huncharek and Muscat
10	meeting, more than with the FDA and more than a	10	and and Imerys in November. Were you at that
11	year before the formal response was filed in July	11	meeting?
12	of 2009.	12	A No.
13	Do you know whether or not at this time	13	Q You know did you know it happened?
14	frame, J&J had been able to contact Dr. Bailey,	14	A I don't believe so. If I I don't
15	who again had been the prior director of the	15	recall it, no.
16	division?	16	Q Were you given an opportunity to review
17	A Yeah, I don't know what discussions went	17	the the Citizen's Petition that was actually
18	on with	18	filed on on PCPC's behalf?
19	Q I don't mean to be factitious about it,	19	A I I'm sure I was in the sense that
20	but wouldn't it make sense to actually if you	20	obviously if it was something we have had an issue
21	are here to testify on that issue, to actually	21	with, we wouldn't have submitted it. So I'm going
22	speak to Dr. Bailey	22	to say yes.
23	MR. LOCKE: Objection.	23	Q And so when you say it was it was
24	BY MR. TISI:	24	drafted by somebody else, it went out under PCPC's
25	Q about that issue?	25	name, and to the extent that you're here as a

Page 528 Page 530 1 MS. FRAZIER: Object to form. 1 that says "Meta-Analysis Research Group" across 2 THE WITNESS: No. 2 the top, right? 3 3 A Yes. BY MR. TISI: 4 Q And when a -- when a company -- I mean, 4 Q Okay. Did you do any due diligence as 5 5 to -- as to who Meta-Analysis Research Group was? when a company commissions a report like this, 6 doesn't the company usually reserve the right to 6 MR. LOCKE: Objection. Asked and 7 review it and make comments and edits before it's 7 answered. 8 8 THE WITNESS: We put faith in the submitted? 9 MR. LOCKE: Objection. Beyond the 9 epidemiologists as knowledgeable epidemiologists. 10 10 BY MR. TISI: scope. 11 BY MR. TISI: 11 Q Okay. Without doing your due diligence. 12 MR. LOCKE: Objection. 12 Q Typically? A I mean that --13 13 BY MR. TISI: 14 MR. LOCKE: Objection. 14 Q You did not investigate Dr. Huncharek 15 THE WITNESS: -- that brings up like us 15 and Muscat and what their relationship was, where 16 doing that, PCPC, you know, talc, other topics, 16 their funding came from, and how much time they 17 17 whatever, and yes, but I think when you're hiring spent on these issues, did you? MR. LOCKE: Objection. Mischaracterizes 18 reputable people, they're not going to let you 18 19 change their conclusions. I mean, you might have 19 testimony, asked and answered. 20 THE WITNESS: We accepted them because 20 edits, typos, clarity needed. I mean... 21 BY MR. TISI: 21 of their epidemiology expertise. 22 22 Q Right. Focus. BY MR. TISI: Q Did you have an opportunity to review 23 23 A Yeah. 24 Q Right. But -- but -- I mean that 24 this before it went in? 25 presumes that these are reputable people in part, 25 A As I say, I'm sure I did. Page 529 Page 531 1 1 Q Okay. Have you had any -- do you have don't you think? 2 MR. LOCKE: Objection. 2 any dispute that this is PCPC's response, that 3 THE WITNESS: It does. 3 PCPC agrees with the content? 4 BY MR. TISI: 4 MR. LOCKE: Objection. Asked and 5 5 Q Did you -- did you do -- I mean that's answered. The witness testified it was submitted 6 why I brought the brochure out there. You didn't б by the two epidemiologists. 7 do any due diligence as to who these people were 7 MR. TISI: I -- I'm not going to ask you 8 8 to characterize it. Your not under oath, Counsel. and what their stake was in this issue, did you? 9 MR. LOCKE: Objection. Mischaracterizes 9 I appreciate you schooling me, but honestly. 10 10 testimony. BY MR. TISI: 11 THE WITNESS: Yeah. 11 Q Is this PCPC's document? 12 MR. TISI: Whose testimony? 12 MR. LOCKE: We're just going to stick MR. LOCKE: Hers. 13 13 with the prior answer then. 14 BY MR. TISI: 14 BY MR. TISI: 15 Q Did you do any due diligence into who 15 Q Is this PCPC's document? Meta-Analysis Research Group is and to where they 16 16 MR. LOCKE: Objection. Asked and got their major funding? 17 17 answered. Let's move on. 18 MR. LOCKE: Objection. Asked and MR. TISI: No, we're not moving on. I 18 answered. We've covered this. want an answer to that question. 19 19 20 MR. LOCKE: You've answered -- she's BY MR. TISI: 20 21 Q Did you do it? 21 answered it three times. 22 A We had worked with Dr. Muscat before. 22 BY MR. TISI: 23 Q I -- I didn't ask you that question. 23 Q Do you -- do you -- is this PCPC's -- I 24 This was written on behalf of Meta-Analysis 24 mean, for example, we read a sentence at the very 25 Research Group, correct? It's got the big logo 25 beginning in the Introduction section that says,

39 (Pages 528 to 531)

Page 532 Page 534 Q Not a hundred percent consistent, but 1 We --1 2 MR. LOCKE: You're talking about the 2 is --3 3 instruction that was written by the two A But, yes. 4 4 Q - is a hundred percent consistency scientists? 5 MR. TISI: The -- I don't know if that's 5 required? 6 6 written by the two scientists. That's my A No. 7 7 Q Okay. So there was consistency across question. 8 MR. LOCKE: Well, it says "prepared" --8 studies. MR. TISI: Honestly, Counsel. 9 9 Now, arguing against causal association, Dr. Bailey, on behalf of the PCPC, which you are 10 MR. LOCKE: No, honestly. 10 11 MR. TISI: Honestly, I'm asking the 11 here for -question. Okay. There's been a lot of 12 12 A Yes. 13 ghostwriting in this case. 13 Q -- says: "There is a lack of a clear MR. LOCKE: Objection. dose-response relationship." Correct? 14 14 A Yes. 15 BY MR. TISI: 15 16 Q "Given the multiple implications of such Q And even posits that some epidemiologic 16 studies suggest an inverse association. Correct? 17 warnings, the Personal Care Products Council 17 18 sought an evaluation of the validity of the 18 A Correct. 19 scientific facts underlying this request." Right? Q Now, as a toxicologist, if you see an 19 Do you know whether or not this 20 20 inverse association with the disease, doesn't it 21 document, Exhibit No. 20 -- 43, is the report 21 raise the suggestion that this is a protective -submitted by PCPC and it is PCPC's position, 22 22 may have a protective effect? correct? MR. LOCKE: Objection. Beyond the 2.3 23 24 MR. LOCKE: Objection. Compound 24 scope, calls for expert testimony. 25 25 BY MR. TISI: question. Page 533 Page 535 1 THE WITNESS: I believe this is the 1 Q I mean there might be reasons why 2 document we submitted. 2 that -- why that is seen, correct? 3 BY MR. TISI: 3 MR. LOCKE: Same objection. Q Okay. All right. Let's talk about it THE WITNESS: In theory, that's possible 4 4 5 5 for a moment. if there's consistency. 6 The summary provided by Dr. Bailey in б BY MR. TISI: the cover letter says: "The review concludes that 7 7 Q I mean if this was a protective of the weak epidemiologic association is unlikely to 8 ovarian cancer, you may have found a miracle, 8 9 be causal." 9 right? 10 Do you see that? 10 A Well, I would go into the causality. It would work the same way for protective effect. 11 A Yes. 11 12 MR. LOCKE: What page are you at? 12 Q You didn't believe that there was an MR. TISI: Page 2, Dr. Bailey's letter. inverse -- there was an inverse relationship 13 13 14 MR. LOCKE: Okay. between ovarian cancer and talc, did you? 14 A That's not what it says. Some 15 BY MR. TISI: 15 16 Q Putting aside the characterization of 16 studies --"weak," which we can talk about in a moment, do Q Suggest that. 17 17 you believe that there was an epidemiologic A -- showed that. 18 18 association seen across studies? Q And if that were really something that 19 19 was seen in some studies, as a toxicologist and as 20 A It's not --20 21 somebody who represents the talc industry, that 21 MR. LOCKE: Objection. Beyond the 22 would be something that would be really an 22 interest to you, wouldn't it? 23 THE WITNESS: Not a hundred percent 23 24 A I don't read it that way at all. The 24 consistent, no. BY MR. TISI: 25 25 point of saying that some studies showed an

40 (Pages 532 to 535)

Page 536 Page 538 1 1 inverse relationship cast doubt on the causality. Q -- that are different than the 2 Q Okay. Well, there are biases that might 2 explanation that Drs. Muscat and Huncharek said on 3 suggest that -- why that would occur particularly 3 the -- on behalf of the industry. 4 with a disease like cancer. Are you familiar with 4 A I think our --5 5 survival bias? Have you ever heard of that? MR. LOCKE: Objection. 6 MR. LOCKE: Objection. Beyond the 6 THE WITNESS: I think our comments were 7 7 posted, though, so somebody could see that they scope. 8 THE WITNESS: I'm not sure what that 8 were --9 phrase means. 9 BY MR. TISI: 10 BY MR. TISI: 10 Q Do you know whether or not Dr. Epstein 11 Q Okay. Did you ever -- on behalf of the 11 or anybody else was contacted and say, These PCPC, did you ever ask whether or not there would are -- these are the contacts. Do you want to 12 12 13 be explanations consistent with causation by which 13 respond? Do you know whether they even checked 14 you might see an inverse dose-response 14 the website? 15 relationship? 15 A Well, I don't, but they had the right to 16 A I think -- I mean, as far as the 16 check -- I mean --17 scientist- -- the scientific analysis we left to 17 Q Right. 18 18 A -- the same way as a Citizen Petition the epidemiologists. 19 Q Well, I mean, pardon me for being -- for 19 would be posted, the comments received would be 20 being direct about this. 20 posted. 21 Before this was actually filed, you and 21 Q But not everybody has a former director 22 of the division that considers this work for them all of these -- these companies marched into the 22 23 23 FDA on the Citizen's Petition issue on May -- in like you did, correct? 24 May of 2009 to talk about the epidemiology in 24 MR. LOCKE: Objection. 25 part. Correct? 25 BY MR. TISI: Page 537 Page 539 1 A I think the talk on that was fairly 1 Q Do you know whether or not Epstein had 2 limited. I mean, the parts I remember from that 2 any connection with the FDA? 3 meeting had more to do with talking about sourcing 3 I mean, you have to admit having 4 and that sort of thing. I -- and again, as -- as 4 Dr. Bailey is a pretty -- is a pretty important 5 the meeting minutes say, FDA wasn't engaging us in 5 connection to the FDA, don't you think? 6 discussion. They were going to let us say our 6 MR. LOCKE: Stop. Which question do you 7 7 piece -want her to answer? 8 8 Q Right. MR. TISI: That one. 9 A -- and then said, Please submit that so 9 BY MR. TISI: 10 that we can actually read and consider it. 10 Q That's a pretty important connection to 11 Q And there was no opportunity for 11 the FDA, having somebody who worked for the 12 doctor -- Dr. Epstein or anybody else to come in 12 division, correct? and say, You know, okay, we saw that in the -- in 13 13 MR. LOCKE: Objection. 14 the medical literature. This is a possible 14 THE WITNESS: I mean, I think as I said 15 explanation as to why that is. 15 before, he was -- he was hired for his 16 MR. LOCKE: Objection. 16 understanding of the FDA, for his experience. 17 BY MR. TISI: 17 BY MR. TISI: 18 Q There was no other opportunity in the 18 Q Not his contacts? 19 four years that this was pending for -- for A For knowing the people, that's -- that's 19 20 anybody to come in and say -- and say, You know 20 okay. That doesn't mean they're going to --21 what, we -- we noted that there's an inverse 21 Q Right. 22 relationship, but these are possible explanations 22 A -- do things differently because they 23 23 know the guy. 24 24 Q Do you know -- do you know whether or MR. LOCKE: Objection. 25 BY MR. TISI: 25 not Dr. Epstein's group had any similar

2 3 4 5 6 7 8 9	Q Okay. And and that's an important issue, don't you think?  A Sure. Q And one of the things that has made the points that is made by Dr. Bailey on behalf of the PCPC and Dr. Muscat and Huncharek is that there was no biologically plausible mechanism because talc is not known to be a carcinogen, pure talc.  A Okay. Q Is that true? I mean, I could point it	2 3 4 5 6 7 8 9	between talc and fibrous asbestos, the latter being a known and well-described carcinogen." First of all, that's true, right? A I'm sorry. I'm MR. LOCKE: What's your question? BY MR. TISI: Q I said I said asbestos "fibrous asbestos is a known and well-described carcinogen." A Where does it say that?
2 3 4 5 6 7 8 9 10	Q Okay. And and that's an important issue, don't you think?  A Sure. Q And one of the things that has made the points that is made by Dr. Bailey on behalf of the PCPC and Dr. Muscat and Huncharek is that there was no biologically plausible mechanism because talc is not known to be a carcinogen, pure talc.  A Okay. Q Is that true? I mean, I could point it out. Let's go to the page let's go. Go to	2 3 4 5 6 7 8 9 10	between talc and fibrous asbestos, the latter being a known and well-described carcinogen." First of all, that's true, right? A I'm sorry. I'm MR. LOCKE: What's your question? BY MR. TISI: Q I said I said asbestos "fibrous asbestos is a known and well-described carcinogen." A Where does it say that? Q First sentence, the last full paragraph
2 3 4 5 6 7 8 9 10 11	Q Okay. And and that's an important issue, don't you think?  A Sure.  Q And one of the things that has made the points that is made by Dr. Bailey on behalf of the PCPC and Dr. Muscat and Huncharek is that there was no biologically plausible mechanism because talc is not known to be a carcinogen, pure talc.  A Okay.  Q Is that true? I mean, I could point it out. Let's go to the page let's go. Go to page 25 of the of Dr. Huncharek's report	2 3 4 5 6 7 8 9 10 11	between talc and fibrous asbestos, the latter being a known and well-described carcinogen." First of all, that's true, right? A I'm sorry. I'm MR. LOCKE: What's your question? BY MR. TISI: Q I said I said asbestos "fibrous asbestos is a known and well-described carcinogen." A Where does it say that? Q First sentence, the last full paragraph starting "Initially."
2 3 4 5 6 7 8 9 10 11 12 13	Q Okay. And and that's an important issue, don't you think?  A Sure. Q And one of the things that has made the points that is made by Dr. Bailey on behalf of the PCPC and Dr. Muscat and Huncharek is that there was no biologically plausible mechanism because talc is not known to be a carcinogen, pure talc.  A Okay. Q Is that true? I mean, I could point it out. Let's go to the page let's go. Go to page 25 of the of Dr. Huncharek's report Muscat and Huncharek's report.	2 3 4 5 6 7 8 9 10 11 12	between talc and fibrous asbestos, the latter being a known and well-described carcinogen." First of all, that's true, right? A I'm sorry. I'm MR. LOCKE: What's your question? BY MR. TISI: Q I said I said asbestos "fibrous asbestos is a known and well-described carcinogen." A Where does it say that? Q First sentence, the last full paragraph starting "Initially." A Okay. Oh, okay it. Got it. Sorry.
2 3 4 5 6 7 8 9 10 11 12 13 14	Q Okay. And and that's an important issue, don't you think?  A Sure.  Q And one of the things that has made the points that is made by Dr. Bailey on behalf of the PCPC and Dr. Muscat and Huncharek is that there was no biologically plausible mechanism because talc is not known to be a carcinogen, pure talc.  A Okay.  Q Is that true? I mean, I could point it out. Let's go to the page let's go. Go to page 25 of the of Dr. Huncharek's report Muscat and Huncharek's report.  A Okay.	2 3 4 5 6 7 8 9 10 11 12 13	between talc and fibrous asbestos, the latter being a known and well-described carcinogen." First of all, that's true, right? A I'm sorry. I'm MR. LOCKE: What's your question? BY MR. TISI: Q I said I said asbestos "fibrous asbestos is a known and well-described carcinogen." A Where does it say that? Q First sentence, the last full paragraph starting "Initially." A Okay. Oh, okay it. Got it. Sorry. Very first sentence.
2 3 4 5 6 7 8 9 10 11 12 13 14 15	Q Okay. And and that's an important issue, don't you think?  A Sure.  Q And one of the things that has made the points that is made by Dr. Bailey on behalf of the PCPC and Dr. Muscat and Huncharek is that there was no biologically plausible mechanism because talc is not known to be a carcinogen, pure talc.  A Okay.  Q Is that true? I mean, I could point it out. Let's go to the page let's go. Go to page 25 of the of Dr. Huncharek's report Muscat and Huncharek's report.  A Okay.  Q Could you read let's put up the last	2 3 4 5 6 7 8 9 10 11 12 13 14 15	between talc and fibrous asbestos, the latter being a known and well-described carcinogen." First of all, that's true, right? A I'm sorry. I'm MR. LOCKE: What's your question? BY MR. TISI: Q I said I said asbestos "fibrous asbestos is a known and well-described carcinogen." A Where does it say that? Q First sentence, the last full paragraph starting "Initially." A Okay. Oh, okay it. Got it. Sorry. Very first sentence. Q And you agree with that, right, because
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	Q Okay. And and that's an important issue, don't you think?  A Sure.  Q And one of the things that has made the points that is made by Dr. Bailey on behalf of the PCPC and Dr. Muscat and Huncharek is that there was no biologically plausible mechanism because talc is not known to be a carcinogen, pure talc.  A Okay.  Q Is that true? I mean, I could point it out. Let's go to the page let's go. Go to page 25 of the of Dr. Huncharek's report Muscat and Huncharek's report.  A Okay.  Q Could you read let's put up the last two paragraphs.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	between talc and fibrous asbestos, the latter being a known and well-described carcinogen." First of all, that's true, right? A I'm sorry. I'm MR. LOCKE: What's your question? BY MR. TISI: Q I said I said asbestos "fibrous asbestos is a known and well-described carcinogen." A Where does it say that? Q First sentence, the last full paragraph starting "Initially." A Okay. Oh, okay it. Got it. Sorry. Very first sentence. Q And you agree with that, right, because you sent that
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	Q Okay. And and that's an important issue, don't you think?  A Sure.  Q And one of the things that has made the points that is made by Dr. Bailey on behalf of the PCPC and Dr. Muscat and Huncharek is that there was no biologically plausible mechanism because talc is not known to be a carcinogen, pure talc.  A Okay.  Q Is that true? I mean, I could point it out. Let's go to the page let's go. Go to page 25 of the of Dr. Huncharek's report Muscat and Huncharek's report.  A Okay.  Q Could you read let's put up the last two paragraphs.  Are you there? It's page 25 of 28 of	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	between talc and fibrous asbestos, the latter being a known and well-described carcinogen." First of all, that's true, right? A I'm sorry. I'm MR. LOCKE: What's your question? BY MR. TISI: Q I said I said asbestos "fibrous asbestos is a known and well-described carcinogen." A Where does it say that? Q First sentence, the last full paragraph starting "Initially." A Okay. Oh, okay it. Got it. Sorry. Very first sentence. Q And you agree with that, right, because you sent that A Yes.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	Q Okay. And and that's an important issue, don't you think?  A Sure. Q And one of the things that has made the points that is made by Dr. Bailey on behalf of the PCPC and Dr. Muscat and Huncharek is that there was no biologically plausible mechanism because talc is not known to be a carcinogen, pure talc.  A Okay. Q Is that true? I mean, I could point it out. Let's go to the page let's go. Go to page 25 of the of Dr. Huncharek's report Muscat and Huncharek's report.  A Okay. Q Could you read let's put up the last two paragraphs.  Are you there? It's page 25 of 28 of 39.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	between talc and fibrous asbestos, the latter being a known and well-described carcinogen." First of all, that's true, right? A I'm sorry. I'm MR. LOCKE: What's your question? BY MR. TISI: Q I said I said asbestos "fibrous asbestos is a known and well-described carcinogen." A Where does it say that? Q First sentence, the last full paragraph starting "Initially." A Okay. Oh, okay it. Got it. Sorry. Very first sentence. Q And you agree with that, right, because you sent that A Yes. Q on behalf of the PCPC? Okay.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	Q Okay. And and that's an important issue, don't you think?  A Sure. Q And one of the things that has made the points that is made by Dr. Bailey on behalf of the PCPC and Dr. Muscat and Huncharek is that there was no biologically plausible mechanism because talc is not known to be a carcinogen, pure talc. Q And you agree with that, right, because you sent that A Yes. Q on behalf of the PCPC? Okay. And he makes the point at the end that: "Prior to the 1970s, some products may have contained some asbestos." Correct? A Correct.

42 (Pages 540 to 543)

Page 544 Page 546 1 Q Okay. And it says: "Clearly such 1 BY MR. TISI: 2 products could possibly represent a carcinogenic 2 Q Okay. No detectable asbestos or no 3 risk secondary to asbestos contamination." 3 asbestos? A I mean, there is a specification that's 4 4 Correct? 5 A That's what it says. 5 no detectable. 6 Q Okay. And so we can agree that asbestos б Q Different question. 7 contamination could in fact be a basis of talcum 7 My question is, are you representing to 8 8 powder products -- a biologically plausible the -- is this being represented to the FDA that 9 mechanism by which talcum powder products may 9 there is -- that asbestos was eliminated? 10 cause ovarian cancer. Correct? 10 A I mean, I think the FDA knows as much 11 MR. LOCKE: Objection. Beyond the 11 about what's going on with asbestos because they 12 12 were involved in the -- in the specification scope. 13 THE WITNESS: Yeah, I mean, I think what 13 that --14 14 this is actually saying is -- is that's not talc Q In the 1970s? 15 MR. LOCKE: Let her --15 per se. 16 BY MR. TISI: 16 THE WITNESS: And understand there was a 17 Q Right. But we're talking about --17 detection limit. 18 that's why I made the point in the very beginning 18 BY MR. TISI: 19 of saying that -- we're talking about what's in 19 Q Honestly, that -- that's not my 20 the bottle, right? 20 question. Okay? 21 A Right. 21 MR. LOCKE: Let her finish her answer, 22 Q And so if talcum powder products have 22 and then you can ask --23 23 asbestos in it, that would be a biologically BY MR. TISI: 24 plausible mechanism, and Drs. Huncharek and Muscat 24 Q My question -- my question is this --25 assumed that there was none. That was a predicate 25 this report assumes that asbestos had been Page 545 Page 547 1 eliminated from talcum powder products since 1970. 1 for their statement. 2 Because the next paragraph, it says: 2 True or not true? 3 "Since the early '70s, the relevant industries 3 MR. LOCKE: Objection. THE WITNESS: I -- I think it's like 4 voluntarily eliminated asbestos from contamination 4 5 from talc products." 5 anything else, at some detection limit. I mean 6 Do you see that? 6 every contaminant has a detection limit. So I 7 A Yes. 7 think that's implied. 8 8 Q Okay. So the assumption being that BY MR. TISI: Q Okay. And if asbestos -- let's assume 9 there was no asbestos that had been eliminated, 9 10 10 that you use the right test, right? I mean, you correct? 11 could use -- you could use a -- if you used the 11 A That's what it says. 12 Q Okay. What does the word "elimination" 12 wrong test and you don't -- it may go undetected, 13 mean to you? 13 14 MR. LOCKE: Objection. 14 A Well, as is true for any analysis. 15 THE WITNESS: Well, it was the '70s when 15 Q Correct. Okay. 16 the asbestos issue was raised, and there was a lot 16 So my quest- -- my question is when you make the -- the statement does not say -- because 17 of work by the industry to develop a specification 17 that -- that said that there would be no everybody had an opportunity to look at this 18 18 19 19 detectable asbestos. before it went in. 20 20 When this statement is made to the FDA. BY MR. TISI: 21 Q Right. And so the -- but my question 21 it says asbestos had been eliminated. True? is, what does the word "elimination" mean to you? 22 22 A Again, I think you can argue what 23 MR. LOCKE: Objection. 23 that -- what that word -- what is meant by that 24 THE WITNESS: I think in this context it 24 word here. 25 means no detectable asbestos. 25 Q Okay. Well, we can agree that if there

                                                                    grade of talc that was used in the talcum powder
 8
          Q And that's what the FDA was asking
                                                              8
                                                                    products to actual physical bottles that were
 9
       about, right?
                                                              9
                                                                    returned by consumers.
10
                                                            10
             MR. LOCKE: Objection.
                                                                          Did you know that?
11
       BY MR. TISI:
                                                            11
                                                                       A I guess no, not really.
12
                                                            12
          Q Because on the May 8th -- let me
                                                                       Q I mean, one of the things -- if the FDA
13
       rephrase the question.
                                                            13
                                                                    was asking you questions about whether or not what
14
                                                            14
                                                                    was in the bottle might contain things other than
             On the May 8th meeting with -- with you
15
       all, and you made the point several times, in
                                                            15
                                                                    pure talc, were you curious as the entity to say,
                                                            16
16
       addition to the epidemiology, the FDA wanted to
                                                                    Hey, guys, do you have any samples around we can
                                                            17
17
       know just how pure talcum powder products were.
                                                                    test?
18
          A They wanted to know -- they raised
                                                            18
                                                                       A I mean, I --
19
       questions about sourcing and testing and how do
                                                            19
                                                                          MR. LOCKE: Objection.
20
       you find the mines and -- and that type of stuff.
                                                            20
                                                                          THE WITNESS: -- think we had -- we had
21
          Q Because they wanted to know how -- well,
                                                            21
                                                                    worked with FDA and companies looking at that
22
       you knew the -- the reason why they were asking
                                                            22
                                                                    question, if we're talking about asbestos back in
23
       that question because they wanted to know what was
                                                            23
                                                                    the '70s.
24
       in the bottle.
                                                            24
                                                                    BY MR. TISI:
25
          A Yes. They were trying to understand --
                                                            25
                                                                       Q Right. And you also made the point that
                                             Page 549
                                                                                                          Page 551
 1
       right.
                                                              1
                                                                    some of those specifications were decades old,
 2
          Q Right. This was not pharmaceutical
                                                              2
                                                                    right? And one of the things that Dr. Bailey
 3
       grade talc. This was cosmetic talc, right?
                                                              3
                                                                    said, that they would be willing to look at -- at
 4
             MR. LOCKE: Objection.
                                                                    tightening up those specifications, right?
                                                              4
 5
                                                              5
                                                                          MR. LOCKE: Objection.
             THE WITNESS: I think it's basically the
 6
       same as pharmaceutical grade talc, but yes.
                                                              6
                                                                          THE WITNESS: I think he did. I mean,
                                                              7
 7
       BY MR. TISI:
                                                                    there was always an openness -- obviously, FDA was
 8
                                                              8
                                                                    welcome to do their own specification, but I don't
          Q But the point is there -- there are a
 9
       lot of things -- so -- so what the FDA really
                                                              9
                                                                    think methodologies had substantially changed.
10
       wanted to drill down to here is -- I know you guys
                                                            10
                                                                    BY MR. TISI:
11
                                                            11
                                                                       Q Well, do you know that?
       talked about, you know, talc as a molecule and
12
       whether or not it can cause ovarian cancer, and
                                                            12
                                                                       A Yes, actually, I think I could say I do.
                                                                   I think our specification is essentially the same
13
       you addressed that issue, but are there other
                                                            13
14
       things in the bottle that might explain this
                                                            14
                                                                    as what the USP uses essentially. And I know like
                                                                    ASTM was looking at it, but they haven't changed
15
       increased risk? They asked you that question,
                                                            15
16
       right?
                                                            16
                                                                    anything or promulgated a new specification.
             MR. LOCKE: Objection.
                                                                       Q So the question -- the question that I
17
                                                            17
18
             THE WITNESS: And they asked us for
                                                            18
                                                                    have here is, both the FDA and Dr. Bailey noted
19
       follow-up information, which -- which we provided.
                                                            19
                                                                    that the -- that the standards that were adopted
20
       BY MR. TISI:
                                                            20
                                                                    in the 1970s were then decades old, correct?
21
                                                            21
          Q Now, one of the things we learned in
                                                                          MR. LOCKE: Objection.
22
       this litigation is that these folks down here, the
                                                            22
                                                                          THE WITNESS: Noted where? At the
23
       J&J and Imerys, had talc samples available to them
                                                            23
                                                                    meeting?
24
       for decades.
                                                            24
                                                                    BY MR. TISI:
25
             MR. TISI: Objection.
                                                            25
                                                                       Q At the meeting. It says here -- if you
```

44 (Pages 548 to 551)

Page 552 Page 554 1 go back to the meeting notes, it says --1 A -- and is used by USP. 2 MR. LOCKE: Can you tell us which 2 Q Did you go back and see whether or not 3 3 exhibit you're referring to? there are other methods that would guarantee that 4 MR. TISI: Exhibit No. 55. 4 asbestos had been eliminated -- well, let me 5 5 BY MR. TISI: rephrase the question for you. 6 6 Is -- is it a -- would you agree with me Q It says -- if you go to page 2, it says: 7 "Dr. Bailey mentioned that the Council published 7 that the goal here is to eliminate asbestos from 8 specifications for talc as well as analytical 8 cosmetic talc? You don't want any asbestos in methodology for asbestos. These are the ones most 9 9 cosmetic talc. Would you agree with that? 10 often cited for the raw material. He mentioned 10 A That's the ideal. 11 these were developed almost 20 -- 20 years ago, 11 Q That's the ideal. and that they would need to be checked for 12 12 Particularly since this is a product 13 verifications." 13 that honestly there are other -- it's a cosmetic, 14 and there are other alternatives out there, right? Do you see that? 14 15 MR. LOCKE: Objection. A Yes. 15 16 Q Okay. And so one of the things that the 16 THE WITNESS: You don't need talc to 17 FDA and -- and the PCPC were talking about is, are 17 live, yes. 18 our specifications for testing tale, are they 18 BY MR. TISI: 19 outdated? Are they as stringent as they ought to 19 Q Right. And to the extent you do need it 20 be? Correct? 20 to live, there's corn starch, right? 21 MR. LOCKE: Object -- objection. 21 MR. LOCKE: Objection. 22 THE WITNESS: There's alternatives, yes. THE WITNESS: That's what he's talking 22 23 about here, yes, but he's certainly saying that we 23 BY MR. TISI: 24 welcome FDA's --24 Q Right. And so the question is, in light 25 BY MR. TISI: 25 of that, you don't want any asbestos, none, zero. Page 553 Page 555 1 O Of course. 1 You want it eliminated. True? A -- to weigh in, and --2 2 A You want it to be very low. My 3 Q Right. But the -- but the question is, 3 understanding is the methodologies that are used, 4 when these specifications were -- were developed 4 it's actually gotten lower in detection limits, 5 in the 1970s, the epidemiology studies hadn't come 5 and we are using what -- again, the equivalent of 6 out yet, right? They didn't come out until 1982. 6 a USP method. 7 You made it clear that it was the early 1980s. 7 Q Okay. All right. Now, let's talk about 8 8 A That's true, yes. other aspects of this report, if we could. 9 Q Okay. And so now you had a new 9 First of all, can you -- I asked you 10 potential risk that was really raised by the 10 whether or not -- on the asbestos issue, whether 11 epidemiology studies, and one of the questions 11 or not the company had ever gone back and -- the 12 that you had to answer is, are those a 12 companies that were the primary people here had 13 biologically plausible mechanism, right? 13 ever gone back and actually tested samples that it 14 MR. LOCKE: Objection. 14 had in its possession that went back decades, and 15 THE WITNESS: Yes. 15 you indicated you didn't even know they had them, 16 BY MR. TISI: 16 right? 17 17 Q Okay. And in light of that, did you A Right. 18 ever go back and say, Do we need to tighten up our 18 MR. LOCKE: Objection. 19 standards and to use a different measurement that 19 BY MR. TISI: 20 20 would make sure that we had, using your terms in Q Were you able to produce to the FDA any 21 21 here, "eliminated asbestos"? testing records, any -- any literature, any 22 A I guess I'm just aware that basically 22 outside audit, anything, that went back and looked 23 the methods -- methodology used is still what is 23 at talc being tested to demonstrate the 24 24 used today -truthfulness of what Drs. Huncharek and Muscat 25 Q Right. 25 assumed, that asbestos had been eliminated? Or

45 (Pages 552 to 555)

Page 556 Page 558 1 did you just make the statement? 1 cetera. I mean, the --2 A I mean there was a great deal of testing 2 BY MR. TISI: 3 that went on in the early '70s --3 Q Well, the FDA on the translocation issue 4 Q Right. 4 said that that's definitely biologically 5 5 A -- to show it was not detectable, and plausible. 6 that's what the specification says. 6 A They did say that. 7 Q Got you. From the 1970s. Now you're 7 Q Okay. So let's --8 meeting with them in -- in May of 2008. They're 8 A I'm not sure what their basis was asking you about asbestos. Right? So now we're 9 9 because they didn't reference, but they did say 10 the '70s, '80s, '90s, 2000s, it's almost 30 years. 10 that. Between the 1970s and the 2000s, did you 11 11 Q Well, but you didn't reference proof that there was -- okay. Let's -- so let's be fair 12 come forward, either on your behalf or did any of 12 13 these companies come forward and say, Look, we're 13 here. Okay. 14 going to show you proof that our talc from the 14 You say the FDA didn't -- didn't 15 1970s forward did not have asbestos in it, or was 15 reference the support for a translocation. Fine. 16 that statement just made? 16 What is your reference that in the 17 A I think it -- the basis of the statement 17 1980s, 1990s and 2000s, there was no contaminants 18 was, again, the work that had done -- been done in 18 in talc, talcum powder products, that were 19 the '70s to set up the specification. It was the potentially biologically plausible mechanisms that 19 20 discussions that followed with FDA to talk -- to 20 would explain what we all agree is a trend towards 21 answer the questions about sourcing and testing. 21 an increased risk seen in the epidemiology 22 22 studies? Q Agreed. 23 A I think if you're taking "elimination" 23 MR. LOCKE: Objection. 24 to mean a literal zero, I can't think of any 24 THE WITNESS: I mean there was no 25 contaminant that anybody can say is a literal 25 evidence for talc itself. As I say, perfume Page 557 Page 559 1 1 fragrance is not regarded -zero. 2 Q So do you know -- did you take into 2 BY MR. TISI: 3 account whether or not talcum -- talcum powder 3 Q You don't look at it. 4 products have fragrances, right? 4 A -- as a carcinogen. 5 5 Q You don't look at it. Did you? A Yes. 6 Q Did you look at the fragrances in there б A We --7 to see whether that provided a biologically 7 O Has there been a lot of discussion 8 plausible mechanism? 8 about -- let me --9 MR. LOCKE: When you say "look" -- "did 9 A Fragrance in general. I mean it's used 10 you look," are you referring -in body lotion, it's used in -- as fragrance. 10 11 MR. TISI: PCPC. It's used in --11 12 BY MR. TISI: 12 Q Right, but it doesn't -- it doesn't --13 Q Did PCPC, when it provided this report 13 A It's not considered carcinogenic. 14 to the -- to the FDA talking about Q -- it doesn't -- but is body lotion, 14 biologic plausibility, there's no way this 15 15 does that come in contact with your ovaries, happens, right? When you said that to the FDA, 16 16 typically? Are there any epidemiology -- are okay, did you consider whether or not what was in there any epidemiologies that's --17 17 18 the bottle contained other things that might A The components of fragrance are not 18 provide that mechanism? 19 19 regarded as --20 Q Did you look? MR. LOCKE: Objection. 20 21 THE WITNESS: I mean, I -- I think when 21 A Look at? 22 you're talking about fragrance, which we -- is 22 Q Every component that was in the bottle, did you look at each one of them and see whether 23 part of a lot of products, I mean, we do not think 23 24 of fragrances as being carcinogenic, not to or not there was things that could be in that 24 25 mention the whole thing about translocation, et 25 bottle that provided a biologically plausible --

46 (Pages 556 to 559)

Page 560 Page 562 1 or did you look solely at pure talc? 1 A If somebody wanted to address our 2 A I guess the -- the main thing I think of 2 arguments and disagree with them, they could do 3 3 is fragrance, and certainly we've been concerned 4 with fragrance and have an understanding of what 4 Q Okay. So let's talk about -- let's just 5 5 fragrance materials are, and -go here, because I think this will be -- and then 6 Q Do you know whether or not -- did -- did 6 we'll just break for lunch. I think it's lunch. 7 you ask them whether it contains nickel and 7 Yeah, we'll break for lunch. 8 8 chromium and silica or any of those other --If you go to page -- if you go to 9 talcum powder comes from the ground, right? 9 page 21 of the Introduction. 10 10 A Yes. A This is 21 --11 Q Okay. And those are things that are 11 Q I'm sorry, 24 of 39 if you're looking at not -- that are not desirable in talc either, 12 12 the --13 right? 13 A 24 of 39, okay. 14 14 Q So at the very last, it talks about A Correct. experimental studies and clinical trials. Do you 15 Q Okay. So my question is, your whole 15 16 premise for this opposition for Citizen's 16 see that? 17 Petition -- Dr. Epstein wanted a warning on talcum 17 It says: "In the contest of human 18 powder products, which is everything in the 18 studies, experimental design has come to represent 19 bottle. Right? 19 the gold standard of cause and effect relationship 20 A Yes. 20 as the randomized clinical trial." 21 Q Your response focused on talc. Correct? 21 22 MR. LOCKE: Objection. 22 Q Okay. First of all, would you agree THE WITNESS: Which makes up the vast with me -- I mean, you've done this for a long 23 23 24 majority of the product. 24 time -- you would agree with me that it would be 25 BY MR. TISI: 25 both unfeasible and unethical to conduct a Page 561 Page 563 1 Q The vast majority of the product but not 1 clinical trial where the hypothesis was, Let's 2 all of the product. Correct? 2 give people talcum powder products and see whether 3 A I mean, we -- we have other lines of 3 it causes ovarian cancer. 4 evidence, and our -- and -- and the arguments that 4 A Right. That's not how you do studies. 5 we make are -- I mean, we're not alone in this. 5 Q You can't do it. 6 We're consistent that there is --6 A Right. 7 Q I understand. But there are other 7 Q So you can't -- so a clinical trial, if 8 8 anyone were to kind of march on into court and people who think differently than you, right? You 9 say you're not alone. There are other scientists 9 say, You know, there were no clinical trials, you 10 who look at the evidence and think differently 10 would expect to see clinical trials on this? 11 11 A Correct. That's not how it's done. than you. 12 A As -- as we've discussed. 12 Q Right. So the next question is they have to rely on epidemiology research. Do you see 13 Q And they weren't in the room when you 13 14 were discussing with the FDA, were they? 14 that? 15 A But, again, I -- I don't think we were 15 A Yes. 16 even having --16 Q Okay. And they lay out a methodology here. It says: "An epidemiologist must observe 17 Q No, they were -- they were not in the 17 observational methods to cause and effect 18 18 room. MR. LOCKE: Let her finish the question. 19 relationship that preclude direct intervention on 19 20 20 manipulation of study subjects." BY MR. TISI: 21 21 Q They were not -- only you were in the That's experiments, right? 22 room. And --22 A Yes. 23 A But we submitted this -- these are our 23 Q All right. "Because of that fact, 24 24 criteria for establishing cause and effect arguments; they get posted on the website. 25 Q Okay. relationship are inherently different when

47 (Pages 560 to 563)

	Page 564		Page 566
1	utilizing epidemiologic methods versus	1	A I that's reasonable.
2	experimental ones."	2	Q Okay. And that's not unusual in
3	Do you see that?	3	science. Right?
4	A Yes.	4	A Correct. Scientists disagree.
5	Q Okay. And so what they're saying is,	5	Q I mean, for years there was a debate
6	Look, you can't do a clinical trial because it's	6	about whether cigarette smoking causes cancer,
7	unworkable, unethical. You just can't do it. So	7	right?
8	you got to do it a different way.	8	MR. LOCKE: Objection. Beyond the
9	A Yes.	9	scope.
10	Q Okay. And one of the ways that they do	10	THE WITNESS: Yeah, before my time. I
11	it, they describe a a system or framework,	11	think I've always known it, but yes.
12	okay, and the framework is what we've called the	12	BY MR. TISI:
13	Bradford Hill criteria, and you've seen that	13	Q Right. But you know that there was a
14	before?	14	debate for decades on that question.
15	A Yes.	15	MR. LOCKE: Same objection.
16		16	=
	•		THE WITNESS: I really don't. So
17	you're familiar with what that is?	17	BY MR. TISI:
18	A Yes.	18	Q You don't know that?
19	Q Okay. And just to be clear,	19	A No.
20	Dr. Huncharek and Muscat make it clear, but I want	20	Q You must be much younger than me.
21	to make clear that from PCPC agrees with it as	21	But you do know that that it is not
22	well, these are criteria that are not really	22	unusual for scientists to look at a question,
23	criteria. They're they're considerations.	23	apply these factors, and come out with different
24	A They're right. Guidelines, I guess,	24	conclusions, correct?
25	or right.	25	A Yes.
	Page 565		Page 567
1	Q Right. They're not things where you	1	Q And so these are not criteria so much,
2	kind of it's not like a menu where you check	2	these Hill factors, as they are a framework of
3	off, Okay, we got this one, we got that one, we	3	considerations.
4	got this one, right?	4	MR. LOCKE: Objection. Beyond the
5	A You use it for overall, right,	5	scope.
6	assessment.	6	BY MR. TISI:
7	Q Right. And they make that point. They	7	Q True?
8	say: "The Hill criteria, as they've become known,	8	A "Framework" is what it says here.
9	are not simply a checklist of requirements that	9	Q And you agree with that?
10	must be met in order to determine a cause and	10	A Yes.
11		l	
	effect relationship."	11	Q They also say something here that I
12	effect relationship."  And that's true, right?	11	Q They also say something here that I that I want to see whether you agree with and you
12	And that's true, right?	12	that I want to see whether you agree with and you
12 13	And that's true, right?  A Yes.	12 13	that I want to see whether you agree with and you agreed with at the time.
12 13 14	And that's true, right?  A Yes.  Q Okay. And so these factors, and I think	12 13 14	that I want to see whether you agree with and you agreed with at the time.  On page 26 of 29 well, one of the
12 13 14 15	And that's true, right?  A Yes.  Q Okay. And so these factors, and I think they have nine of them here, are factors that are	12 13 14 15	that I want to see whether you agree with and you agreed with at the time.  On page 26 of 29 well, one of the things they say here is actually, let's go
12 13 14 15 16	And that's true, right?  A Yes.  Q Okay. And so these factors, and I think they have nine of them here, are factors that are considered, correct?	12 13 14 15 16	that I want to see whether you agree with and you agreed with at the time.  On page 26 of 29 well, one of the things they say here is actually, let's go back.
12 13 14 15 16 17	And that's true, right?  A Yes.  Q Okay. And so these factors, and I think they have nine of them here, are factors that are considered, correct?  A Yes.  Q And and kind of what we were talking	12 13 14 15 16 17	that I want to see whether you agree with and you agreed with at the time.  On page 26 of 29 well, one of the things they say here is actually, let's go back.  It says: "Overview. The possibility
12 13 14 15 16 17 18	And that's true, right?  A Yes.  Q Okay. And so these factors, and I think they have nine of them here, are factors that are considered, correct?  A Yes.  Q And and kind of what we were talking about before that I think is really important to	12 13 14 15 16 17 18	that I want to see whether you agree with and you agreed with at the time.  On page 26 of 29 well, one of the things they say here is actually, let's go back.  It says: "Overview. The possibility that perineal talc exposure could be associated with the development of ovarian cancer was
12 13 14 15 16 17 18 19	And that's true, right?  A Yes.  Q Okay. And so these factors, and I think they have nine of them here, are factors that are considered, correct?  A Yes.  Q And and kind of what we were talking about before that I think is really important to kind of why this has been a debate is because	12 13 14 15 16 17 18	that I want to see whether you agree with and you agreed with at the time.  On page 26 of 29 well, one of the things they say here is actually, let's go back.  It says: "Overview. The possibility that perineal talc exposure could be associated with the development of ovarian cancer was initially derived from a case controlled study
12 13 14 15 16 17 18 19 20	And that's true, right?  A Yes.  Q Okay. And so these factors, and I think they have nine of them here, are factors that are considered, correct?  A Yes.  Q And and kind of what we were talking about before that I think is really important to kind of why this has been a debate is because different scientists looking at the evidence have	12 13 14 15 16 17 18 19 20	that I want to see whether you agree with and you agreed with at the time.  On page 26 of 29 well, one of the things they say here is actually, let's go back.  It says: "Overview. The possibility that perineal talc exposure could be associated with the development of ovarian cancer was initially derived from a case controlled study published in 1982."
12 13 14 15 16 17 18 19 20 21 22	And that's true, right?  A Yes.  Q Okay. And so these factors, and I think they have nine of them here, are factors that are considered, correct?  A Yes.  Q And and kind of what we were talking about before that I think is really important to kind of why this has been a debate is because different scientists looking at the evidence have come to different conclusions about these	12 13 14 15 16 17 18 19 20 21 22	that I want to see whether you agree with and you agreed with at the time.  On page 26 of 29 well, one of the things they say here is actually, let's go back.  It says: "Overview. The possibility that perineal talc exposure could be associated with the development of ovarian cancer was initially derived from a case controlled study
12 13 14 15 16 17 18 19 20 21 22 23	And that's true, right?  A Yes.  Q Okay. And so these factors, and I think they have nine of them here, are factors that are considered, correct?  A Yes.  Q And and kind of what we were talking about before that I think is really important to kind of why this has been a debate is because different scientists looking at the evidence have come to different conclusions about these different factors.	12 13 14 15 16 17 18 19 20 21 22 23	that I want to see whether you agree with and you agreed with at the time.  On page 26 of 29 well, one of the things they say here is actually, let's go back.  It says: "Overview. The possibility that perineal talc exposure could be associated with the development of ovarian cancer was initially derived from a case controlled study published in 1982."  Do you see that?  A Yes.
12 13 14 15 16 17 18 19 20 21 22	And that's true, right?  A Yes.  Q Okay. And so these factors, and I think they have nine of them here, are factors that are considered, correct?  A Yes.  Q And and kind of what we were talking about before that I think is really important to kind of why this has been a debate is because different scientists looking at the evidence have come to different conclusions about these	12 13 14 15 16 17 18 19 20 21 22	that I want to see whether you agree with and you agreed with at the time.  On page 26 of 29 well, one of the things they say here is actually, let's go back.  It says: "Overview. The possibility that perineal talc exposure could be associated with the development of ovarian cancer was initially derived from a case controlled study published in 1982."  Do you see that?

Page 568 Page 570 1 Q "Since that time a number of additional 1 Q Do you agree with it? 2 reports have addressed this question with most 2 MR. LOCKE: Objection. Beyond the 3 showing odds ratio between 1.0 and 2.0." Correct? 3 scope. 4 A Yes. 4 BY MR. TISI: 5 5 Q Okay. That's -- that's between -- if we Q On behalf of PCPC, is that something 6 were to -- and for jurors who don't understand 6 that PCPC agreed with when they sent this to the 7 odds ratios, that's basically showing anything 7 8 from a 1 percent increase to 100 percent increase. 8 MR. LOCKE: Objection. Beyond the 9 A Correct. 9 scope. 10 Q Okay. 2.0 would be a doubling of the 10 THE WITNESS: We -- yes. 11 risk. 11 BY MR. TISI: 12 12 Q Thank you. A Correct. Did PC -- they note down here that 13 Q And that's what they call -- they call 13 14 this a weak effect. Correct? obviously -- actually, let's skip that. 14 15 MR. LOCKE: Is this a good time for a 15 A Yes. 16 Q So just using the nomenclature that 16 lunch break? 17 Dr. Muscat and Huncharek used, they would 17 MR. TISI: Yeah, it's a good time to 18 characterize something less than a hundred percent 18 break. 19 doubling of the risk as being weak. THE VIDEOGRAPHER: The time is 19 20 A Per an epidemiology study, yes. 20 12:32 p.m., and we're going off the record. 21 Q Right. But in practical reality, if you 21 (Lunch recess.) THE VIDEOGRAPHER: The time is 1:12 22 find something that doubles your risk, that is a 22 clinically -- if it is a true cause, that's p.m., and we are back on the record. 23 23 clinically significant, correct? 24 24 BY MR. TISI: 25 A If it --25 Q Dr. Loretz, we were talking about the Page 569 Page 571 MR. LOCKE: Objection. 1 1 purity of talcum powder products that -- that's in 2 THE WITNESS: -- is a true cause. 2 the bottle, and distinguishing it from talc in the 3 MR. LOCKE: Beyond the scope. 3 mine and et cetera, and before we took a break. BY MR. LOCKE: 4 4 Do you remember that --5 5 Q If it is a true cause. All right. A Yes. 6 So now the question is, if you go to 6 Q -- session? 7 page 23, they make the point, and they go out of 7 I have a couple more questions about 8 their way to make it, actually, because they say: 8 that and the document, but before I do, the focus 9 "It is important to point out that although an 9 of the PCPC response was to focus on the 10 association is weak" --10 carcinogenic -- carcinogenic -- I'm sorry, let me 11 MR. LOCKE: Just wait -- wait one 11 say it again. 12 second. You're referring to 23 at the top --12 The focus of the biologic plausibility 13 MR. TISI: I'm sorry. 26 of 39, aspect of Dr. Muscat and Huncharek's response was 13 14 14 focused on two things. Number one, that talcum correct. 15 BY MR. TISI: 15 powder products had been asbestos-free since 16 Q "It is important" -- it says on the 16 1970s, it had been eliminated. first full paragraph: "It is important to point 17 17 Do you remember that? 18 out that although an association is weak" -- and 18 A Yes. 19 as they define "weak," that can include a doubling 19 Q Okay. Number two is that pure talc did 20 of the risk, right? 20 not -- there was no evidence that pure talc was 21 21 A Up to. a -- had a mechanism that would lend itself to the 22 Q Right. 22 suggestion that it was a cause of ovarian cancer. 23 -- "this does not rule out a causal 23 Correct? 24 connection." Do you agree with that? 24 A Right. 25 A That's what it says. 25 Q Right. So you were looking at asbestos,

49 (Pages 568 to 571)

Page 572 Page 574 1 not there anymore; and talc, not a problem. 1 attention that there are potentially other 2 Right? 2 components of talcum powder products, constituents 3 3 A Yes. of talcum powder products, that need to be 4 Q Okay. So -- but -- and we talked about 4 considered when addressing the question as to 5 5 the question about whether or not talc really was whether or not talcum powder products are a 6 asbestos-free before the -- the break, and I'm not 6 potential cause of ovarian cancer? 7 7 going to go back into that again, but that was an A Are you talking about constituent 8 8 area of concern from the FDA's perspective, and ingredients or are you talking about constituent 9 9 they raised it at the May meeting, May 2009. impurities? 10 10 A And -- and I'm sure -- we responded by Q Anything. Anything in the --A I mean --11 letting them know that the testing that had been 11 12 done and continued to be done. 12 Q You know, honestly, and I'm trying to be 13 Q Correct. Using --13 -- I'm trying to be as expansive as I can in this 14 question. A And their own testing as well that they 14 What I'm saying is, if I go to Walmart 15 did. 15 16 Q Using the 12 -- we'll talk about that in 16 and pull a bottle of talcum powder, Johnson's Baby 17 a moment, but using the 20-year-old standards that 17 Powder off the shelf, whether they're impurities 18 Dr. Bailey mentioned that they would be willing to 18 or whether they're intended ingredients or 19 19 whatever, there are other constituents in there update. 20 A Which --20 that have to be considered in the algorithm of 21 MR. LOCKE: Objection. 21 whether or not talcum powder products cause 22 22 ovarian cancer. True? BY MR. TISI: 23 23 Q Correct? A There are impurities that are covered by 24 A Which they -- which, again, are not 24 the specification, for example. 25 substantially different from what is used today 25 Q Right. But -- but so my -- my question, Page 573 Page 575 1 1 and I'm probably being inartful, so let me see if by, for example, USP. 2 Q Okay. So we discussed asbestos and 2 I can phrase it. 3 talc, and I started getting into the question, but 3 We've previously discussed talcum powder 4 you know what's in the bottle, it's not only 4 products as kind of this two-dimensional thing, 5 asbestos and talc. Remember we started that 5 either it has asbestos or it doesn't have 6 discussion before the break. 6 asbestos. Right? So --7 7 A Yes. A Okay. 8 8 Q Okay. And in fact, that had been Q So I'm -- I'm kind of moving off that 9 brought to your attention long before this 9 because it's not that simple, is it? 10 petition was filed that talcum powder products may 10 MR. LOCKE: Objection. 11 contain things that might or might not be 11 BY MR. TISI: 12 carcinogens. 12 Q The question about whether or not there 13 A Okay. 13 is a biologically plausible mechanism by -- that 14 Q Well, is that true? 14 would explain the epidemiology studies which 15 A I'm not sure what you're referring to. 15 showed, as Dr. Huncharek and Muscat point --16 Q Well, I'm asking you that before I --16 pointed out, a risk between one and -- you know, and a hundred percent, right? One to two, what 17 A I mean in the specific --17 Q -- show you a document --18 you say is called mild. The question should be 18 19 looked at comprehensively as to what is in the 19 A In the specification we have some limits 20 set for a few other possible contaminants. 20 bottle. 21 21 Q Well, had it ever been brought to your MR. LOCKE: Objection. 22 attention that talcum -- you mentioned -- we 22 BY MR. TISI: 23 talked about fragrances, we talked about other 23 O Right? A Yes, I'm not aware of anything that --24 24 things. 25 Had it ever been brought to your 25 Q Well, did you look? I mean, the

50 (Pages 572 to 575)

	Page 576		Page 578
1	question is this this report that was sent to	1	throw it at you.
2	the FDA takes a very elemental view of the	2	BY MR. TISI:
3	question. Prior to 1970, there was potential	3	Q I'm really going to only ask you about
4	contamination with asbestos. It went out, and	4	the first page.
5	what's left is talc.	5	A Mm-hmm.
6	MR. LOCKE: Objection.	6	Q So just for the record, what this is,
7	BY MR. TISI:	7	this is a document from IMA Europe. What is IMA?
8	Q And talc doesn't cause cancer. That was	8	A Industrial Minerals Association.
9	the essence of their argument, correct?	9	Q So it's another trade group like the
10	MR. LOCKE: Objection.	10	PCPC?
11	THE WITNESS: Well, no, I think there's	11	A Correct.
12	more in their arguments I mean	12	Q Okay. It represents talc
13	BY MR. TISI:	13	A Mineral manufacturers, and talc is a
14	Q On the biologic plausibility issue, I	14	subset of that.
15	mean, they talked about dose-response and all that	15	Q Okay. And it's to Dr. Muscat, correct?
16	stuff. But I'm talking about on the biologic	16	A Yes.
17	plausibility, on the question of whether there is	17	Q Okay. Is this the same Dr. Muscat who
18		18	wrote the report a couple of years later for you?
	a an explanation that makes sense as to why	19	
19	there's this persistent increased risk, they	20	
20	looked basically at asbestos in talc.		Q Robert Glenn at Crowell & Moring. R.
21	MR. LOCKE: Objection.	21	Glenn.
22	THE WITNESS: Yeah, I'm not sure what	22	A I'm sure it is there. I don't see it.
23	what other what else you wanted to be them	23	Q It's right after Joshua Muscat.
24	to address.	24	A Yep. Yes.
25	BY MR. TISI:	25	Q R. Glenn, Crowell & Moring, that's the
	Page 577		Page 579
1	Q Well, are there other things, either	1	lawyers for
2	contaminants or intended ingredients, that should	2	A Yes.
3	be factored into the equation that were not	3	Q they represent the lawyers for for
4	addressed by their had let me rephrase the	4	Imerys.
5	question. And I'm sorry, I'm not being artful	5	Linda Loretz is you?
6	here.	6	A Yes.
7	Are there other constituents within	7	Q Eric Turner, which is Luzenac, which is
8	cosmetic talc that should be should have been	8	Imerys?
9	considered on this biologically plausible	9	A Yes.
10	mechanism issue that were not?	10	Q Jocelyn Ferret, which is Luzenac
11	A I I no, I'm not aware of	11	A Yes.
12	Q Okay. But no other constituents were in	12	Q Imerys?
13	fact considered, right?	13	So and cc'd was Steve Mann for
14	A There's a specification that covers	14	from J&J. You see that?
15	some.	15	A Yes.
16	Q Okay. Were you ever made aware prior to	16	Q And it's entitled "IARC, Dr. Huncharek
17	this time that there were other potential	17	Comment." Do you see that?
18	constituents that had been classified as a	18	A Yes.
19	carcinogen other than asbestos?	19	Q Okay. And this is February 13th, 2006.
-			This was during the IADC proceedings?
20	A No.	20	This was during the IARC proceedings?
	<ul><li>A No.</li><li>Q I'm going to show you what I would like</li></ul>	21	A Okay. Yes.
20		l .	
20 21	Q I'm going to show you what I would like	21	A Okay. Yes.
20 21 22	Q I'm going to show you what I would like to have marked as Exhibit No. 59.	21 22	A Okay. Yes. Q Is that right?

51 (Pages 576 to 579)

Page 580 Page 582 1 representative at IARC at the time. 1 When you filed your response to the 2 A Correct. 2 Citizen's Petition, and addressed the issue of 3 Q Yes? 3 biologically plausible mechanisms, did you ask 4 A Yes. 4 Dr. Muscat and Huncharek to look at each of the 5 5 Q And it says: "What should be constituents in cosmetic talc sold in talcum б acknowledged is the difference between cosmetic 6 powder products and see whether or not they 7 talc grade, i.e., grade of talc, pure and 7 individually or collectively might explain the 8 extremely white, sold by talc producers at the 8 increased risk? 9 gate of the mine" -- right? 9 A I think the other ingredients that are 10 A Yes. 10 used in talc are not carcinogenic. 11 Q -- "and cosmetic baby or body talc 11 Q Well, did you -- what are the other talcs -- did you ask J&J to provide you with a 12 powder, i.e., loose powder manufactured by 12 13 cosmetic manufacturers containing talc or corn 13 list of -- list of products using talc? 14 starch, and also in the case of other minerals, A List of ingredients used in talc? 14 15 kaolin, Ti02, and all case additives such as 15 Q List of ingredients of talc. 16 perfumes and biocides, hexachlorophene in the 16 A No. 17 past, a Category 3 IARC carcinogen" -- I won't 17 Q Okay. So how do you know that none of 18 even pronounce that -- imidazolidinyl urea" -- I 18 them are carcinogenic? 19 don't know how to pronounce that -- "triclosan, et A We don't use carcinogens in cosmetics. 19 20 cetera. See documents sent by Jocelyn Ferret this 20 Q You don't know what was in the talc that 21 morning." 21 you were talking about with -- with the FDA, do 22 22 A Uh-huh. you? 2.3 Q Okay. And the point that's being made 23 MR. LOCKE: Objection. 24 here -- and, first of all, you got this. The 24 BY MR. TISI: 25 point that's being made here is one of the things 25 Q I mean -- I understand that Page 581 Page 583 1 that really ought to be considered when you're 1 aspirationally you don't want to have 2 talking about talcum powder products and the risk 2 carcinogen -- carcinogens in the talc that you 3 of ovarian cancer, you need to think about not 3 sell to women who may use them to dust themselves. 4 I -- I understand that that might be an 4 only what comes out of the mine but what's in the 5 5 bottle. aspiration. 6 MR. LOCKE: Objection. 6 But in light of the fact that this issue 7 BY MR. TISI: 7 had been pending for decades, and now was firmly 8 8 Q Right? before the FDA in the Citizen's Petition, do you 9 9 think that it might have been prudent to identify, A Okay. 10 Q Well, I mean, I'm asking you whether you 10 just as was identified in this document I showed 11 11 agree with that or not. you, Exhibit No. 59, what all the constituents are 12 A I can agree with that without thinking 12 in order to do a searching analysis of whether or 13 that this explains anything. 13 not there was something in the talc that might be 14 Q Okay. 14 responsible for this increased risk? A Yes. 15 15 MR. LOCKE: Objection. 16 Q Okay. 16 THE WITNESS: I mean, I guess, you know, A I mean you think about -- when you think 17 I can look at this, and I recognize these 17 about safety of a product -ingredients, and --18 18 19 Q Well, I'll take it and I'll put it aside 19 BY MR. TISI: 20 20 Q Well, these are some of them and there then. 21 21 A No, I'm just saying when you think about may be others. I mean you -- what about did you 22 safety of a product, you think about everything in 22 know how much silica was in the -- if any, was in 23 the product. So... 23 the talcum? 24 Q Well, that's right. And -- and that's 24 A There's specifications. 25 kind of where I'm going here. 25 Q I understand the specifications. Apart

52 (Pages 580 to 583)

Page 584 Page 586 1 from the specifications, do you know how much 1 constituents, right? 2 silica there was? 2 A I believe that's true. 3 A No. 3 Q And they did not talk about any of the 4 4 fragrance or any of the other issues that are in Q Do you know how much magnesium there 5 was? 5 there, correct? 6 A For the same reason. A I'm not sure that's regarded as a 6 7 carcinogen. 7 Q Okay. Talk about cobalt? 8 Q What about nickel? 8 A No. 9 A I know there was at one point, there was 9 O Arsenic? 10 a report and it was our understanding, because 10 There is a specification for arsenic. Α 11 this is what we were told, that it was bound up in 11 Q Right. But saying something has a specification does not mean that it's absent, 12 the talc and not free nickel. 12 13 Q Well, who told you that? 13 correct? 14 A I think it was J&J. 14 A Right. I mean there's a specification 15 Q Okay. What about -- what about set, I believe it's 3 parts -- I believe it's 3 15 16 silica -- is nickel a carcinogen? parts per billion. 16 17 A I don't believe it's recognized as an 17 Q Right. 18 ovarian carcinogen, but I'm -- I'm not an expert A So it could be up to that. 18 19 on nickel cariogenicity. Q So when you say something meets 19 Q Okay. If there -- if there was nickel, 20 20 specifications, the specifications are only as 21 it would be something that you would want to look 21 good as the sensitivity and specificity of the 22 22 test that's being used. at, right? A I think it depends. 23 23 A Well, the specifications are designed to 24 MR. LOCKE: Objection. 24 set a level that would be acceptable, i.e., safe, 25 THE WITNESS: I mean --25 and the method that goes with that should be Page 585 Page 587 1 1 designed to --BY MR. TISI: 2 Q Well, my -- my larger point here, 2 Q And did --3 Doctor -- and, you know, I don't want to belabor 3 A -- test at that level. Q And did you -- because you were involved 4 the issue -- is when you responded to the FDA, the 4 5 with working with those standards, right, and Citizen's Petition, there is nothing in this 5 6 response that addresses the potential of any 6 helping develop those standards, right? 7 contaminants in the product, even ones that meet 7 A Oh, no, that was before my time. 8 8 Q Okay. Well, I didn't mean you. I meant specifications. Is there? 9 MR. LOCKE: Are you referring solely to 9 PCPC. 10 biological plausibility? 10 A PCPC, yeah, absolutely. Q I was putting the PCPC hat on. 11 BY MR. TISI: 11 12 Q On the biologic plausibility issue, 12 A Okay. Sorry. Got it. Q All of those specifications were 13 there's no discussion at all, nickel, chromium, 13 14 silica, asbestos to the extent that's in it since 14 developed before the epidemiological studies on 15 the 1970s, there's no discussion of that, is 15 ovarian cancer, true? 16 there? 16 A Developed but then updated, post. Q I guess my question is, did any of 17 A Because those weren't recognized as 17 18 those -- were any of those specifications, to your being risks. Just as I state some of these are 18 19 knowledge, analyzed by PCPC in the context of not --19 20 Q Okay. And that's -- it was not part of 20 looking for biologically plausible mechanisms for 21 Dr. Huncharek and -- and Muscat's analysis to the 21 ovarian cancer? 22 22 A I guess I'd go back to, I can see a FDA, right? 23 MR. LOCKE: Objection. 23 listing here that it just --24 24 Q I didn't ask you that question. You BY MR. TISI: 25 Q They did not mention those other 25 told me that you could answer the question without

53 (Pages 584 to 587)

	Page 588		Page 590
1	looking at that document.	1	quite here yet.
2	A Okay.	2	A Okay.
3	Q So I'm not looking at that document.	3	Q So we'll put it up on the screen and
4	A Okay.	4	have it.
5	Q My question is, did you did PCPC in	5	Dr. Epstein had previously filed a
6	the 2000s, while these epidemiological studies	6	Citizen's Petition before the FDA in the 1990s on
7	were being published, analyze the specifications	7	this issue, correct?
8	for the elimination of these other constituents in	8	A Yes.
9	light of those epidemiology epidemiological	9	Q And at that time who did that petition
10	studies?	10	go to, do you know?
11	A We no, we were not aware of other	11	A John Bailey, I believe.
12	contaminants and/or ingredients that seemed to	12	Q While he was at the FDA?
13	offer a biological plausible reason for the cause	13	A I believe so, yes.
14	of ovarian cancer.	14	Q And did the FDA ever respond to that?
15	Q Well, cobalt might, right? Did you look	15	A Yes, they rejected that petition.
16	at the cobalt cobalt standards in connection	16	Q Well, didn't they didn't Dr. Bailey
17	with ovarian cancer your standards?	17	write a letter to Mr to Dr. Epstein that
18	A I was	18	said and we'll bring it up here.
19	MR. LOCKE: Objection.	19	MR. TISI: Can we bring it up, please?
20	THE WITNESS: I would say we had no	20	MR. GOLOMB: I don't
21	information that the cobalt contamination was a	21	MR. TISI: Well, we'll attach it as an
22	problem, and I'm not aware that cobalt has been	22	exhibit. No, that's it. Oh, is that it? No
23	implicated in ovarian cancer, although	23	yeah.

Is that accurate? A Yes. Q Okay. And this Citizen's Petition, the one we've been talking about all day, wasn't responded to for five years. Correct? A Yes. Q And that's the same division that

54 (Pages 588 to 591)

Page 592 Page 594 1 that is -- I think it's pretty typical for 1 questions. 2 petitions that they, I believe, have some 2 A Okay. 3 3 Q The first question is going to be obligation to respond, but that response can be to 4 say that we're not -- we're not done yet. 4 communications with the FDA on talc and ovarian 5 5 (Exhibit No. 60 was subsequently cancer association or risk. 6 marked for identification.) 6 And the second question is going to be 7 7 on specifications for talc, and particularly with BY MR. TISI: 8 8 regard to asbestos. Okay? Q Okay. I'm going to mark it as 9 9 Exhibit No. 60 when we get it. So the first question, in 2010, do you 10 recall any question or any communications with FDA 10 So let me ask you this: I'm going to go 11 through each year, and I'm going to ask you, you 11 regarding the issue of ovarian cancer and talc? responded to the FDA questions that they asked 12 A I don't recall any, no. 12 13 you, correct, at this May 9th --13 Q Any communications with the FDA on any 14 specifications for issues relating to asbestos or A Yes. 14 15 15 levels of asbestos in talc? Q -- meeting? 16 Did PCPC in 2009, other than this 16 A Not that I recall. 17 meeting, have any communications directly or 17 Q Okay. 2011, same two questions. If you 18 indirectly with FDA relating to asbestos in talc 18 want, I'll separate them out. 19 19 A I'm just trying to make sure I'm not other than responding to the questions? forgetting something. I don't recall, no. 20 A You can refresh my memory if there's 20 21 any. I -- I can't recall any. 21 Q 2012? 22 Q This is -- you can't recall any. 22 A And again, the question was on 2009, did PCPC have any direct or 23 2.3 asbestos --24 indirect communications with FDA regarding the 24 Q It was on the association between 25 issue of talc and ovarian cancer? 25 ovarian cancer and talc or the asbestos levels or Page 593 Page 595 MR. LOCKE: Other than what we've 1 1 specifications for talc. 2 discussed? 2 A And did you say meetings? 3 MR. TISI: Other than what we -- I'm 3 Q Any communications directly or sorry, I meant to say 2010. I'm sorry. 4 4 indirectly. 5 THE WITNESS: That's what I was confused 5 A I guess --6 on. I was trying to --6 Q I guess what I'm trying to do in kind of 7 7 BY MR. TISI: a summary fashion is to ask you about any Q Yeah, I'm sorry. 8 communications. These are the ones that I've been 8 9 A -- decide if you --9 able to find. I found -- you know, I can go 10 Q Yeah. No, no, it was --10 through your answers --A Okay. Got it. 11 11 A Mm-hmm. 12 Q It was a mistake. 12 Q -- to the FDA questions and do that. 13 A Okay. 13 A Mm-hmm. 14 Q Just to be clear, let me -- I'm going to 14 O Other than that. 15 go through each year --15 A Yeah, and I'm just trying to be careful A Okay. so I'm being -- being accurate. 16 16 Q -- and I want to find out what your 17 17 Q Yeah. communications were in each year. 18 A And I can say I'm not aware of any. I 18 A That's what I thought you were doing. know in 2000 -- when FDA, for example, did their 19 19 20 20 sampling plan, could someone in meeting with the Okay. 21 21 Q So 2010. FDA on something else asked a question, how's it 22 A I want to be careful not to forget 22 going, you know, that's possible. But a meeting 23 something. So the question was anything to do 23 specific to that or something -- some deep 24 24 discussions or work on a specification, not that with --25 Q Let's -- I want to ask you two separate 25 I'm aware of.

55 (Pages 592 to 595)

Page 596 Page 598 1 Q Okay. Let me see if I can ask it this 1 discuss with your members whether you had a more 2 way, since we got through 2011. 2 fulsome survey that could be conducted either of 3 3 currently marketed products or of, you know, When is the next time, if ever, PCPC 4 directly or indirectly spoke to the FDA about talc 4 samples that had been stored over time? 5 5 and ovarian cancer? A No, I think our answers -- when we 6 A I'm just trying to think if I'm 6 answered FDA to their questions about testing, et 7 forgetting anything. 7 cetera, I think -- I mean, that addressed it kind 8 8 I'm -- I'm not recalling. Again, there of in an ongoing way. So --9 was the -- FDA did the assessment on the asbestos. 9 Q Okay. You basically said, We tested it 10 There could have been conversations. I --10 as we always did? 11 Q Anything that you -- that you know of as 11 A Yeah. 12 you sit here right now, anything to -- and are 12 Q So, as I understand it, from -- do you 13 prepared to testify to as a -- as a representative 13 know who Susan Nicholson is from J&J? 14 of PCPC? A Nettesheim? 14 15 A Not that I can think of. 15 O No, Nicholson. 16 16 A Oh, no. Q Okay. When is the next time you talked 17 17 about asbestos levels in talcum powder products or Q I understand that J&J had a meeting with 18 asbestos testing in talcum powder products, if 18 FDA in 2018. Do you know anything about that? 19 A That would be this year. 19 ever? 20 MR. LOCKE: With the FDA? 20 Q That would be this year. 21 MR. TISI: With the FDA. 21 A No. 22 22 Q Do you know of any communications that THE WITNESS: Oh, we're aware that FDA the company had with FDA about the lawsuits that 23 did their study, and we're aware, I mean, that our 23 24 members test in a -- on an ongoing basis. 24 have been pending and verdicts that have been 25 BY MR. TISI: 25 obtained against the manufacturers of talc --Page 599 Page 597 1 Q Well, okay, let's -- since you raised 1 A I do not. 2 that issue, FDA did a sampling of -- of certain 2 Q -- and talc products? 3 products bought in the Washington, D.C. area, I 3 MR. LOCKE: Well, just to clarify, when 4 think they said five out of nine, they -- there 4 you say "the company," you're talking about J&J? 5 was -- that wasn't a study, was it? That wasn't a 5 MR. TISI: J&J. 6 study, correct? 6 THE WITNESS: No. 7 A They -- they --7 BY MR. TISI: 8 8 MR. LOCKE: Objection. Q Or -- or Imerys. 9 THE WITNESS: Yeah, that's not exactly 9 Are you aware of any communications 10 what they did. They did -- I think they did from 10 about the lawsuits that have -suppliers, and then they did 30-some products off 11 11 A That those companies have had with FDA? 12 the shelf. 12 Q Yes. 13 BY MR. TISI: 13 A No. 14 Q Right. But they -- the FDA admitted 14 Q Okay. So other -- the last meeting that 15 that that was not a --15 you know of that you had that was formally or 16 A The FDA said it's not exhaustive. 16 informally with the FDA on the issues of talcum 17 Q It's not -- they -- they went further 17 powder products and ovarian cancer was in May of than that. They said it was not -- they could not 18 18 2008? guarantee that this was a true sampling of talcum 19 19 MR. LOCKE: '9. 20 powder products out there, correct? 20 THE WITNESS: '9. 21 MR. LOCKE: Objection. 21 BY MR. TISI: 22 THE WITNESS: They said it was not --22 Q '9. I'm doing what -- what Dr. Bailey 23 not a final answer, yes. 23 did. Sorrv. 24 24 BY MR. TISI: Just to be clear, the last time that 25 Q Right. And in that context, did you 25 you're aware of that PCPC had any direct contact

56 (Pages 596 to 599)

Page 600 Page 602 1 with the FDA, either directly or indirectly, was 1 A Correct. 2 the meeting in May of 2009, and any follow-up to 2 Q Now, if go to page 2, there's a section 3 called "Manuscript Reviews." Do you see that? 3 that meeting that was requested by the FDA? 4 A Something specific to that topic. As I 4 A Okay. Yes. 5 5 say, it doesn't mean there weren't -- you know, Q And the second bullet point says: "The б б meta-analysis manuscript -- manuscript prepared by when FDA unveiled their results about talc 7 testing, it doesn't mean somebody didn't ask a 7 Dr. Gross, "and it has a number, "was discussed. 8 8 question or whatever, but --It was agreed on the scientific content of the 9 Q Well, do you know of any questions they 9 manuscript was good, but the format lacked 10 might have asked? 10 clarity," and it goes on and on. Do you see that? 11 A No, I don't. 11 A Yes. 12 Q Okay. Okay. 12 Q Okay. Are you familiar with the study 13 A But, I mean, we have FDA, for example, 13 by Dr. Gross? 14 presents at kind of our meetings sometimes. I 14 A I saw the manuscript in my preparation could see a question being asked. I just --15 15 for this deposition. Q But you don't know of any. 16 Q Now, I'm going to show you there was a 16 17 17 A No, I do not. published article by Gross and Berg. Have you 18 Q All right. So let's go to the second 18 seen that? question, the second area that I said we would 19 19 A I think that sounds familiar. 20 cover, which is studies and consultants. 20 Q May I see --21 A Okay. 21 (Counsel conferring.) 22 Q I'm kind of done with the Citizens 22 BY MR. TISI: 2.3 Petitions --23 Q Okay. I'm going to mark this as Exhibit 24 A Okay. 24 No. 61, and I'm actually going to give you 62, 25 25 which is I think the manuscript that you just may Q -- and contacts with the FDA issue. Page 601 Page 603 1 A Okav. 1 have referred to. 2 Q Let's start in the 1990s. I'm going to 2 (Exhibit Nos. 61 and 62 were 3 go back to Exhibit No. 47, which is the notes from 3 marked for identification.) 4 April 12th, 1994. 4 MR. TISI: Here is your copy. And here 5 A Okay. 5 is 62. 6 Q And that's the task force document. 6 BY MR. TISI: 7 A Yes. 7 Q Now, 61 is the published article, 8 Q And just -- you may have mentioned this 8 correct? A Yes. 9 the last time in your deposition, and I'm sorry, 9 10 I'm trying not to retread old ground, but can you 10 Q And 62 is the internal report, right? 11 tell us what the task force was? 11 A Oh, I'm sorry. I haven't seen 62 yet. 12 A So this is the Talc Interested Party 12 Yes. 13 Task Force, so these are specifically people who 13 Q So one is titled -- the memorandum is 14 have an interest in talc and are willing to pay 14 entitled "Meta-Analysis." Right? 15 for projects as well when required. And these are 15 A Yes. just the member companies, again, with an interest 16 16 Q Okay. And you all paid, at least in part, for this, right? 17 in the topic. 17 Q Okay. And listed on this document are A I believe so, yes. 18 18 19 Johnson & Johnson, Luzenac, American Westminster, Q And if you go to the back, the draft 19 20 paper, the one that was not published, and you go is that --20 21 21 A I don't know. to page 33, it says: "Financial support for this 22 study was provided in part by the Cosmetic Q I don't know that either. 22 23 -- Procter & Gamble Company, Cosmair, 23 Toiletry and Fragrance Association." 24 Colgate Palmolive, Helene Curtis, and then CTFA, A Yes. 24 25 which is PCPC. 25 Q Now --

57 (Pages 600 to 603)

Page 604 Page 606 1 MR. GOLOMB: Wait, Chris, the document 1 A As we've discussed, yes. 2 is not up yet. 2 Q And that reflects -- and if you go back 3 3 to my chart here, my -- my timeline, this reflects BY MR. TISI: 4 4 the concerns that talcum powder products may cause Q If you go to page --5 5 MR. GOLOMB: That's the wrong document. ovarian cancer, and there was an active debate 6 6 MR. TISI: 62, yeah. among scientists. That was the concept we talked 7 Yeah, that's right, go to the very end. 7 about earlier. 8 8 It's the Bates 188. A Yes. 9 BY MR. TISI: 9 Q If you go to page --10 Q And the Acknowledgment section 10 MR. TISI: I'm sorry? 11 acknowledges what I think you told us in your 11 (Counsel conferring.) interrogatories: "The financial support for this 12 12 Q Okay. Let's go back to -- if you go to 13 study is provided in part by the Cosmetic, 13 page 192 of the study, the Discussion section. 14 Toiletry and Fragrance Association, correct? A I'm sorry. Which one? 14 15 15 MR. LOCKE: 192. A Yes. 16 Q Okay. Now, the report actually went 16 THE WITNESS: I know. Which document? 17 through peer review, right, and actually was 17 BY MR. TISI: 18 published? 18 Q The actual published study. 19 A Okay. A It looks that way, yes. 19 20 Q Yeah. And when it was published, did 20 Q The authors -- and these are people who 21 you ask -- did PCPC ask that their name be taken 21 were hired by -- paid for by you all, right? 22 off the acknowledgment? Because they're not on 22 A Again, I'm a little confused because it 23 the acknowledgment of the published paper. 23 says J&J. 24 A I see that J&J is. 24 Q Okay. But J&J was actually the -- you 25 I -- I don't know what happened on that 25 know --Page 605 Page 607 1 funding. 1 A Certainly part of, right, industry. 2 Q Well, let's go to the published paper 2 Q Right. So the discussion says: 3 and see what the published paper says. Okay? 3 "Existing evidence linking talc exposure to an A Mm-hmm. 4 4 increased risk of ovarian cancer cannot be viewed 5 Q The one that actually went through peer 5 as scientifically conclusive based upon the available epidemiological studies." Right? 6 review. Right? 6 7 A Yes. 7 A Mm-hmm. Yes. 8 8 Q Okay. First of all, and this -- so that Q Is it your view that the evidence must 9 the jury understands, this is dated 1995. 9 be conclusive before women are told of the 10 10 potential risk in a cosmetic product? 11 MR. LOCKE: Objection. Beyond the scope 11 Q This is some 10 -- 13 years before 12 the -- before the Citizen's Petition. 12 and to form. 13 A Okay. 13 BY MR. TISI: 14 Q Right? 14 Q You may answer the question. Must the 15 A Yes. 15 evidence be conclusive before women are told of 16 Q And so this is -- it says: "The concern 16 the potential risk? that use of talc or talc" -- this is the first 17 17 MR. LOCKE: Same objection. sentence of the abstract -- "the concern that use THE WITNESS: Yeah, I -- I --18 18 BY MR. TISI: 19 of talc or talc-containing substances in the 19 perineal region of women may subject them to an 20 20 Q You know that the standard is that -- we 21 increased risk of ovarian cancer has become an 21 talked about this early on in the deposition -important issue in the study of ovarian cancer." 22 the standard is warnings should be added when 22 23 Is that -- did I read that correct? 23 there may be a risk, correct? 24 24 A That's what it says, yes. MR. LOCKE: Objection. Beyond the scope 25 Q And that's true, right? 25 and form.

58 (Pages 604 to 607)

Page 608 Page 610 1 BY MR. TISI: 1 says: "However, all the meta-analysis arrive at a 2 Q You're told -- you know that, right? 2 relative risk rate of 1 with a 95 percent 3 MR. LOCKE: Same objection. 3 confidence interval excluding the null." 4 4 That's basically saying that all the BY MR. TISI: 5 Q You actually publish -- PCPC publishes a 5 meta-analysis done as of that time showed an 6 labeling book for its members, correct? 6 increased risk, correct? 7 MR. LOCKE: Objection. 7 MR. LOCKE: Objection. 8 THE WITNESS: The labeling book deals THE WITNESS: Well, that's the 8 meta-analysis. That's not the individual studies. with current labeling requirements. 9 9 10 10 BY MR. TISI: BY MR. TISI: 11 Q Right. And you know that warnings 11 Q The purpose of a meta-analysis is to should be added when there may be a risk, correct? combine studies to increase the power of a study 12 12 MR. LOCKE: Objection. Beyond the scope 13 13 to determine a risk, right? 14 14 MR. LOCKE: Objection. and to form. THE WITNESS: Yeah, that seems like a 15 THE WITNESS: I mean I'm not an 15 16 legal labeling issue that's not anything --16 epidemiologist, but I would say, yes, that's their 17 BY MR. TISI: 17 basic purpose. 18 Q But you were responding to a Citizen's 18 BY MR. TISI: Petition regarding labeling, right? You were 19 19 Q And the last page on page 193, and this is of a 1995 article funded by you all. 20 responding to that? 20 21 A We were responding to the science piece 21 MR. LOCKE: Objection. 22 22 THE WITNESS: Oh, yeah, it's -- I'm not of --Q Right. And I asked you what the sure what happened here. The authors changed, the 23 23 24 standard was because doctor -- Dr. Epstein was 24 things changed, and the -- the acknowledgments 25 asking for a label change. Right? 25 changed. So I -- I don't want to say this was Page 609 Page 611 1 MR. LOCKE: You're asking her what you 1 funded by PCPC. That's not what it says. And 2 asked her? 2 there's definitely a change in authorship here, so 3 BY MR. TISI: 3 things changed. 4 BY MR. TISI: 4 Q No, I -- you know that Dr. Epstein was 5 asking for a label change to add a warning about a 5 Q The last sentence says: "The -- thus, 6 potential risk, right? б the body of knowledge found in the medical 7 A I know that that's what he was asking 7 literature does not unequivocally support the 8 8 hypothesis that talc use puts women at an for, correct. increased risk of ovarian cancer. However, the 9 Q And you responded and opposed that, 9 10 10 results of this meta-analysis do suggest the correct? 11 possibility of an increased ovarian cancer due to MR. LOCKE: Objection. 11 12 THE WITNESS: Based on the science. 12 peritoneal -- perineal talc use." 13 BY MR. TISI: 13 Do you see that? 14 Q Right. And I asked you before, did you 14 A Yes. 15 know the standard, correct? 15 Q And these were the same authors at least that were the people that you all hired to do a 16 A And I think I said I didn't, that that 16 meta-analysis, correct? 17 was a legal --17 Q Okay. And so you responded to the A Well, I think we hired Dr. Gross, but I 18 18 19 petition not knowing what the standard was. don't think we hired Dr. Berg, so that's why I'm 19 20 MR. LOCKE: Objection. 20 saying I'm not sure. THE WITNESS: We responded by offering 21 21 Q And Dr. Berg -- Dr. Berg, I will 22 scientific -- expert epidemiologists' opinion on 22 represent to you, was -- was a doctoral student of 23 what the epidemiology shows. 23 Dr. Gross. And that's made clear in other 24 24 BY MR. TISI: documents. 25 Q Now, at the last sentence here, Dr. Berg 25 A Okay.

59 (Pages 608 to 611)

Page 612 Page 614 Q He was basically given coauthorship, but 1 1 that? 2 it was really Dr. Gross. 2 A Yes. 3 So can you say -- these appear to be the 3 Q And at this time frame, as in others, 4 same. This one is March 17, 1994. This 4 this was an important issue, right? That's why 5 meta-analysis -- published meta-analysis is 1995. 5 you guys were meeting. б One says it's sponsored by J&J, the other one says 6 A That's what we were talking about, yes. 7 7 Q And other than the Berg article which we 8 8 just discussed, are you aware of any industry-Do you agree that this is likely the same study? 9 sponsored epidemiological study or meta-analysis 9 10 that actually looked at the question specifically 10 A I think it looks like it's related, yes. Q Okay. So this is one study that you 11 11 of whether ovarian cancer and talc were related? authored -- that you were involved with. 12 12 A Industry study, no. 13 Let's go through another one. 13 Q Given the importance of the issue, don't MR. LOCKE: Objection. 14 you find that a little odd? 14 15 BY MR. TISI: 15 MR. LOCKE: Objection. 16 Q Let's go back to the task force 16 BY MR. TISI: 17 document. 1994. 17 Q It was discussed, right, should we do a 18 The last page, number 4 under the --18 study? 19 this is under a heading entitled "Future Research 19 A Right. I don't know what the follow-up Needs." Do you see that? was, but, I mean, I guess the question is, is it 20 20 21 A The last page? 21 going to make a difference and is it going to be 22 22 Q If you go to page -criticized for being an industry study? A I see "Future Research Needs." Q Well, if the industry study found what 2.3 23 24 Q Right. And if you go to the last page, 24 everyone else said, then everyone would be on the 25 25 same table, right? They would all -- everyone number 4. Page 613 Page 615 1 1 would all agree. A Okay. 2 Q Okay. Do you see that? 2 MR. LOCKE: Objection. 3 3 BY MR. TISI: Q Well, let me ask you this: Are you 4 Q It says -- I don't know who MNordhauser 4 5 aware that Dr. Wynder did in fact propose a study? is, but that seems to be a person, right? 5 6 A I think it's Mary Ann Nordhauser. 6 A I'm not aware. 7 Q Okay. She pointed out: "The importance 7 Q Do you know at the time you mentioned --8 of considering other research directions in which 8 now doctor -- who is Dr. Wynder? 9 the task force should be involved. Ms. Nordhauser 9 A I don't know. 10 suggested the task force consider sponsoring 10 Q Do you know Dr. Wynder was with the 11 further epidemiological studies. It was noted 11 American Health Foundation? 12 that Dr. Ernst Wynder discussed an outline of such 12 A I guess I do now. 13 a research proposal at the ISRTP symposium. Mike Q You know the American Health Foundation 13 14 Chudkowski agreed to discuss the developments of 14 was the same foundation where Dr. Muscat worked? 15 such a proposal with Dr. Wynder." 15 16 Do you see that? 16 Q Do you know that Dr. Muscat proposed an epidemiology study to J&J to follow up exactly on 17 Yes. 17 Q Okay. And was it important during the 18 this issue in 1994, 1995? 18 1990s for the CTFA and the members of the talc 19 19 A No, I don't know that. I mean, I 20 task force to do research into the area that we've 20 believe that. I just don't know that. 21 21 been discussing, ovarian cancer and talc? (Exhibit No. 63 was marked for 22 A I guess I think it was discussed to see 22 identification.) 23 if -- you know --23 BY MR. TISI: 24 Q Well, she says: "The importance of 24 Q I'm going to show you Exhibit No. 63. 25 considering research directions." Do you see 25 Now, I'll represent to you, because I

                                                              8
       grant application to Johnson & Johnson, but the
                                                                   follow-up --
                                                              9
 9
       actual proposal is attached.
                                                                         MR. TISI: Do you have a copy of that
10
           A Okay.
                                                            10
                                                                   letter?
11
           Q Okay?
                                                            11
                                                                         Okay. Could we take a break for one
                                                            12
                                                                   minute while we get a copy of the letter?
12
           A Yes.
13
           Q
              And you see that this is a proposal from
                                                            13
                                                                         THE VIDEOGRAPHER: The time is 2:06 p.m.
14
       1994?
                                                            14
                                                                   We're going off the record.
                                                            15
                                                                         (Recess.)
15
           A Yes.
                                                                         THE VIDEOGRAPHER: The time is 2:16 p.m.
16
           Q This would have been within six months
                                                            16
17
       of the CTFA Talc Interested Party Task Force --
                                                            17
                                                                   We're back on the record.
18
              MR. DUFFY: Counsel, can you confirm
                                                            18
                                                                   BY MR. TISI:
19
                                                            19
       that what's in these exhibits is a composite
                                                                      Q Doctor, I don't want to belabor the
                                                                   point because I know we've been going a little
20
       exhibit --
                                                            20
21
              MR. TISI: Absolutely. Absolutely. It
                                                            21
                                                                   while, and I've got to turn my time over to other
22
       is two documents. The one is the actual
                                                            22
                                                                   people.
                                                            23
                                                                         But do you know whether or not J&J --
23
       application itself.
                                                            24
24
              MS. FRAZIER: Are there any other copies
                                                                   first of all, the study that you have in front of
25
                                                            25
                                                                   you is a case controlled study.
       of that since --

                                                                                                         Page 619
 1
                                                              1
              MR. TISI: Yeah. Yeah.
                                                                       A Okay.
 2
              MR. DUFFY: This one kind of came apart.
                                                              2
                                                                       Q Do you -- well, do you see it? It's
 3
              MR. TISI: Okay. It was testified to by
                                                              3
                                                                    entitled "Proposal for a Case Controlled Study of
                                                                    Talcum Powder Use in Ovarian Cancer."
 4
       Dr. Muscat the other day, so they refer to the
                                                              4
 5
                                                              5
                                                                          MR. LOCKE: If you go back to page 78 at
       same thing.
 6
              The first -- and just to be clear for
                                                              6
                                                                   the bottom there.

       entitled "Talcum Powder Use in Ovarian Cancer,
                                                              8
                                                                    see it, yes.
 9
       Joshua Muscat, Research Scientist," on behalf of
                                                              9
                                                                    BY MR. TISI:
10
                                                            10
                                                                       Q So there's a study -- this is actually a
       the American Health Foundation.
11
                                                            11
                                                                    study proposal, okay?
              There is actually a letter that goes
12
       along with it as well, and attached is that actual
                                                            12
                                                                       A Yes.
13
       proposal for case controlled study of talcum
                                                            13
                                                                       Q So just so we have the time frame down,
14
       powder use and ovarian cancer.
                                                            14
                                                                    the -- in 1994, you all had a meeting. There was
15
              MR. DUFFY: Thank you.
                                                            15
                                                                    a suggestion that J&J follow up and see whether or
16
              MR. TISI: You're welcome.
                                                            16
                                                                    not an additional study could be done by
17
       BY MR. TISI:
                                                            17
                                                                    Dr. Wynder's group. This is Dr. Wynder's group,
                                                            18
                                                                    the American Health Foundation. They proposed a
18
           Q And I'll represent to you that both of
       these documents are dated 2000 and -- actually,
19
                                                            19
                                                                    study, and the study was a case controlled study.
20

TISI: Q Do you know who Brooke Mossman is? A I have heard the name. She's at Vermont, and I know it, yes. Q University at Vermont? A I think so. Q Do you know that she was involved in funded studies relating to the cellular response
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	group to do it, right, and not have any role in the in the design of the study, no role in the editing of the study, no role no approve approval or non-approval of the text, right? I mean there are times when that's done, right?  MR. LOCKE: Objection.  THE WITNESS: I guess I can't think of anywhere we've done a study like that.  BY MR. TISI:  Q Right. Because you always want to know what the authors are saying about a study you fund before you agree that it gets published, right?  MR. LOCKE: Objection.  THE WITNESS: I mean, in general, yes, if we're funding a study, we want to BY MR. TISI:	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	those. BY MR. TISI: Q Now, other than being aware of them before they were published, was PCPC involved in any way with the review of these articles? MR. LOCKE: Objection. THE WITNESS: They were not. BY MR. TISI: Q Do you know who Brooke Mossman is? A I have heard the name. She's at Vermont, and I know it, yes. Q University at Vermont? A I think so. Q Do you know that she was involved in funded studies relating to the cellular response to to both asbestos and talc?
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	group to do it, right, and not have any role in the in the design of the study, no role in the editing of the study, no role no approve approval or non-approval of the text, right? I mean there are times when that's done, right?  MR. LOCKE: Objection.  THE WITNESS: I guess I can't think of anywhere we've done a study like that.  BY MR. TISI:  Q Right. Because you always want to know what the authors are saying about a study you fund before you agree that it gets published, right?  MR. LOCKE: Objection.  THE WITNESS: I mean, in general, yes, if we're funding a study, we want to BY MR. TISI:  Q So you're unaware of this particular	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	those. BY MR. TISI: Q Now, other than being aware of them before they were published, was PCPC involved in any way with the review of these articles? MR. LOCKE: Objection. THE WITNESS: They were not. BY MR. TISI: Q Do you know who Brooke Mossman is? A I have heard the name. She's at Vermont, and I know it, yes. Q University at Vermont? A I think so. Q Do you know that she was involved in funded studies relating to the cellular response to to both asbestos and talc? A That sounds familiar, yes.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	group to do it, right, and not have any role in the in the design of the study, no role in the editing of the study, no role no approve approval or non-approval of the text, right? I mean there are times when that's done, right?  MR. LOCKE: Objection.  THE WITNESS: I guess I can't think of anywhere we've done a study like that.  BY MR. TISI:  Q Right. Because you always want to know what the authors are saying about a study you fund before you agree that it gets published, right?  MR. LOCKE: Objection.  THE WITNESS: I mean, in general, yes, if we're funding a study, we want to BY MR. TISI:  Q So you're unaware of this particular study and why it was and was not done.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	those. BY MR. TISI: Q Now, other than being aware of them before they were published, was PCPC involved in any way with the review of these articles? MR. LOCKE: Objection. THE WITNESS: They were not. BY MR. TISI: Q Do you know who Brooke Mossman is? A I have heard the name. She's at Vermont, and I know it, yes. Q University at Vermont? A I think so. Q Do you know that she was involved in funded studies relating to the cellular response to to both asbestos and talc? A That sounds familiar, yes. Q Do you know that those studies were
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	group to do it, right, and not have any role in the in the design of the study, no role in the editing of the study, no role no approve approval or non-approval of the text, right? I mean there are times when that's done, right?  MR. LOCKE: Objection.  THE WITNESS: I guess I can't think of anywhere we've done a study like that.  BY MR. TISI:  Q Right. Because you always want to know what the authors are saying about a study you fund before you agree that it gets published, right?  MR. LOCKE: Objection.  THE WITNESS: I mean, in general, yes, if we're funding a study, we want to BY MR. TISI:  Q So you're unaware of this particular study and why it was and was not done.  A Yes. I don't believe I've seen it.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	those. BY MR. TISI: Q Now, other than being aware of them before they were published, was PCPC involved in any way with the review of these articles? MR. LOCKE: Objection. THE WITNESS: They were not. BY MR. TISI: Q Do you know who Brooke Mossman is? A I have heard the name. She's at Vermont, and I know it, yes. Q University at Vermont? A I think so. Q Do you know that she was involved in funded studies relating to the cellular response to to both asbestos and talc? A That sounds familiar, yes. Q Do you know that those studies were funded by IMA North America?
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	group to do it, right, and not have any role in the in the design of the study, no role in the editing of the study, no role no approve approval or non-approval of the text, right? I mean there are times when that's done, right?  MR. LOCKE: Objection.  THE WITNESS: I guess I can't think of anywhere we've done a study like that.  BY MR. TISI:  Q Right. Because you always want to know what the authors are saying about a study you fund before you agree that it gets published, right?  MR. LOCKE: Objection.  THE WITNESS: I mean, in general, yes, if we're funding a study, we want to BY MR. TISI:  Q So you're unaware of this particular study and why it was and was not done.  A Yes. I don't believe I've seen it.  Q Now, I'm going to show you a study that	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	those. BY MR. TISI: Q Now, other than being aware of them before they were published, was PCPC involved in any way with the review of these articles? MR. LOCKE: Objection. THE WITNESS: They were not. BY MR. TISI: Q Do you know who Brooke Mossman is? A I have heard the name. She's at Vermont, and I know it, yes. Q University at Vermont? A I think so. Q Do you know that she was involved in funded studies relating to the cellular response to to both asbestos and talc? A That sounds familiar, yes. Q Do you know that those studies were funded by IMA North America? A No. I mean, I I have probably run
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	group to do it, right, and not have any role in the in the design of the study, no role in the editing of the study, no role no approve approval or non-approval of the text, right? I mean there are times when that's done, right?  MR. LOCKE: Objection.  THE WITNESS: I guess I can't think of anywhere we've done a study like that.  BY MR. TISI:  Q Right. Because you always want to know what the authors are saying about a study you fund before you agree that it gets published, right?  MR. LOCKE: Objection.  THE WITNESS: I mean, in general, yes, if we're funding a study, we want to BY MR. TISI:  Q So you're unaware of this particular study and why it was and was not done.  A Yes. I don't believe I've seen it.  Q Now, I'm going to show you a study that was done by Dr. Huncharek, Exhibit No	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	those. BY MR. TISI: Q Now, other than being aware of them before they were published, was PCPC involved in any way with the review of these articles? MR. LOCKE: Objection. THE WITNESS: They were not. BY MR. TISI: Q Do you know who Brooke Mossman is? A I have heard the name. She's at Vermont, and I know it, yes. Q University at Vermont? A I think so. Q Do you know that she was involved in funded studies relating to the cellular response to to both asbestos and talc? A That sounds familiar, yes. Q Do you know that those studies were funded by IMA North America? A No. I mean, I I have probably run across that. I know they were not funded by us,
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	group to do it, right, and not have any role in the in the design of the study, no role in the editing of the study, no role no approve approval or non-approval of the text, right? I mean there are times when that's done, right?  MR. LOCKE: Objection.  THE WITNESS: I guess I can't think of anywhere we've done a study like that.  BY MR. TISI:  Q Right. Because you always want to know what the authors are saying about a study you fund before you agree that it gets published, right?  MR. LOCKE: Objection.  THE WITNESS: I mean, in general, yes, if we're funding a study, we want to BY MR. TISI:  Q So you're unaware of this particular study and why it was and was not done.  A Yes. I don't believe I've seen it.  Q Now, I'm going to show you a study that was done by Dr. Huncharek, Exhibit No MR. TISI: Which exhibit are we on?	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	those. BY MR. TISI: Q Now, other than being aware of them before they were published, was PCPC involved in any way with the review of these articles? MR. LOCKE: Objection. THE WITNESS: They were not. BY MR. TISI: Q Do you know who Brooke Mossman is? A I have heard the name. She's at Vermont, and I know it, yes. Q University at Vermont? A I think so. Q Do you know that she was involved in funded studies relating to the cellular response to to both asbestos and talc? A That sounds familiar, yes. Q Do you know that those studies were funded by IMA North America? A No. I mean, I I have probably run across that. I know they were not funded by us, but that
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	group to do it, right, and not have any role in the in the design of the study, no role in the editing of the study, no role no approve approval or non-approval of the text, right? I mean there are times when that's done, right?  MR. LOCKE: Objection.  THE WITNESS: I guess I can't think of anywhere we've done a study like that.  BY MR. TISI:  Q Right. Because you always want to know what the authors are saying about a study you fund before you agree that it gets published, right?  MR. LOCKE: Objection.  THE WITNESS: I mean, in general, yes, if we're funding a study, we want to BY MR. TISI:  Q So you're unaware of this particular study and why it was and was not done.  A Yes. I don't believe I've seen it.  Q Now, I'm going to show you a study that was done by Dr. Huncharek, Exhibit No MR. TISI: Which exhibit are we on?  MR. LOCKE: 65.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	those. BY MR. TISI: Q Now, other than being aware of them before they were published, was PCPC involved in any way with the review of these articles? MR. LOCKE: Objection. THE WITNESS: They were not. BY MR. 1	A He may have been asked about it. I'm	1	(Exhibit No. 66 was marked for
2	not sure, but we did not fund any.	2	identification.)
3	Q There was a study that Dr. Mossman	3	BY MR. TISI:
4	proposed. Are you familiar with the Shukla paper?	4	Q First of all, if you go to page 10, it
5	A Not by that name.	5	says actually, hold on a second.
6	Q It's a Mossman it's a published	6	Okay. On page 12, it says: "Around
7	Mossman study.	7	April 1997, CTFA sought the assistance of
8	A Okay.	8	consultant epidemiologists to evaluate a study on
9	Q Are you aware that Dr. Mossman had	9	powder exposure and perineal cancer."
10	proposed a follow-up study that industry declined	10	A I'm sorry, page 12?
11	to fund?	11	·
12			Q Page 12.
		12	A Oh, second paragraph. Okay.
13	Q Have you ever understood why a	13	Q Do you see that?
14	company or what do you understand about that	14	A Yes.
15	study?	15	Q Do you know what study that refers to?
16	A I I am hard-pressed to remember what	16	A April '97. I should know.
17	it was about.	17	Q The only study I found is the Cooke
18	Q Do you understand that she wanted to	18	study. Does that sound familiar?
19	look at different kinds of talc and how it reacted	19	A Oh, yeah. I think so.
20	to ovarian cancer cells?	20	Q Would that have been the Cooke study?
21	A I I just don't remember.	21	A I couldn't tell you off the top what
22	Q Do you know whether or not why PCPC	22	year the Cooke study was, but it would be
23	decided not to fund that study?	23	because I'm not thinking of any other event, I
24	A If that's as I remember, because that's	24	think it would be a single study that
25	how I remembered, is there was one study, and we	25	Q I'm going to show you the Cooke study,
	Page 629		Page 631
1	Page 629 ask our people and if they want to fund, and	1	Page 631 and it's Exhibit No. 67.

(Exhibit No. 67 was marked for identification.)  BY MR. TISI:  Q And ask you whether you believe that
2 3 4 5	ask our people and if they want to fund, and basically it's you know, either they do or they don't, and we would not necessarily know, and nor would nor would the reason be the same among companies.  Q Did you ever discuss with either J&J or	2 3 4 5	and it's Exhibit No. 67.  (Exhibit No. 67 was marked for identification.)  BY MR. TISI:
2 3 4 5 6 7	ask our people and if they want to fund, and basically it's you know, either they do or they don't, and we would not necessarily know, and nor would nor would the reason be the same among companies.  Q Did you ever discuss with either J&J or Imerys why they were not interested in funding	2 3 4 5 6 7	and it's Exhibit No. 67.  (Exhibit No. 67 was marked for identification.)  BY MR. TISI:  Q And ask you whether you believe that that's the case that you asked a consultant to look at.
2 3 4 5 6	ask our people and if they want to fund, and basically it's you know, either they do or they don't, and we would not necessarily know, and nor would nor would the reason be the same among companies.  Q Did you ever discuss with either J&J or Imerys why they were not interested in funding that follow-up study by Dr. Mossman?	2 3 4 5 6	and it's Exhibit No. 67.  (Exhibit No. 67 was marked for identification.)  BY MR. TISI:  Q And ask you whether you believe that that's the case that you asked a consultant to look at.  A So again, I think this was before I was
2 3 4 5 6 7 8	ask our people and if they want to fund, and basically it's you know, either they do or they don't, and we would not necessarily know, and nor would nor would the reason be the same among companies.  Q Did you ever discuss with either J&J or Imerys why they were not interested in funding that follow-up study by Dr. Mossman?  MS. FRAZIER: Object to form.	2 3 4 5 6 7 8	and it's Exhibit No. 67.  (Exhibit No. 67 was marked for identification.)  BY MR. TISI:  Q And ask you whether you believe that that's the case that you asked a consultant to look at.  A So again, I think this was before I was at CTFA, which is why I don't know.
2 3 4 5 6 7 8	ask our people and if they want to fund, and basically it's you know, either they do or they don't, and we would not necessarily know, and nor would nor would the reason be the same among companies.  Q Did you ever discuss with either J&J or Imerys why they were not interested in funding that follow-up study by Dr. Mossman?	2 3 4 5 6 7 8 9	and it's Exhibit No. 67.  (Exhibit No. 67 was marked for identification.)  BY MR. TISI:  Q And ask you whether you believe that that's the case that you asked a consultant to look at.  A So again, I think this was before I was at CTFA, which is why I don't know.  Q Right.
2 3 4 5 6 7 8 9	ask our people and if they want to fund, and basically it's you know, either they do or they don't, and we would not necessarily know, and nor would nor would the reason be the same among companies.  Q Did you ever discuss with either J&J or Imerys why they were not interested in funding that follow-up study by Dr. Mossman?  MS. FRAZIER: Object to form.  THE WITNESS: Not that I recall. BY MR. TISI:	2 3 4 5 6 7 8 9	and it's Exhibit No. 67.  (Exhibit No. 67 was marked for identification.)  BY MR. TISI:  Q And ask you whether you believe that that's the case that you asked a consultant to look at.  A So again, I think this was before I was at CTFA, which is why I don't know.  Q Right.  A But I know we had a couple of individual
2 3 4 5 6 7 8 9 10 11 12	ask our people and if they want to fund, and basically it's you know, either they do or they don't, and we would not necessarily know, and nor would nor would the reason be the same among companies.  Q Did you ever discuss with either J&J or Imerys why they were not interested in funding that follow-up study by Dr. Mossman?  MS. FRAZIER: Object to form.  THE WITNESS: Not that I recall.  BY MR. TISI:  Q Now, let's go to I'd like to go to	2 3 4 5 6 7 8 9 10 11	and it's Exhibit No. 67.  (Exhibit No. 67 was marked for identification.)  BY MR. TISI:  Q And ask you whether you believe that that's the case that you asked a consultant to look at.  A So again, I think this was before I was at CTFA, which is why I don't know.  Q Right.  A But I know we had a couple of individual studies assessed, so timingwise, I guess this
2 3 4 5 6 7 8 9 10 11 12 13	ask our people and if they want to fund, and basically it's you know, either they do or they don't, and we would not necessarily know, and nor would nor would the reason be the same among companies.  Q Did you ever discuss with either J&J or Imerys why they were not interested in funding that follow-up study by Dr. Mossman?  MS. FRAZIER: Object to form.  THE WITNESS: Not that I recall.  BY MR. TISI:  Q Now, let's go to I'd like to go to the answers to interrogatories that were produced,	2 3 4 5 6 7 8 9 10 11 12	and it's Exhibit No. 67.  (Exhibit No. 67 was marked for identification.)  BY MR. TISI:  Q And ask you whether you believe that that's the case that you asked a consultant to look at.  A So again, I think this was before I was at CTFA, which is why I don't know.  Q Right.  A But I know we had a couple of individual studies assessed, so timingwise, I guess this makes sense. So I would
2 3 4 5 6 7 8 9 10 11 12 13 14	ask our people and if they want to fund, and basically it's you know, either they do or they don't, and we would not necessarily know, and nor would nor would the reason be the same among companies.  Q Did you ever discuss with either J&J or Imerys why they were not interested in funding that follow-up study by Dr. Mossman?  MS. FRAZIER: Object to form.  THE WITNESS: Not that I recall.  BY MR. TISI:  Q Now, let's go to I'd like to go to the answers to interrogatories that were produced, and I'm on my last page here.	2 3 4 5 6 7 8 9 10 11 12 13	and it's Exhibit No. 67.  (Exhibit No. 67 was marked for identification.)  BY MR. TISI:  Q And ask you whether you believe that that's the case that you asked a consultant to look at.  A So again, I think this was before I was at CTFA, which is why I don't know.  Q Right.  A But I know we had a couple of individual studies assessed, so timingwise, I guess this makes sense. So I would  Q This is my only opportunity
2 3 4 5 6 7 8 9 10 11 12 13 14 15	ask our people and if they want to fund, and basically it's you know, either they do or they don't, and we would not necessarily know, and nor would nor would the reason be the same among companies.  Q Did you ever discuss with either J&J or Imerys why they were not interested in funding that follow-up study by Dr. Mossman?  MS. FRAZIER: Object to form.  THE WITNESS: Not that I recall.  BY MR. TISI:  Q Now, let's go to I'd like to go to the answers to interrogatories that were produced, and I'm on my last page here.  Your counsel provided to us a set of	2 3 4 5 6 7 8 9 10 11 12 13 14 15	and it's Exhibit No. 67.  (Exhibit No. 67 was marked for identification.)  BY MR. TISI:  Q And ask you whether you believe that that's the case that you asked a consultant to look at.  A So again, I think this was before I was at CTFA, which is why I don't know.  Q Right.  A But I know we had a couple of individual studies assessed, so timingwise, I guess this makes sense. So I would  Q This is my only opportunity  A That seems plausible.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	ask our people and if they want to fund, and basically it's you know, either they do or they don't, and we would not necessarily know, and nor would nor would the reason be the same among companies.  Q Did you ever discuss with either J&J or Imerys why they were not interested in funding that follow-up study by Dr. Mossman?  MS. FRAZIER: Object to form.  THE WITNESS: Not that I recall.  BY MR. TISI:  Q Now, let's go to I'd like to go to the answers to interrogatories that were produced, and I'm on my last page here.  Your counsel provided to us a set of a second set of supplemental interrogatories on	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	and it's Exhibit No. 67.  (Exhibit No. 67 was marked for identification.)  BY MR. TISI:  Q And ask you whether you believe that that's the case that you asked a consultant to look at.  A So again, I think this was before I was at CTFA, which is why I don't know.  Q Right.  A But I know we had a couple of individual studies assessed, so timingwise, I guess this makes sense. So I would  Q This is my only opportunity  A That seems plausible.  Q It's my only opportunity to really ask
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	ask our people and if they want to fund, and basically it's you know, either they do or they don't, and we would not necessarily know, and nor would nor would the reason be the same among companies.  Q Did you ever discuss with either J&J or Imerys why they were not interested in funding that follow-up study by Dr. Mossman?  MS. FRAZIER: Object to form.  THE WITNESS: Not that I recall.  BY MR. TISI:  Q Now, let's go to I'd like to go to the answers to interrogatories that were produced, and I'm on my last page here.  Your counsel provided to us a set of a second set of supplemental interrogatories on Friday.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	and it's Exhibit No. 67.  (Exhibit No. 67 was marked for identification.)  BY MR. TISI:  Q And ask you whether you believe that that's the case that you asked a consultant to look at.  A So again, I think this was before I was at CTFA, which is why I don't know.  Q Right.  A But I know we had a couple of individual studies assessed, so timingwise, I guess this makes sense. So I would  Q This is my only opportunity  A That seems plausible.  Q It's my only opportunity to really ask questions of PCPC about this.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	ask our people and if they want to fund, and basically it's you know, either they do or they don't, and we would not necessarily know, and nor would nor would the reason be the same among companies.  Q Did you ever discuss with either J&J or Imerys why they were not interested in funding that follow-up study by Dr. Mossman?  MS. FRAZIER: Object to form.  THE WITNESS: Not that I recall.  BY MR. TISI:  Q Now, let's go to I'd like to go to the answers to interrogatories that were produced, and I'm on my last page here.  Your counsel provided to us a set of a second set of supplemental interrogatories on Friday.  A Okay.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	and it's Exhibit No. 67.  (Exhibit No. 67 was marked for identification.)  BY MR. TISI:  Q And ask you whether you believe that that's the case that you asked a consultant to look at.  A So again, I think this was before I was at CTFA, which is why I don't know.  Q Right.  A But I know we had a couple of individual studies assessed, so timingwise, I guess this makes sense. So I would  Q This is my only opportunity  A That seems plausible.  Q It's my only opportunity to really ask questions of PCPC about this.  Do you believe that this is the study?
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	ask our people and if they want to fund, and basically it's you know, either they do or they don't, and we would not necessarily know, and nor would nor would the reason be the same among companies.  Q Did you ever discuss with either J&J or Imerys why they were not interested in funding that follow-up study by Dr. Mossman?  MS. FRAZIER: Object to form.  THE WITNESS: Not that I recall.  BY MR. LOCKE: Just for the record, we do

64 (Pages 628 to 631)

Page 632 Page 634 1 wasn't helpful, candidly, but I can go back and 1 MR. LOCKE: We will see. Okay. 2 figure it out. 2 BY MR. TISI: 3 3 BY MR. TISI: Q Okay. One last couple of questions, and 4 Q It sought the assistance of consulting 4 then I'm going to kind of be done with it. 5 5 epidemiologists to evaluate the article. Do you I asked you whether or not the industry б know which epidemiologists they were? 6 or CTFA or individually the industry members had 7 7 A I don't. done an epidemiology study studying ovarian cancer 8 8 and talc, and you had indicated that you were Q Do you know whether it was Dr. Muscat? 9 9 A I don't think so. unaware of any, correct? Q Do you know that Dr. Muscat wrote a 10 10 A That's correct. 11 letter to the editor regarding the Cooke paper? 11 Q Are you aware of any study in which the A No, I don't -- I don't think I knew company did any toxicology studies on animals and 12 12 13 that. I -- I wasn't aware -- again, I wasn't 13 ovarian cancer? 14 14 here, so --A The -- through CTFA, the -- it was the 15 Q I understand. I'm asking you with your monkey study was -- I guess two monkey studies or 15 16 hat on as PCPC. 16 one -- one pre-study, one study on translocation. 17 17 A No, totally agree. I just -- I'm just Q Okay. But none looking at cellular --18 saying I wasn't aware that we used Dr. Muscat 18 whether or not talc or any talc constituent causes 19 before 2000. cellular changes in ovarian cancer cells in 19 20 Q Okay. I'm going to show you -- I'm 20 animals? 21 going to put this -- and we will get an exhibit. 21 A I can't think of anything. 22 22 But here is a letter to the editor on Q Okay. And that would be something that 23 2.3 certainly could be done, right? the --24 MR. TISI: Can you put it up? 24 A I mean something --25 (Counsel conferring.) 25 MR. LOCKE: Objection. Page 635 Page 633 1 BY MR. TISI: 1 THE WITNESS: Yeah, something could be 2 Q I'm going to put it up on the screen and 2 done, but you'd have to -- I mean, one would need 3 we'll just have to substitute it. 3 to think about that further as to what could be 4 And this will be Exhibit No. 68. 4 done, if it would make sense. If it would, you 5 (Exhibit No. 68 was marked for 5 know, really shed any light on --6 identification.) 6 BY MR. TISI: 7 BY MR. TISI: 7 Q Well, I mean, without being facetious, 8 Q And here is a letter to the editor in 8 you all had about 40 years to think about it. 9 1997 from Dr. Muscat and Dr. Wynder from the 9 The question is, did you ever talk with 10 American Health Foundation. 10 amongst the members and say, Maybe we ought to do 11 Do you see that on the screen? 11 an animal study seeing whether or not talcum 12 A Sort of, yes. 12 powder products or any constituent of those products cause cellular changes in ovaries of any 13 Q I'm not going to ask you to comment on 13 14 14 particular animal? it. 15 A Right. 15 MR. LOCKE: Objection. 16 Q I'm asking you do you believe that --16 THE WITNESS: I -- I'm not sure there that -- I'm trying to understand. 17 wasn't something done. Not by us, but -- no, we 17 Would Dr. Muscat and the American Health 18 didn't -- we didn't do anything. 18 19 Foundation have been the epidemiologists with whom 19 BY MR. TISI: 20 you likely consulted to critique the Cooke paper? 20 Q Okay. Any -- there was a discussion in 21 21 A I guess I just would have to say that's one of the -- in the e-mail that Mr. Glenn sent 22 possible. 22 you in 2005 asking whether or not CTFA would do a 23 MR. TISI: Okay. Counsel, I'm going to 23 dose-response study, because that was one of the 24 ask you, on behalf of PCPC, if you could clarify 24 Bradford Hill criteria that you all thought didn't 25 that for us, if you don't mind. 25 -- didn't support causation, and asked whether you

65 (Pages 632 to 635)

Page 636 Page 638 1 would fund a study by Rothman or something that 1 Q That -- that report that was done by 2 could be published on dose-response. 2 Dr. Rothman and Pastides and Samet was never 3 Did you all discuss that? 3 submitted to a journal for peer review, was it? 4 MR. LOCKE: Objection. 4 MR. LOCKE: Just to clarify, you're THE WITNESS: We had Dr. Rothman's and 5 5 talking about the 2000 NTP? б Dr. Samet's and Dr. Pastides' paper. 6 MR. TISI: Correct. 7 BY MR. TISI: 7 THE WITNESS: Correct. It was submitted 8 8 to NTP. Q From 2000? 9 A His assessment. And we -- right, he --9 BY MR. TISI: 10 he did not propose reasonable terms that -- for us 10 Q But it was never submitted for 11 to take that forward. 11 publication in any peer-reviewed journal. Q Okay. Could you explain that a little 12 12 A That's correct. 13 more, because I'm not really sure --13 Q Okay. And you declined to support 14 A He wanted to charge such an incredible that -- that submission for cost reasons, correct? 14 amount, it was far out of the ballpark of being A Only because it was very unreasonable. 15 15 16 reasonable. 16 Q Okay. Did you ever propose to 17 Q Okay. Well, I -- I'm still not 17 anybody -- did anyone ever propose to PCPC or 18 understanding. Did he propose to do a follow-up 18 anybody else that a dose-response study actually study to look at dose-response? 19 be undertaken? 19 20 A No. No, it wasn't -- it wasn't that. 20 A I think that was talked about, and I 21 He was proposing to turn his -- the submission 21 think there was concern that it was something that 22 that he was -- coauthored into a publication. 22 had been done by somebody else, and should we be Q Okay. And how much did he charge -- did doing that. And again, when I say the cost was 23 23 24 he want to charge? 24 high, it was just well out of the bounds of what 25 A \$100,000. 25 you would expect. I mean it wasn't even close. Page 637 Page 639 1 Q And you all decided thanks but no 1 Q Well, let me ask you this, and I will 2 thanks? 2 represent to you -- and I don't have a copy of it 3 A That's not a reasonable number. 3 right here. Maybe I do. This is Exhibit No. 69. 4 Q Okay. And then in 2005, Luzenac came 4 5 5 back to you and said, you know, We really think (Exhibit No. 69 was marked for 6 it's important to publish a study on dose-6 identification.) 7 response. Would you consider it? 7 BY MR. TISI: 8 And that was -- we could pull it out, 8 Q I will represent to you in 2009, 9 but that was the e-mail we talked about Huncharek 9 Drs. Huncharek and Muscat proposed all kinds of 10 and Muscat. Do you remember that? 10 studies that could be done to further eluciate --11 A Yes. elucidate the issue. Smoking and ovarian risks, 11 12 Q Did you go back to the well and say, you 12 hysterectomy and tubal ligation, completion and 13 know, Maybe you ought to publish it and do a publication of Rothman's dose-response analysis, 13 14 published study on dose-response? 14 et cetera, and then they subsequently propose their own dose-response study. 15 MR. LOCKE: Objection. 15 THE WITNESS: No. Again, we had the 16 16 Do you know whether any of those were assessment done, but we -- no, we did not go brought -- any of these proposals were brought to 17 17 18 forward to have that made into a publication. the PCPC? 18 19 BY MR. TISI: 19 A I'm not aware that they were. Q That publication was never subject to 20 Q Okay. Do you currently have any studies 20 21 that you are -- have either considered -- well, peer review, was it? 21 22 A No. I mean it was -- it was a --22 let me ask you this: Other than the ones we've discussed, can you think of any study that was 23 Q I'm sorry. Let me rephrase the 23 proposed to the PCPC or by the PCPC relating to 24 24 question. 25 A Yeah. 25 the -- any issue relating to ovarian cancer and

66 (Pages 636 to 639)

	Page 640		Page 642
1	talc?	1	A We didn't do we didn't do one. I
2	A I'm sorry, what was the first part of	2	mean, there wasn't I guess it wasn't thought it
3	your question?	3	would help or would be seen favorably coming from
4	Q Do you know of any study that was either	4	the industry or
5	proposed to the PCPC or by the PCPC relating to	5	Q Okay. Any studies relating to the
6	any issue regarding talcum powder products and	6	purity of talc from potential carcinogens,
7	ovarian cancer?	7	including asbestos, did you ever sponsor
8	A I mean, I guess the monkey study, and	8	discuss any studies about that?
9	then	9	A I mean, I think that goes back to when
10	Q No, that wasn't done. That was	10	the specification was being put in place and all
11	proposed.	11	the testing was done, and then from then on, it
12	A Oh, that wasn't done.	12	was an ongoing work that was done by the industry,
13	Q Yeah.	13	by the individual companies to
14	A I think not a maybe not a hard core	14	Q No, I you're thinking of something
15	well, the ones you've talked about, I mean the	15	I'm not talking about testing. I'm talking about
16	Mossman. But again, I'm not sure there's any that	16	any publications done to validate and study
17	came to proposal. I mean, I guess it's the things	17	whether or not to test it was effective in
18	we're talking about now, right?	18	removing potential carcinogens, including
19	Q Well, I'm asking if there's anything	19	asbestos?
20	else.	20	A Any publication?
21	A Right.	21	Q Yeah.
22	Q I mean, I'm trying to understand what	22	A I'm not
23	you know. Right?	23	Q Or studies.
24	·	24	A sure what you mean by publication.
25	So so are there I've tried to pull out some things that	25	Q Or studies. Surveys, studies, anything
23		23	
	Page 641		Page 643
1	A Right.	1	like that.
2	Q I could see from the records.	2	A I think that we relied on
2	<ul><li>Q I could see from the records.</li><li>A Right.</li></ul>	2	A I think that we relied on Q The tests themselves.

THE VIDEOGRAPHER: The time is 2:51 p.m. We're back on the record. CROSS-EXAMINATION BY MR. GOLOMB: Q Good afternoon, Doctor. I'm Richard Golomb. We met twice before. A Yes. Q I'm going to start where Mr. Tisi left off, and I'm going to try not to repeat repeat anything that he did, but I do want to clarify
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	Q I could see from the records. A Right. Q But I didn't live your life A Right. Q so I don't know what what you know. A Yeah. Q So the question I'm asking you is, do you know whether or not, other than the studies we've talked about today, are there any other studies you can think that let's take them one at a time that were proposed to the PCPC to do that would investigate issues relating to ovarian cancer and talc? A I would say what I'm aware of is the group talked about kind of a brainstorming session. So not a proposal, not a fleshed-out proposal, but is there something we can do. Q And what kind of studies were were raised?	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	A I think that we relied on Q The tests themselves. A Right, that the companies were carrying out ongoing. MR. TISI: All right. If you want to take a break, I think I'm done. THE VIDEOGRAPHER: The time is 2:44 p.m. We're going off the record. (Recess.) THE VIDEOGRAPHER: The time is 2:51 p.m. We're back on the record. CROSS-EXAMINATION BY MR. GOLOMB: Q Good afternoon, Doctor. I'm Richard Golomb. We met twice before. A Yes. Q I'm going to start where Mr. Tisi left off, and I'm going to try not to repeat repeat anything that he did, but I do want to clarify some things of where he left off.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	Q I could see from the records. A Right. Q But I didn't live your life A Right. Q so I don't know what what you know. A Yeah. Q So the question I'm asking you is, do you know whether or not, other than the studies we've talked about today, are there any other studies you can think that let's take them one at a time that were proposed to the PCPC to do that would investigate issues relating to ovarian cancer and talc? A I would say what I'm aware of is the group talked about kind of a brainstorming session. So not a proposal, not a fleshed-out proposal, but is there something we can do. Q And what kind of studies were were raised? A I mean, I think was there epidemiology	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	A I think that we relied on Q The tests themselves. A Right, that the companies were carrying out ongoing. MR. TISI: All right. If you want to take a break, I think I'm done. THE VIDEOGRAPHER: The time is 2:44 p.m. We're going off the record. (Recess.) THE VIDEOGRAPHER: The time is 2:51 p.m. We're back on the record. CROSS-EXAMINATION BY MR. GOLOMB: Q Good afternoon, Doctor. I'm Richard Golomb. We met twice before. A Yes. Q I'm going to start where Mr. Tisi left off, and I'm going to try not to repeat repeat anything that he did, but I do want to clarify some things of where he left off. So the Rothman proposal was rejected, as
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	Q I could see from the records. A Right. Q But I didn't live your life A Right. Q so I don't know what what you know. A Yeah. Q So the question I'm asking you is, do you know whether or not, other than the studies we've talked about today, are there any other studies you can think that let's take them one at a time that were proposed to the PCPC to do that would investigate issues relating to ovarian cancer and talc? A I would say what I'm aware of is the group talked about kind of a brainstorming session. So not a proposal, not a fleshed-out proposal, but is there something we can do. Q And what kind of studies were were raised? A I mean, I think was there epidemiology work that we could do that that would help,	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	A I think that we relied on Q The tests themselves. A Right, that the companies were carrying out ongoing. MR. TISI: All right. If you want to take a break, I think I'm done. THE VIDEOGRAPHER: The time is 2:44 p.m. We're going off the record. (Recess.) THE VIDEOGRAPHER: The time is 2:51 p.m. We're back on the record. CROSS-EXAMINATION BY MR. GOLOMB: Q Good afternoon, Doctor. I'm Richard Golomb. We met twice before. A Yes. Q I'm going to start where Mr. Tisi left off, and I'm going to try not to repeat repeat anything that he did, but I do want to clarify some things of where he left off. So the Rothman proposal was rejected, as you said, because of the cost of that study,
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	Q I could see from the records. A Right. Q But I didn't live your life A Right. Q so I don't know what what you know. A Yeah. Q So the question I'm asking you is, do you know whether or not, other than the studies we've talked about today, are there any other studies you can think that let's take them one at a time that were proposed to the PCPC to do that would investigate issues relating to ovarian cancer and talc? A I would say what I'm aware of is the group talked about kind of a brainstorming session. So not a proposal, not a fleshed-out proposal, but is there something we can do. Q And what kind of studies were were raised? A I mean, I think was there epidemiology	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	A I think that we relied on Q The tests themselves. A Right, that the companies were carrying out ongoing. MR. TISI: All right. If you want to take a break, I think I'm done. THE VIDEOGRAPHER: The time is 2:44 p.m. We're going off the record. (Recess.) THE VIDEOGRAPHER: The time is 2:51 p.m. We're back on the record. CROSS-EXAMINATION BY MR. GOLOMB: Q Good afternoon, Doctor. I'm Richard Golomb. We met twice before. A Yes. Q I'm going to start where Mr. Tisi left off, and I'm going to try not to repeat repeat anything that he did, but I do want to clarify some things of where he left off. So the Rothman proposal was rejected, as

67 (Pages 640 to 643)

	Page 644		Page 646
1	I think we had gone to them, and they just made it	1	learn why it was that one or more of your members
2	clear that it was going to be very, very expensive	2	rejected the Wynder/Muscat study?
3	if we wanted so we didn't carry it as far as to	3	A No.
4	a proposal.	4	Q All right. Now, in in addition to
5	Q Okay. You said in response to	5	Rothman and in addition to Wynder and in addition
6	Mr. Tisi's question that it was approximately	6	to Muscat, there's a Dr. Wehner, correct, or
7	\$100,000. Where did you get that number if not	7	Wehner?
8	from a proposal?	8	A Wehner, yes.
9	A I I just just kind of a verbal.	9	Q And that's spelled W-E-H-N-E-R?
10	Q From who?	10	A Correct.
11	A I think J&J actually went back and asked	11	Q All right. And the Wynder/Muscat
12	him and and got a verbal on it.	12	proposal was sometime in the early to mid-'90s, is
13	Q When and when was that?	13	that your understanding?
14	A It was after the NTP meeting.	14	A Whatever it was that I just saw. As I
15	Q Okay. And were you with with PCPC at	15	say, we never we PCPC didn't see it, so I
16	that time?	16	would rather look at what it was than try to go by
17	A Yes.	17	memory.
18	Q All right. So that was shortly after	18	Q Okay. Well, let me ask you this: You
19	you went onboard with PCPC?	19	have and I've asked you before about
20	A No, I started no, that was in 2000	20	Dr. Wehner, and you've reviewed some of the
21	or probably 2000 I'm sure it was 2001.	21	documents from him as well, correct?
22	Q Okay.	22	A Yes.
23	A I started PCPC in 1997.	23	Q And those documents begin in the early
24	Q All right. And the Wynder/Muscat	24	to mid-1990s, correct?
25	proposal, why was that rejected?	25	A Dr. Wehner did the study at Battelle, so
	Page 645		D (40

A letter, it was a piece of paper that was that came from Dr. Wehner to somebody at the CFTA, do you recall that?

68 (Pages 644 to 647)

Page 648 Page 650 1 A I mean, we hired him, so we had 1 case controlled study? 2 proposals, I guess. So, yes, documents. 2 A Maybe vaguely. 3 Q Did -- it's really -- it's not a trick 3 Q Okay. And do you recall -- does it help 4 question. I'm just trying to understand that 4 refresh your recollection that in that letter 5 you -- you in fact saw letters from Dr. Wehner to 5 dated in 1994, that in addition to recommending 6 the CFTA outlining what it is that he was 6 the study, Dr. Wehner put some parameters on it 7 proposing that be done, correct? 7 and said it would be easy to do and that you could 8 A I can think of at least one, yes. 8 get the results back within six months? 9 9 Q Okay. And included in those letters A I think that sounds vaguely familiar, were also comments from Dr. Wehner about comments 10 10 but I don't remember the details of what -- what 11 that the CFTA -- that Luzenac at that time, the 11 he was proposing. 12 12 predecessor of Imerys, some of the things that Q And that study was never done, correct? 13 they were going to say publicly about the defense 13 A Again, I would really feel better seeing 14 of talc and ovarian cancer, correct? Do you what it is, so that -- but a study by doctor -- a 14 15 recall those? 15 case controlled study by Dr. Wehner was never 16 A I'm not sure what you mean. I'm --16 17 Q Okay. Do you recall in one of those 17 Q Right. And so -- and a case controlled 18 letters that Dr. Wehner, in addition to 18 study by Dr. Wynder or Dr. Muscat was never done, 19 Dr. Rothman, in addition to Dr. Wynder, in 19 20 addition to Dr. Muscat, that Dr. Wehner also 20 A Again, PCPC was not even aware of that 21 recommended that the CFTA and J&J and other 21 proposal. 22 members of the CFTA at that time also conduct 22 Q Okay. Isn't it true that none of these 23 23 studies were done because PCPC and its members their own study? 24 A I'm not recalling specifically which 24 just didn't want to know the results? 25 document you're talking about. 25 MR. LOCKE: Objection. Page 649 Page 651 1 Q Okay. Do you -- as you sit here today, 1 THE WITNESS: No. I mean, we take the 2 do you recall that -- whether or not it was in a 2 direction of our members, and the members' reasons 3 document or not, do you recall that Dr. Wehner 3 for not funding would -- I mean, you would have to 4 made a recommendation to the CFTA to do its own 4 ask them. 5 study? 5 BY MR. GOLOMB: 6 A I'm not recalling that right now. 6 Q Okay. So sitting here today, you don't 7 Q And do you recall that in that letter 7 know why it is that Rothman, Wynder, Muscat and 8 back in 1994 that Dr. Wehner also told the CFTA 8 Wehner were all rejected, their proposals. Is 9 that it would be easy to do and that the results 9 that what you're telling us? 10 would be -- would come back within six months? Do 10 MR. LOCKE: Objection. 11 you recall that? Does that help refresh your 11 THE WITNESS: I think the only thing I 12 recollection? 12 could say would be the Rothman one, because that's 13 A Can you -- can you show me the document, 13 one thing we looked at, and we knew that -- again, because I'm not sure what study you're talking 14 14 it's not all costs, but we were hoping for just a 15 about. 15 reasonable, normal cost, and that I think -- I'm 16 Q Okay. Do --16 sure we would have gone ahead, but it was in a A Can you tell me what kind of study 17 17 ballpark that was just not rational. 18 BY MR. GOLOMB: 18 he's -- he's --19 Q Do you recall Dr. Wehner recommending 19 Q Okay. And that ballpark was \$100,000? 20 any kind of study? 20 MR. LOCKE: Objection. 21 THE WITNESS: That -- that's my 21 A Well, I mean, he did a study for us, and 22 he did various assessments of the data, but I 22 recollection, yes. 23 think you're talking about something real 23 BY MR. GOLOMB: 24 24 Q All right. And you are aware, are you specific, and I --25 Q Do you recall Dr. Wehner recommending a 25 not, that -- that before that decision was made,

69 (Pages 648 to 651)

Page 652 Page 654 Citizen Petition. 1 that Dr. Cramer had published on the association 1 2 between talc and ovarian cancer, correct? 2 Q Which one? 3 A In 1982, yes. 3 A The 2008, so the 2009 response. 4 Q Right. He also published in 1992. 4 Q So as far as you know, Dr. Huncharek did 5 A I know he published -- he was a coauthor 5 not do any work for PCPC before 2008? 6 on the Gertig paper. 6 A I'm just trying to think and make sure 7 Q Right. And in that paper, in a footnote 7 I'm not skipping anything. I think that's 8 8 in that paper he talks about the -- the numbers of correct. 9 women who died from ovarian cancer. Do you recall 9 Q Okay. And how was it that Dr. Huncharek 10 that? 10 was retained by PCPC or one of its members? 11 A I do not. 11 A Again, it was --Q All right. Tell me if this sounds MR. LOCKE: Objection. 12 12 13 familiar: 22,000 women a year had ovarian cancer. 13 THE WITNESS: -- J&J that reached out to Does that sound familiar? 14 14 him first. And they were familiar with him from 15 A That sounds like what I heard this 15 various work. 16 16 BY MR. GOLOMB: morning too. 17 Q Okay. And 14,000 women a year die from 17 Q Who was it at J&J? 18 ovarian cancer. Does that sound familiar? 18 A Who did I talk to at J&J at the time? I 19 19 A That sounds about a number I would don't remember. expect from the --20 20 Q Okay. So in the -- in the deposition 21 Q Okay. And in Dr. Cramer's paper in 21 notice -- and I hate to tell you we're still on 22 1992, he concludes that 10 percent of those women 22 topic 1, there's only 17 more to go -- but it die from a -- from talc and ovarian cancer. 23 refers to the Weinberg Group. Do you know who the 23 24 MR. LOCKE: Object --24 Weinberg Group is? 25 BY MR. GOLOMB: 25 A Yes. Page 653 Page 655 1 Q Do you recall that in the paper? 1 Q And who is the Weinberg Group? 2 MR. LOCKE: Objection. Mischaracterizes 2 A Weinberg Group is a consulting group, 3 3 and we hired them at the time of the NTP report to the paper. 4 BY MR. GOLOMB: 4 pull together a binder, organize all the 5 5 information, and then reach out to consulting Q Do you recall that? 6 A I -- I recall something along those 6 epidemiologists. 7 lines. It doesn't mean we agreed with that, 7 Q All right. And that was in 1999, 2000? 8 8 though. A It was in 2000. 9 9 Q All right. And was -- did anybody from Q No, I understand. But that's -- that 10 is what was reported in 1992 before the decision 10 the Weinberg Group talk to Dr. Huncharek at that time, do you know? 11 was made not to do a study that was recommended 11 12 by Dr. Rothman, Dr. Wynder, Dr. Muscat and 12 A Not that I'm aware of. 13 Dr. Wehner? 13 Q Who did they talk to? 14 14 A The people that were hired through the MR. LOCKE: Objection. 15 THE WITNESS: I mean, I -- if that's 15 Weinberg Group were Drs. Rothman, Pastides, and 16 what was said in the paper, again, I don't -- I 16 Samet, Dr. Samuel Shapiro, and Dr. Muscat. 17 would have to look back, and we didn't agree with 17 Q All right. And they are -- some or all of them were the ones who then wrote the report 18 18 19 BY MR. GOLOMB: 19 that was then submitted to the NTP? 20 20 Q All right. So let me ask you about A There were three separate reports, and, 21 Dr. Huncharek, and I'm not going to go through the 21 yes, those are the authors. Three of them on one 22 study again. Mr. Tisi did that well. 22 and then individuals from Muscat and Shapiro. 23 When -- when did PCPC first retain 23 Q All right. And then somebody actually 24 Dr. Huncharek for any reason? 24 made the report to the NTP, correct? 25 A I believe it was for the answer to the 25 A Correct.

70 (Pages 652 to 655)

Page 656 Page 658 1 MR. LOCKE: Objection. This material 1 BY MR. GOLOMB: 2 was covered at length by Mr. Meadows. These 2 Q Okay. That was an answer? 3 questions have been asked and answered. 3 A Yeah, I think they work on our website. 4 MR. GOLOMB: I don't -- I'm not sure if 4 I think they work on putting messages together, 5 5 and they work with our Public Affairs people. that's true or not, but I -- I don't -- I only 6 have a couple of minutes on this, so it's not 6 Q Well, my question was who is 7 going to take much time. 7 Burson-Marsteller? 8 THE WITNESS: Dr. Rothman made a 8 A It's a company. 9 presentation on -- on that that there -- the 9 Q It's a company. All right. And is that 10 something you learned in your preparation for 10 report that the three of them put together, the 11 review that the three of them put together. 11 today's deposition? A I had heard of them, the name before. 12 BY MR. GOLOMB: 12 13 Q Okay. And it was -- you're saying --13 Q All right. Who is Nichols-Dezenhall? 14 A So Dr. Pastides, not Dr. Rothman. A Nichols-Dezenhall is a public affairs 14 15 Q Okay. It was not Dr. Rothman, correct? 15 company that did work for CTFA back some many A That's correct, it was Dr. Pastides. 16 16 years ago. I'm not sure that we've used them at 17 17 Q In fact, you recall in your review of all in recent years. They did a couple of focus groups around the time of the NTP report on talc. 18 the documents that Dr. Rothman was kind of upset 18 19 that he wasn't able to make the presentation? Do 19 We use them I know for other things. 20 Q When did you learn about the focus 20 you recall that? 21 A Not really. 21 groups? 22 Q Okay. Burson-Marsteller, who is that? 22 A In my preparation for this deposition. A I think they're a -- I think they do 23 Q Okay. Because you recall -- I was the 23 24 work for PCPC on our website or on our -- perhaps 24 one who asked you about Nichols-Dezenhall before, 25 on cosmeticsinfo.org. I think --25 do you remember that? Page 657 Page 659 1 Q I'm sorry? 1 MR. LOCKE: When you say "before," what 2 A Perhaps on cosmeticsinfo.org. 2 do you mean? 3 Q Who -- who are they? 3 THE WITNESS: Yeah. A I think they're people that help prepare 4 4 BY MR. GOLOMB: 5 information, and they work with our Public Affairs 5 Q In your prior deposition in July of 6 department. 6 2018. 7 7 Q Okay. A I -- I couldn't recall who it was, but I 8 A I think. 8 do remember being asked about that, and I gave an 9 Q And so you're -- you're looking like you 9 answer that was not quite accurate, and that's why 10 don't know too much about them. 10 I made sure I was clarified on that after the 11 A I don't know too much about them. 11 12 Q All right. Did you -- you reviewed 12 Q All right. So did you review your -the -- the notice of deposition before you your deposition transcript from 2018 to help 13 13 14 testified? 14 prepare you today? 15 A Yes. 15 A I -- I read over it to see if there were 16 Q And so you know under 1(f), it 16 any things that I was confused about and made sure specifically says that we're going to ask 17 17 I had answers -- my answers correct. questions about Burson-Marsteller? 18 Q And I deposed you in -- I think it was 18 19 2016 as well, correct? A Yes. 19 20 20 Q Okay. So did you prepare yourself to A That's correct. 21 21 answer questions about Burson-Marsteller? Q Did you review that in preparation for 22 MR. LOCKE: Why don't you ask her a 22 your deposition today? 23 question about them. 23 A Not today, no. 24 24 Q I also after your deposition in July of MR. GOLOMB: Well, I did. 25 MR. LOCKE: And she answered. 25 2018 and before today deposed Mr. Pollack. You

71 (Pages 656 to 659)

	Page 660		Page 662
1	know him, correct?	1	52418.
2	A Yes.	2	Which is part of the same composite,
3	Q And just for the ladies and gentlemen of	3	correct?
4	the jury, can you explain who Mr. Pollack is.	4	A Yes, so it appears.
5	A Mark Pollack is I should know his	5	Q And it says: "Mission accomplished by
6	title, but he is an employee of the Personal Care	6	promoting," and then the first bullet point says:
7	Products Council. He reports directly to our CEO.	7	"Voluntary industry self-regulation."
8	He has an executive VP title. Perhaps it's for	8	Is that still a primary mission of PCPC?
9	membership. I'm not sure.	9	A I guess I would probably say no in the
10	Q Okay. And did you read Mr. Pollack's	10	fact that we have been working on getting updated
11	deposition transcript?	11	regulations passed for the cosmetic industry for
12	A I did not.	12	the past 12 years.
13	Q All right. Can we go to document 50	13	Q Well, let's go to the next document,
14	52415.	14	which is PCPC 52424.
15	This was a composite document. Which	15	And it says at the top "Self-regulation
16	has been marked as Exhibit 70.	16	Programs," and under the first bullet point it
17	(Exhibit No. 70 was marked for	17	says "CIR," correct?
18	identification.)	18	A Yes.
19	BY MR. GOLOMB:	19	Q All right. And CIR is still a
20	Q To me it appears to be a it's a PCPC	20	self-regulatory program that is funded by the
21	document, and to me it appears to be a PowerPoint	21	PCPC, correct?
22	of some sort.	22	A It is still funded by the PCPC, correct.
23	Have you seen this before?	23	Q And it's still a self-regulatory
24	A I may have seen it in my preparation.	24	program, correct?
25	I'm not sure.	25	A I guess you could call it that. I mean,
	Page 661	23	Page 663
1	Q Okay. Can you tell us what it is?	1	we we undertook CIR because FDA didn't. So
2	A Well, it looks like it's kind of an	2	Q The next document in that same
3	introduction to what is what is CTFA.	3	PowerPoint is PCPC 52426.
4	Obviously, this is older since we're now PCPC.	4	Do you see that?
5	MR. LOCKE: And just for the record, I	5	A Yes.
6	want to note it's missing quite a few pages, and	6	Q And it basically is talking about the
7	some pages well	7	the trade association obviously being at that time
8	MR. TISI: Right. And for the record,	8	CTFA, now PCPC, and some of the the member
9	,		CITA, now i Ci C, and some of the the member
)		ıu	samilage garragt?
1.0	it was about a 50-page document, and the ones I	9	services, correct?
10	made copies of are the ones I'm asking questions	10	A Yes.
11	made copies of are the ones I'm asking questions about.	10 11	A Yes. Q And the first bullet point provides
11 12	made copies of are the ones I'm asking questions about. BY MR. GOLOMB:	10 11 12	A Yes. Q And the first bullet point provides current information?
11 12 13	made copies of are the ones I'm asking questions about.  BY MR. GOLOMB:  Q Is there anything, based on your review	10 11 12 13	A Yes. Q And the first bullet point provides current information? A Yes.
11 12 13 14	made copies of are the ones I'm asking questions about.  BY MR. GOLOMB:  Q Is there anything, based on your review of those documents, that can tell us when this was	10 11 12 13 14	A Yes. Q And the first bullet point provides current information? A Yes. Q The second extends your resources,
11 12 13 14 15	made copies of are the ones I'm asking questions about.  BY MR. GOLOMB:  Q Is there anything, based on your review of those documents, that can tell us when this was used?	10 11 12 13 14 15	A Yes. Q And the first bullet point provides current information? A Yes. Q The second extends your resources, meaning that you can pull your resources like as
11 12 13 14 15 16	made copies of are the ones I'm asking questions about.  BY MR. GOLOMB:  Q Is there anything, based on your review of those documents, that can tell us when this was used?  A No. That's to say, only from CTFA that	10 11 12 13 14 15	A Yes. Q And the first bullet point provides current information? A Yes. Q The second extends your resources, meaning that you can pull your resources like as in a task force.
11 12 13 14 15 16 17	made copies of are the ones I'm asking questions about.  BY MR. GOLOMB:  Q Is there anything, based on your review of those documents, that can tell us when this was used?  A No. That's to say, only from CTFA that tells you something.	10 11 12 13 14 15 16	A Yes. Q And the first bullet point provides current information? A Yes. Q The second extends your resources, meaning that you can pull your resources like as in a task force. A That's one way, yes.
11 12 13 14 15 16 17	made copies of are the ones I'm asking questions about.  BY MR. GOLOMB:  Q Is there anything, based on your review of those documents, that can tell us when this was used?  A No. That's to say, only from CTFA that tells you something.  Q Right. So when did CTFA change to PCPC?	10 11 12 13 14 15 16 17	A Yes. Q And the first bullet point provides current information? A Yes. Q The second extends your resources, meaning that you can pull your resources like as in a task force. A That's one way, yes. MR. LOCKE: Objection.
11 12 13 14 15 16 17 18	made copies of are the ones I'm asking questions about.  BY MR. GOLOMB:  Q Is there anything, based on your review of those documents, that can tell us when this was used?  A No. That's to say, only from CTFA that tells you something.  Q Right. So when did CTFA change to PCPC?  A Roughly 2006.	10 11 12 13 14 15 16 17 18	A Yes. Q And the first bullet point provides current information? A Yes. Q The second extends your resources, meaning that you can pull your resources like as in a task force. A That's one way, yes. MR. LOCKE: Objection. BY MR. GOLOMB: Q And then the third bullet point is allows you to influence industry policy and action. Correct?

72 (Pages 660 to 663)

Page 664 Page 666 1 A That's what it says. 1 clearance required. 2 Q Right. So meaning that PCPC, or at that 2 A There's no premarket approval, that's 3 time CFTA, kind of acted as the intermediary to 3 correct. 4 deal with the government confrontation? 4 Q As opposed to a pharmaceutical which 5 5 A For example, comments where the does. 6 companies would -- where we would coordinate 6 A That the active ingredients would be 7 and -- and we would submit comments. 7 approved, yes. 8 8 Q Right. Cosmetics have less rigorous Q Correct. Or as in this case, where 9 the -- the CFTA would put its name on a document 9 inspections --10 so that J -- J&J didn't have to. 10 A Yes. 11 MR. LOCKE: Objection. 11 Q -- than a pharmaceutical. THE WITNESS: We were -- we were the And cosmetics have no specific standards 12 12 13 face of -- we were serving as the face of the 13 for efficacy. 14 industry. 14 A Well, cosmetics don't have efficacy the BY MR. GOLOMB: 15 same way that drugs do, so that just kind of 15 16 Q Right. And in this case, though, you 16 17 were serving as the face of the industry at the 17 Q Correct. That's part of the 18 specific request of J&J, who said -- who basically 18 self-regulatory standard. 19 concurred with the report that they reviewed, but A No, I mean, cosmetics are not -- they 19 suggested that it shouldn't be their name on it, 20 20 don't affect the structure or function of the 21 it should be your name on it, correct? 21 body. That's by definition. So they don't have 22 MR. LOCKE: Objection. 22 efficacy in a way that a drug would. THE WITNESS: We had to agree with the Q Let's turn to 52505. 23 23 Well, that's it, but it's upside down on 24 report as well. 24 25 BY MR. GOLOMB: 25 the screen. There you go. Page 665 Page 667 1 Q All right. But that's to allow them to 1 So when this describes expert panels, it avoid direct company-government confrontation, 2 2 talks about liaison members, and I assume, correct 3 correct? 3 me if I'm wrong, this is liaisoned from the -- at 4 4 MR. LOCKE: Objection. the time the CFTA to various governmental 5 THE WITNESS: I'm not sure that would be 5 agencies, correct? 6 confrontation, but -- but, yes, we were the face 6 MR. LOCKE: Objection. 7 7 of the industry. THE WITNESS: I'm sorry. These are --8 8 yeah, there's three liaison members that still BY MR. GOLOMB: 9 Q All right. And the next document is 9 exist today. One is from FDA, one is from 10 10 Consumer Federation of America, and one is 52457. 11 This is essentially kind of describes 11 representing industry. 12 the differences, does it not, between cosmetic and 12 BY MR. GOLOMB: 13 the pharmaceutical? 13 Q Right. And these -- and so there was a 14 A In some ways, yes. And I have to say 14 lot of talk about John Bailey today. this -- this is out of date. I mean, we would not 15 15 16 produce something like this today. 16 Q So this is at a time when John Bailey Q But it's still holds true, though. You was still at the FDA, correct? 17 17 18 may not produce it, but it still holds true. 18 A Correct. 19 A Well, but -- no, what I'm saying is, for 19 Q And I want to understand the timeline of 20 example, in this legislation that we are 20 this. So with -- specifically with John Bailey. 21 advocating for -- good manufacturing practices are 21 The -- the first Citizens Petition was 22 a part of that, just as an example. So things 22 in 1993, correct? 23 change. 23 A Yes. 24 24 Q But one -- one of the things that still Q And that was at a time that John Bailey 25 holds true is that cosmetics have no prior FDA 25 was at the FDA, correct?

73 (Pages 664 to 667)

	Page 668		Page 670
1	A Yes.	1	A Correct.
2	Q And as as we saw from the letter,	2	Q to the CFTA or the PCPC.
3	John Bailey at some point, representing the FDA,	3	A Correct.
4	wrote a letter not rejecting the Citizens Petition	4	Q And that was after after he came to
5	but, rather, saying they didn't have the resources	5	the PCPC, and Bailey set up the meeting with the
6	to deal with it at that time, correct?	6	FDA, correct?
7	A I think that was just the initial	7	MR. LOCKE: Objection. Asked and
8	response.	8	answered.
9	Q The initial response in 1993, that's	9	THE WITNESS: Right. When he came to
10	what I'm talking about.	10	the he eventually set up the meeting in 2009.
11	A Right, which is but that's I mean,	11	BY MR. GOLOMB:
12	that's how they respond to Citizens Petitions	12	Q Right. And after he set up the meeting
13	initially, I think almost always.	13	with his old subordinates, that's when the the
14	Q I'm not I'm not questioning it one	14	Citizens Petition was rejected, correct?
15	way or the other. I'm just trying to understand	15	MR. LOCKE: Objection.
16	the timeline.	16	THE WITNESS: I think there were other
17	A He wrote that initial letter in	17	things that went on in the meantime. For example,
18	response, yes.	18	the assessment of the talcs admittedly not
19	Q Right. When he was when he was at	19	exhaustive, but the assessment of talcs for
20	the FDA.	20	asbestos.
21	A At FDA, Yes.	21	BY MR. GOLOMB:
22	Q And then he gets hired by the CFTA when?	22	Q Well, but at that point in 2008, there
23	A Okay. Let's see. I started in '97.	23	had been 24 or more studies that already looked at
24	It's like 2000 and let's see. He took my	24	the association between talc and ovarian cancer,
25	boss old boss's job in 2000 and	25	and something like 18 of those studies showed a
	Page 669		Page 671
1	Q If you can speak up so that the	1	statistically significant association between talc
2	A I'm just ruminating instead of silence.	2	and ovarian cancer, correct?
3	Q Yeah, I know, but if you're going to	3	MR. LOCKE: Objection.
4	ruminate out loud, you have to say it so the court	4	THE WITNESS: I would say there were
5	reporter can get it.	5	it's it's much more it's more complex than
6	A Just trying to figure out it would	6	that. I mean, there were other issues, as have
7	have been roughly 2003, '2.	7	been pointed out, of biologic plausibility, of
8	Q Okay. And between 1993 and 2002 or	8	dose-response. So it's a little not as
9	2003, when Bailey came from the FDA to the CFTA,		
	2005, when baney came from the FDA to the CFTA,	9	straightforward as that.
10	there had been no response to the Citizens	9   10	
10 11			straightforward as that.
	there had been no response to the Citizens	10	straightforward as that. BY MR. GOLOMB:
11	there had been no response to the Citizens Petition other than, We don't have the resources,	10 11	straightforward as that.  BY MR. GOLOMB:  Q Well, understood. I mean, we we I
11 12	there had been no response to the Citizens Petition other than, We don't have the resources, correct?	10 11 12	straightforward as that.  BY MR. GOLOMB:  Q Well, understood. I mean, we we I think we can agree that during this period of time
11 12 13	there had been no response to the Citizens Petition other than, We don't have the resources, correct? MR. LOCKE: Objection.	10 11 12 13	straightforward as that.  BY MR. BY MR. GOLOMB:  Q And what was the response?  A I thought the initial one was rejected.  Q Okay. And is that something you saw	10 11 12 13 14 15 16 17 18	straightforward as that.  BY MR. GOLOMB:  Q Well, understood. I mean, we we I think we can agree that during this period of time between, you know, 1982 and 2008, that while there were all these other studies that were coming out, more than two dozen studies, most of which showed the statistically significant association, while at the same time Johnson & Johnson and the PCPC were rejecting case controlled studies of their own, but at that during that period of time,
11 12 13 14 15 16 17 18 19 20	there had been no response to the Citizens  Petition other than, We don't have the resources, correct?  MR. LOCKE: Objection.  THE WITNESS: I thought there was a response.  BY MR. GOLOMB:  Q And what was the response?  A I thought the initial one was rejected.  Q Okay. And is that something you saw today?	10 11 12 13 14 15 16 17 18 19	straightforward as that.  BY MR. GOLOMB:  Q Well, understood. I mean, we we I think we can agree that during this period of time between, you know, 1982 and 2008, that while there were all these other studies that were coming out, more than two dozen studies, most of which showed the statistically significant association, while at the same time Johnson & Johnson and the PCPC were rejecting case controlled studies of their own, but at that during that period of time, industry chose, rather than doing its own study,
11 12 13 14 15 16 17 18 19 20 21	there had been no response to the Citizens Petition other than, We don't have the resources, correct?  MR. LOCKE: Objection.  THE WITNESS: I thought there was a response.  BY MR. GOLOMB:  Q And what was the response?  A I thought the initial one was rejected.  Q Okay. And is that something you saw today?  A No, I haven't seen it today. We just	10 11 12 13 14 15 16 17 18 19 20 21	straightforward as that.  BY MR. GOLOMB:  Q Well, understood. I mean, we we I think we can agree that during this period of time between, you know, 1982 and 2008, that while there were all these other studies that were coming out, more than two dozen studies, most of which showed the statistically significant association, while at the same time Johnson & Johnson and the PCPC were rejecting case controlled studies of their own, but at that during that period of time, industry chose, rather than doing its own study, to do a critical analysis of the individual studies, correct?  MR. LOCKE: Objection.
11 12 13 14 15 16 17 18 19 20 21 22	there had been no response to the Citizens Petition other than, We don't have the resources, correct?  MR. LOCKE: Objection.  THE WITNESS: I thought there was a response.  BY MR. GOLOMB:  Q And what was the response?  A I thought the initial one was rejected.  Q Okay. And is that something you saw today?  A No, I haven't seen it today. We just saw the latter one today, the 2008, that was	10 11 12 13 14 15 16 17 18 19 20 21	straightforward as that.  BY MR. GOLOMB:  Q Well, understood. I mean, we we I think we can agree that during this period of time between, you know, 1982 and 2008, that while there were all these other studies that were coming out, more than two dozen studies, most of which showed the statistically significant association, while at the same time Johnson & Johnson and the PCPC were rejecting case controlled studies of their own, but at that during that period of time, industry chose, rather than doing its own study, to do a critical analysis of the individual studies, correct?

74 (Pages 668 to 671)

Page 672 Page 674 1 THE WITNESS: Yeah, we don't -- PCPC 1 BY MR. GOLOMB: 2 Q And -- but did not do its own study. 2 does not get into labeling. 3 3 A We did not do an epidemiology study. BY MR. GOLOMB: 4 Q Mr. Tisi asked you before about the 4 Q Right. And as far as you know, the FDA standard, and I've asked you about this before, so 5 also doesn't tell a company what to put on a 5 б I'm not going to go into a lot of detail about it. 6 label, correct? 7 But it's a document which was previously 7 MR. LOCKE: Objection. Beyond the 8 marked for identification as Plaintiff's Exhibit 8 scope. 9 9 324 ---THE WITNESS: I mean, the FDA opined on 10 MR. GOLOMB: Okay. That's fine. 10 the Citizens Petitions. 11 -- which we will mark as Exhibit 71. 11 BY MR. GOLOMB: 12 (Exhibit No. 71 was marked for 12 Q Well, but they don't tell the company 13 identification.) 13 when -- when to put a label on and when not to, 14 BY MR. GOLOMB: 14 Q All right. This is the Code of Federal MR. LOCKE: Objection. Beyond the 15 15 16 Regulations, Title 21. Are you familiar with 16 scope. 17 this? 17 THE WITNESS: I really don't know. 18 18 BY MR. GOLOMB: A Yes. Q All right. Did you at any time in 19 Q Were you aware of this before I asked 19 preparation for any of these depositions read the 20 you about it? 20 21 A I -- I'm not familiar with specifically 21 testimony of Dr. Bailey? 22 these labeling requirements, and we don't get into 22 A I did not. issues of labeling beyond telling our -- helping 23 Q Okay. Were you aware that Dr. Bailey 2.3 24 our companies understand what current labeling 24 has testified not in a -- in an ovarian cancer 25 requirements are in our labeling manual. 25 case, but in an asbestos case where he discussed Page 673 Page 675 1 Q Okay. But I -- I've asked you about 1 very specifically the role of the FDA in this before, correct? Do you recall that? 2 2 cosmetics? 3 A I -- I -- I don't recall specifically. 3 MR. LOCKE: Objection. Q All right. This is the Code of Federal 4 4 You can answer. 5 Regulations, Title 21, Section 740.1, 5 THE WITNESS: I mean, I knew he 6 "Establishment of Warning Statements." 6 testified. I don't know any specifics beyond 7 7 Did I read that correctly? that. 8 8 A Yes. BY MR. GOLOMB: 9 Q And can you just read subsection (a) for 9 Q All right. I want to move to topic 7, 10 10 which is the National Cancer Institute. the jury, please. 11 A "The label of a cosmetic product shall 11 What is the National Cancer Institute? 12 bear a warning statement whenever necessary or 12 A It's a governmental agency. I'm not 13 appropriate to prevent a health hazard that may be 13 sure "agency" is the right word. It's a 14 associated with the product." 14 governmental body that I believe funds cancer 15 15 Q "That may be associated with the research. 16 product," correct? 16 Q And what -- what, if any, communications, directly or indirectly, does the 17 A That's what it says. 17 18 Q All right. And that is a determination PCPC have with the NCI generally? 18 of whether or not a company is going to label a A I'm not aware of any. 19 19 20 cosmetic product with a warning statement. That 20 Q At any time? 21 is a decision to be made by the company, correct? 21 A I'm not aware of any, no, at any time. 22 A That's --22 Q All right. Have you ever -- and I'm 23 MR. LOCKE: Objection. 23 not -- when I say "you," I'm talking about anybody 24 THE WITNESS: That's not something --24 at PCPC because that's your role here today --MR. LOCKE: Beyond the scope. 25 25 A Yes.

75 (Pages 672 to 675)

Page 676 Page 678 1 Q -- to testify on behalf of PCPC. 1 A I wouldn't have because I am absolutely 2 Have you had any contact with a member 2 certain they would not do that without talking to 3 3 organization, be it J&J, Luzenac, Rio Tinto, the Science department. 4 Imerys, or any other member, where you have 4 Q And why do you say that? A Because that's just the way we work. I 5 learned that they've had contact with the NCI? 5 6 A Not that I'm aware of. mean, when -- when the Public Affairs, for б 7 Q So when the NCI on a number of occasions 7 example, is doing any kind of a science issue, 8 8 on their website identifies talc as a risk of they're consulting with us. They're not doing 9 ovarian cancer, and then that was taken off the 9 that on their own. Q Let's go to the next document, which 10 website, you have no idea why? 10 11 A Correct. 11 we'll mark as Exhibit 72. 12 MR. LOCKE: Objection. 12 (Exhibit No. 72 was marked for 13 BY MR. GOLOMB: 13 identification.) Q Okay. Were you -- were you aware of 14 BY MR. GOLOMB: 14 that before I just told you that? 15 15 Q And this again is --16 A I was, and I can't remember how I became (Counsel conferring.) 16 17 aware of that. I'm not sure I was ever aware that 17 BY MR. GOLOMB: 18 18 Q Yeah, it's been previously marked for it was on. I was maybe aware that it was off. 19 identification as P-72. It's up on the screen. But I -- I don't recall --19 20 Q Have you ever --20 (Counsel conferring.) 21 A -- when I learned that. 21 BY MR. GOLOMB: 22 Q I'm sorry. I didn't mean to interrupt. 22 Q Now, this was the NCI website as of 23 A Oh, no, since I don't -- I'm not aware 23 September 15th, 2011. You can see that from the 24 of when I learned that. I mean, I just can't 24 lower right-hand corner. Do you see that? 25 25 A Yes. remember. Page 677 Page 679 1 Q Okay. Have you ever looked at the NCI 1 Q And this is the "Ovarian Cancer 2 website for any reason? 2 Prevention, PDQ, Prevention Patient Information." 3 A I think I looked at that having heard 3 Do you see that? 4 about that. 4 A Yes. 5 Q Well, you have a -- my word, not 5 Q Now, are you familiar with the PDQ? 6 yours -- I know we have previously gone through 6 A Um --7 the organizational chart in great detail, and 7 Q Not this one in particular. A PDQ 8 there was a Public Relations/Communications 8 generally. 9 9 A I'm trying to -- I'm not sure I know department, correct? 10 10 what it stands for. I think, again, because I've A On -- on our website? Q On PCPC. 11 seen something along these lines, I --11 12 A We have -- yes. 12 Q It's a Physician's Data Query. 13 Q Right. And in preparation for this 13 A Okay. 14 deposition, you were asked very specifically about 14 O Does that sound familiar? 15 communications, directly or indirectly, with the 15 A Yeah, it does now. Yeah. 16 NCI concerning the risk of ovarian cancer caused 16 Q Okay. And so in order to go on to the website and go specifically to the PDQ, you have 17 by application of talcum powder. 17 A Okay. Yes. to be a physician or scientist that has access. 18 18 Is that consistent with your understanding? 19 Q And so in your role as a 30(b)(6) 19 20 witness, did you go to any of the employees within MR. LOCKE: Objection. Beyond the 20 21 the Communications department, Public Relations 21 scope. 22 department, whatever you call it, as well as 22 THE WITNESS: Yeah, I just wouldn't have 23 the -- the -- and again my word, not yours -- the 23 known that. 24 lobbying arm of PCPC to find out if they had any 24 BY MR. GOLOMB: 25 communications with the NCI? 25 Q Okay. And that's fine, by the way. If

76 (Pages 676 to 679)

the NCI as of September 5th, 2011, correct?  A Right I don't know.  Q So that if a – a woman who has ovarian cancer and is claiming that she got her ovarian cancer from the use of talcump powder, she would not, unless she was a physician or a scientist, have access to the PDQ. Is that consistent with your understanding?  MR LOCKE: Objection. Beyond the scope.  THE WITNESS: September 15th, but yes.  BY MR. GOLOMB:  THE WITNESS: I think only just from what you just said, that access is limited to 12 document, which is MBS-CRE271.  Eshibit No. 73 was marked for identification.)  BY MR. GOLOMB:  O Chay. Well, on the other hand, if anybody went on to the NCI website, and in the scarch box typed in "ovarian cancer," they would get a – a Snapshot of Ovarian Cancer. Is that consistent with your understanding?  MR. LOCKE: Objection. Beyond the scope.  What you understanding the state of this search box typed in "ovarian cancer," they would get a – a Snapshot of Ovarian Cancer. Is that consistent with your understanding?  MR. LOCKE: Objection. Beyond the scope.  Q Okay. Now, let's go to the next document, which is MBS-CRE271.  (Eshibit No. 73 was marked for identification.)  BY MR. GOLOMB:  A Yes.  A Yes.  A Yes.  A Yes.  A Yes.  A Correct.  A He is with the CRB.  A Page 683  A Correct.  A He is with the CRB.  A Page 1 of 2, from Jim Tozzi to Bill Kelly. Jr.?  A He is with the CRB.  A Page 1 of 2, from Jim Tozzi to Bill Kelly. Jr.  A Pagin and the anus, may reach the ovaries by entering the vagina.'  A That's what it says, yes.  A That's what it says, yes.  A Correct.  A Correct.  A Correct.  A Correct.  A Correct.  A Page 683  A Correct.  A Page 683  A Correct.  A Correct.  A Page 683  A Correct.  A Page 684  BY MR. GOLOMB:  Correct. A Right. I don't know. Q So that if a – a woman who has ovarian cancer and is claiming that she got her ovarian cancer from the use of talcum powder, she would not, unless she was a physician or a scientist, have access to the PDQ. Is that consistent with your understanding? MR. LOCKE: Objection. Beyond the scope.  THE WITNESS: September 15th, but yes. BY MR. GOLOMB: Q Olay, Now, let's go to the next document, yes. Q Okay, Now, let's go to the next document, which is MBS-CRE271. Lifethibit No. 73 was marked for identification.)  BY MR. GOLOMB: Q Okay, Well, on the other hand, if anybody went on to the NCI website, and in the search box typed in "ovarian cancer." they would get a – a Sangshot of Ovarian Cancer. Is that consistent with your understanding? AR. LOCKE: Objection. Beyond the scope.  THE WITNESS: I guess. Again, I'm not scope.  THE WITNESS: I guess. Again, I'm not sure.  Page 681  Exhibit – what was it 72? – if you take a look at Fxhibit 72 – A Okay. BY MR. GOLOMB: C Orect. A Har's — thar's the date of this document, yes.  Q Okay. Now, let's go to the next document, wisc. A Law it in preparation for this. A I was it in preparation for this. A I was it in preparation for this. A Ves. C Os and a very open and the fore? A No, I need time to review it now or – A Ves. C Os dead. A (Peruses document.) Okay. Q This is an e-mail exchange back in April Of 20 ahead. A Correct. Q And if you look at the middle e-mail on show the cover page and the portions relevant to to take. A Ha os ee that? A Hod see that? A Hod who is Jim Tozzi? A Ray on the cover page and the portions relevant to the waiting the vagina. A Ha is with the CRE. A Has was marked for identification.)  A Correct. Q And if you loo	1	you don't know, it's	1	the NCI as of September 5th, 2011, correct?
3   C   So that if a - a woman who has ovarian cancer and is claiming that she got her ovarian cancer from the use of talcum powder, she would not, unless she was a physician or a scientist, have access to the PDQ. Is that consistent with your understanding?   MR. LOCKE: Objection. Beyond the volument, value of the value of the volument, value of the value of t		- <del>-</del>		
4 cancer and is claiming that she got her ovarian cancer from the use of taleum prowder, she would font, unless she was a physician or a scientist, have access to the PDQ. Is that consistent with your understanding?  9 MR. LOCKE: Objection. Beyond the scope. 11 THE WITNESS: I think only just from what you just said, that access is limited to physicians, so 14 BY MR. GOLOMB: 15 Q. Okay. Well, on the other hand, if anybody went on to the NCI website, and in the search box typed in "ovarian cancer," they would get a - a Snapshot of Ovarian Cancer. Is that consistent with your understanding? 18 get a - a Snapshot of Ovarian cancer," they would get a - a Snapshot of Ovarian cancer," they would get a - a Snapshot of Ovarian cancer," they would sure. 20 MR. LOCKE: Objection. Beyond the scope. 21 THE WITNESS: I guess. Again, I'm not sure. 22 WR. LOCKE: Objection. Beyond the scope. 22 THE WITNESS: I guess. Again, I'm not sure. 23 A Okay. 4 Q Okay. So if you take a look at Exhibit - what was it 72? - if you take a look at Exhibit - what was is the PDQ on ovarian cancer prevention, correct? 4 Q Okay. So if you go to page 3 of that document, in the middle of the document it refers to talc. 14 Do you see that? 15 A I do see that. 16 Q And it says: "The use of talc may in the middle of the document it refers to talc. 19 powder dusted on the perineum, the area between the vagina and the anus, may reach the ovaries by entire the vagina." 21 Do you see that? 22 A That's what it says, yes. 23 Q Did I read that correctly? 24 BY MR. GOLOMB: 25 WR. COCCE: Objection. Beyond the scope. 26 THE WITNESS: September 15th, by Cub. A That's the date of this document, with your understanding? 27 A Stay with ShS-CRE271. 28 A Coccess is limited to document, with you understanding? 29 A Yes. 29 Q Nale is preparation for this. 29 Q Nale with preparation for this. 29 Q And if you look at the middle e-mail on page 3 of that document, is in the middle of the document it refers to talc. 30 Q Nale is an e-mail exchange back in April of 2013 betwee	3	•	3	
5 cancer from the use of talcum powder, she would not, unless she was a physician or a scientist, have access to the PDQ. Is that consistent with your understanding?  9 MR. LOCKE: Objection. Beyond the scope.  11 THE WITNESS: I think only just from what you just said, that access is limited to physicians, so  12 BY MR. GOLOMB:  13 Okay. Well, on the other hand, if anybody went on to the NCI website, and in the garch box typed in "ovarian cancer," they would get a – a Snapshot of Ovarian Cancer. Is that consistent with your understanding?  14 BY MR. GOLOMB:  15 Q Okay. Well, on the other hand, if anybody went on to the NCI website, and in the search box typed in "ovarian cancer." Is that consistent with your understanding?  16 MR. LOCKE: Objection. Beyond the scope.  17 THE WITNESS: I guess. Again, I'm not such as a look at Exhibit 72 –  18 A Okay.  19 Q Okay. Do you need time to review it now or  10 Q Okay. Do you need time to review it now or  11 Exhibit – what was it 72? – if you take a look at Exhibit 72 –  12 A Okay.  13 A Okay.  14 Q – this is the PDQ on ovarian cancer. Talcum preparation, correct?  15 pages I and 3 of a seven-page document.  16 MR. LOCKE: Just to be clear, it's pages I and 3 of a seven-page document.  17 page 1 of 2, from Jim Tozzi to Bill Kelly.  18 A Yes.  19 Q Who is William Kelly, Jr.?  10 A Correct.  20 Q Mo wis is Jim Tozzi?  21 A A Saw it in preparation for this.  22 Q Who is William Kelly, Jr.?  23 A Okay.  24 Q - this is the PDQ on ovarian cancer.  25 prevention, correct?  26 MR. LOCKE: Just to be clear, it's pages I and 3 of a seven-page document.  27 A That's what it says.  28 Q So if you go to page 3 of that document, in the middle of the document it refers to talc.  29 Q So if you go to page 3 of that document it refers to talc.  20 Q So if you go to page 3 of that document it refers to talc.  20 Q So if you go to page 3 of that document it refers to talc.  20 Q So if you go to page 3 of that document it refers to talc.  20 Q So if you go to page 3 of that document		_		<del>-</del>
6 not, unless she was a physician or a scientist, 7 have access to the PDQ. Is that consistent with 8 your understanding? 9 MR. LOCKE: Objection. Beyond the 10 scope. 11 THE WITNESS: I think only just from 12 what you just said, that access is limited to 13 physicians, so 14 BY MR. GOLOMB: 15 Q Okay. Well, on the other hand, if 16 anybody went on to the MCI website, and in the 17 scarch box typed in "ovarian cancer," they would 18 get a – a Snapshot of Ovarian Cancer. Is that 19 consistent with your understanding? 20 MR. LOCKE: Objection. Beyond the 21 scope. 22 THE WITNESS: I guess. Again, I'm not 23 sure. 24 BY MR. GOLOMB: 25 Q Okay. So if you take a look at 26 Page 681 1 Exhibit – what was it 72? – if you take a look 2 at Exhibit 72 – 2 A Okay. 4 Q – this is the PDQ on ovarian cancer 5 preventio, correct? 6 MR. LOCKE: Just to be clear, it's 7 pages I and 3 of a seven-page document. 8 MR. GOLOMB: 10 Oyou see that? 11 BY MR. GOLOMB: 12 Q So if you go to page 3 of that document, 13 in the middle of the document it refers to tale. 10 Loyou see that? 11 Do you see that? 12 Do you see that? 13 Do you see that? 14 Do you see that? 15 Do you see that? 16 A That's what it says, yes. 17 A That's what it says, yes. 18 A That's what it says, yes. 19 Q Okay. Now, let's go to the next document, which is MBS-CRE271. 10 MR. GOLOMB: 11 BY MR. GOLOMB: 12 Q Okay. Now, let's go to the next document, which is MBS-CRE271. 12 (Exhibit to, 73 was marked for identification.) 12 Q Okay. Do you see that the fore? 14 Law it in preparation for this. 15 A 1 saw it in preparation for this. 16 Q Okay. Do you need time to review it now or – 18 A Yes. 21 Q O Go ahead. 22 A No, I need time to review it now or – 23 A No, I need time to review it. 24 Q This is an e-mail exchange back in April of 2013 between William Kelly, Jr., and Jim Tozzi. 25 Correct? 26 A How is William Kelly, Jr., and Jim Tozzi. 27 A Ho is with the CRE. 28 Q And who is William Kelly, Jr., and Jim Tozzi. to Bill Kelly, 29 A Yes. 20 Q It says – the second – the last line			5	
7 have access to the PDQ. Is that consistent with 8 your understanding? 9 MR. LOCKE: Objection. Beyond the scope. 11 THE WITNESS: I think only just from what you just said, that access is limited to physicians, so 12 physicians, so 13 BY MR. GOLOMB: 15 Q Okay. Well, on the other hand, if anybody went on to the NCI website, and in the scape hox typed in "ovarian cancer," they would get a – a Snapshot of Ovarian Cancer. Is that consistent with your understanding? 20 MR. LOCKE: Objection. Beyond the scope. 21 THE WITNESS: I guess. Again, I'm not 22 Sure. 22 THE WITNESS: I guess. Again, I'm not 23 sure. 24 BY MR. GOLOMB: 25 Q Okay. So if you take a look at  Page 681  1 Exhibit – what was it 72? – if you take a look at Exhibit 72 – 3 A Okay. Q – this is the PDQ on ovarian cancer 5 prevention, correct? 5 MR. LOCKE: Just to be clear, it's 7 pages I and 3 of a seven-page document. 8 MR. GOLOMB: Correct. And that was to show the cover page and the portions relevant to talc. 10 Q So if you go to page 3 of that document, in the middle of the document, ir the middle of the document, ir the middle of the document, in the middle of the d		*		
8   your understanding?   9   MR. LOCKE: Objection. Beyond the coope.   10   cocyoe.   11   THE WTINESS: I think only just from   12   what you just said, that access is limited to   13   physicians, so   14   BY MR. GOLOMB:   15   Q Okay. Well, on the other hand, if   16   anybody went on to the NCI website, and in the search box typed in "ovarian cancer," they would get a - a Snapshot of Ovarian Cancer. Is that   19   consistent with your understanding?   20   MR. LOCKE: Objection. Beyond the scope.   21   THE WTINESS: I guess. Again, I'm not sure.   22   THE WTINESS: I guess. Again, I'm not sure.   23   Whis is an e-mail exchange back in April   24   Go ahead.   24   Go 2013 between William Kelly, Jr., and Jim Tozzi, correct?   27   Q who is William Kelly, Jr., and Jim Tozzi, correct?   28   Whis with the CRE.   Q and who is Jim Tozzi to Bill Kelly, April 15th, 2013, at 11:12 a.m. Do you see that?   A Yes.   Q Doyo usee that?   A Yes.   Q Doyo usee that?   A Yes.   Q Doyo usee that?   A That's what it says, yes.   Q Did I read that correctly?   29   And doyou know what he means by "calm powder dusted on the perineum, the area between the vagina and the anus, may reach the ovaries by centering the vagina."   20   And doyou know what he serefering to when the cover page and the portions relevant to talc.   Q And it says: "The use of talc may powder dusted on the perineum, the area between the vagina and the anus, may reach the ovaries by centering the vagina."   20   Ond I read that correctly?   20   Ond		= -	7	
MR. LOCKE: Objection. Beyond the scope.			8	
10   Scope.   10   Mary or just said, that access is limited to physicians, so   14   BY MR. GOLOMB:   15   Q Okay. Well, on the other hand, if anybody went on to the NCI website, and in the search box typed in "ovarian cancer," they would sea a - a Snapshot of Ovarian Cancer. Is that consistent with your understanding?   19   Q - or are you familiar with it?   20   A No, I need time to review it now or -   21   Scope.   22   THE WITNESS: I guess. Again, I'm not sure.   24   BY MR. GOLOMB:   25   Q Okay. So if you take a look at   24   Exhibit - what was it 72? - if you take a look at exhibit 72 -   3   A Okay.   4   Q - this is the PDQ on ovarian cancer prevention, correct?   4   A No, I coed time to review it.   20   Go ahead.   20   This is an e-mail exchange back in April of 2013 between William Kelly, Jr., and Jim Tozzi, correct?   2   Q Who is William Kelly, Jr., and Jim Tozzi, correct?   4   Q Add it signs; when the cover page and the portions relevant to tale.   Q So if you go to page 3 of that document, in the middle of the document it refers to tale.   Q And it says: "The use of talc may powder dusted on the perineum, the area between the vagina and the anus, may reach the ovaries by entering the vagina."   20   And do you know what he reans by "calm powder dusted on the perineum, the area between the vagina and the anus, may reach the ovaries by entering the vagina."   20   And do you know what he means by "calm what he mans by "calm what he means by "calm what he mans by "calm what he mans he was w		•		• •
the With With Yilliam Kelly, Jr., and Jim Tozzi, Page 683  The With Was it 72? — if you take a look at Exhibit 72 — 3 A Okay. 77 (Pages 680 to 683)

	Page 684		Page 686
1	THE WITNESS: I mean, obviously he is	1	assume because it's an unusual name, that's who he
2	referring to litigation, I presume. But	2	is talking about, yes.
3	BY MR. GOLOMB:	3	BY MR. GOLOMB:
4	Q Okay. Well, are you aware one way or	4	Q All right. And do you know do you
5	the other as to whether or not there was any	5	know Mr. Sharma?
6	litigation in which any of these companies were	6	A I may have been on a phone call with him
7	sued as a result of the the relationship	7	once or twice, but I don't know if I've met him.
8	between talc and ovarian cancer as of April 13	8	Q All right. Have you ever spoken to him
9	April 15th, 2013?	9	specifically about tale and its association with
10	MR. LOCKE: When you say "any of these	10	ovarian cancer?
11	companies," to whom are you referring?	11	A As I said, I may have been on a phone
12	MR. GOLOMB: J&J and Imerys and their	12	
	•	13	call, and I can't remember context, but I mean,
13	predecessors.		it'd be on a conference call. I don't believe
14	MR. LOCKE: Objection. Beyond the	14	I've ever spoken to him one on one.
15	scope.	15	Q All right. And if we look at the last
16	THE WITNESS: Yeah, I don't know the	16	sentence going on to the next, the first sentence
17	dates of lawsuits, and I I just don't know.	17	of the next page, it says: "Shripal knows that we
18	BY MR. GOLOMB:	18	engineered the CIR report from the outset."
19	Q Okay. The on the bottom of the page,	19	Did I read that correctly?
20	there's an e-mail from William Kelly, Jr., to	20	A That's what it says.
21	Tozzi on April 15th, 2013, just 24 minutes before,	21	Q And that's from one CRE employee to
22	at 12:48 p.m.	22	another?
23	Do you see that?	23	A That's what it looks like.
24	A Yes.	24	Q Let let's take a look at the next
25	Q And if we look at the second paragraph	25	document, which was previously marked for
	Page 685		Page 687
1	that begins: "The only account I am working on	1	identification as Plaintiff's Exhibit P-225.
2	currently is talc." Do you see that?	2	(Exhibit No. 74 was marked for
3	A Yes.	3	identification.)
4	Q And that is that's William Kelly, Jr.	4	BY MR. GOLOMB:
5	saying that, correct?	5	Q This is another Ovarian Cancer
6	A Yes.	6	Prevention PDQ, correct?
7	Q And in the it says: "The only	7	A Yes.
8	account I am working on currently is talc. Of	8	Q And you'll see on the bottom right-hand
9	course, I also want to write an article on the IQA	9	corner it's dated June 12, 2013.

THE WITNESS: Based on limited evidence. BY MR. GOLOMB:  Q And in fact, this Ovarian Cancer Prevention PDQ that we're now referring to refers to the IARC report, correct?  MR. LOCKE: Objection.  THE WITNESS: Yes.
13 14 15 16 it 17 18 s 19 20 E	cope. BY MR. GOLOMB: Q Is what? A It says "talc." Q And from the same document, page 2 of 3, t specifically refers to talc, correct? MR. LOCKE: Objection. Beyond the cope. THE WITNESS: Yes. BY MR. GOLOMB: Q And can you just read that for the jury,	12 13 14 15 16 17 18 19 20 21	the they concluded that talc was a Class 2B carcinogen, correct?  MR. LOCKE: Objection.  THE WITNESS: Based on limited evidence. BY MR. GOLOMB:  Q And in fact, this Ovarian Cancer Prevention PDQ that we're now referring to refers to the IARC report, correct?  MR. LOCKE: Objection.  THE WITNESS: Yes. BY MR. GOLOMB:
13 14 15 16 it 17 18 s 19 20 E 21 22 p 23	cope. BY MR. GOLOMB: Q Is what? A It says "talc." Q And from the same document, page 2 of 3, t specifically refers to talc, correct? MR. LOCKE: Objection. Beyond the cope. THE WITNESS: Yes. BY MR. GOLOMB: Q And can you just read that for the jury, olease.	12 13 14 15 16 17 18 19 20 21	the they concluded that talc was a Class 2B carcinogen, correct?  MR. LOCKE: Objection.  THE WITNESS: Based on limited evidence. BY MR. GOLOMB:  Q And in fact, this Ovarian Cancer Prevention PDQ that we're now referring to refers to the IARC report, correct?  MR. LOCKE: Objection.  THE WITNESS: Yes. BY MR. GOLOMB: Q And do you see at the bottom third of

79 (Pages 688 to 691)

	Page 692		Page 694
1	BY MR. GOLOMB:	1	BY MR. GOLOMB:
2	Q Can you just read that for us, please.	2	Q Now, just to refresh your recollection
3	A It says, quote: "Based on solid	3	before you and I'll give you whatever time you
4	evidence, perineal application of talc is	4	need when we were talking before about the PDQ,
5	associated with a small increased risk of ovarian	5	I also referred to the snapshot. Do you recall
6	cancer. The International Agency for Research on	6	that?
7	Cancer has concluded that perineal talc is a	7	A Yes.
8	possible carcinogen."	8	Q And so this is a Snapshot of Ovarian
9	Q And then it talks about the magnitude of	9	Cancer from the NCI website. Do you understand
10	the effects, correct?	10	that?
11	A It does.	11	MR. LOCKE: Objection. Beyond the
12		12	scope, lack of foundation, form.
13	Q And it says an odds ratio of 1.24, correct?	13	THE WITNESS: Yes.
14		14	BY MR. GOLOMB:
15	MR. LOCKE: Objection.	15	
	THE WITNESS: That's what it says. BY MR. GOLOMB:	16	Q And that's dated August 8th, 2016,
16		17	correct?
17	Q Meaning that there is nearly a 25		MR. LOCKE: Same objections.
18	percent increased risk of harm, correct?	18	THE WITNESS: Yes.
19	MR. LOCKE: Objection.	19	BY MR. GOLOMB:
20	THE WITNESS: Well, there's a confidence	20	Q Have you have you seen this document
21	interval with that, but that's a that's what	21	before?
22	the odds ratio is.	22	A Again, I well, I think I've seen
23	BY MR. GOLOMB:	23	something from NCI once upon a time. It would
24	Q Right. And do you have enough	24	be I don't know what the date would be, so my
25	experience in epidemiology to understand that that	25	answer's going to be no.
	Page 693		Page 695
1	Page 693 is statistically significant?	1	Page 695 Q Okay. And
1 2		1 2	
	is statistically significant?  MR. LOCKE: Objection. Beyond the scope.		Q Okay. And
2	is statistically significant?  MR. LOCKE: Objection. Beyond the	2	Q Okay. And MR. LOCKE: I also want to note this is
2 3	is statistically significant?  MR. LOCKE: Objection. Beyond the scope.	2 3	Q Okay. And MR. LOCKE: I also want to note this is just one of six pages.
2 3 4	is statistically significant?  MR. LOCKE: Objection. Beyond the scope.  THE WITNESS: I think it depends	2 3 4	Q Okay. And MR. LOCKE: I also want to note this is just one of six pages. MR. GOLOMB: Right. And this is the

81 (Pages 696 to 699)

Page 702 Page 700 1 Q Okay. So as you sit here today, you 1 reports, and I know there was some question as to 2 recall that the NCI removed it from its website. 2 what was actually found, but there were reports, I 3 You don't remember how you -- how you learned 3 believe in the newspaper, from findings out of --4 that, and you don't know how that got off the 4 I think it was Mount Sinai Hospital or -- anyway, 5 5 website. Is that your testimony? of the finding of asbestos in talc. 6 A Correct. 6 Q And that was -- was that the finding of 7 Q Okay. Let's talk about the Talc 7 asbestos in talc, that talc specifically being 8 8 Interested Party Task Force. And I -- we've found in the ovarian tissue? talked a lot about this in the last deposition, 9 9 A No. I thought it was just talc being 10 10 found in -- excuse me -- asbestos being found in and so I'm going to try not to repeat myself. 11 But to be clear, there are various 11 talcum products. 12 records, some of which -- most of which refer to 12 Q Just generally? 13 the Talc Interested Party Task Force, some of 13 A Yes. 14 which refer to the Interested Party Task Force. 14 Q All right. And so you don't have a 15 They're one and the same; is that correct? recollection one way or the other as to what the 15 16 16 Henderson study concluded? A That's correct. A My recollection of the Henderson study 17 Q Do you know when the task force was 17 18 18 is that they were reporting the finding of talc in created? 19 ovaries, but I believe they also found them in 19 A I believe it was created in 19 -- maybe controlled women that hadn't been exposed to talc. 20 '71, or early '70s. 20 21 Q And why was it created? 21 22 22 A In response to the finding of asbestos Q Okay. And as you sit here today, do you or the reporting of asbestos in talc. know one way or the other as to whether or not 2.3 23 24 Q Okay. Well, was it the reporting of 24 the -- the Talc Interested Party Task Force was 25 asbestos or was it the reporting of talc in the 25 created before or after the Henderson study? Page 701 Page 703 1 1 MR. LOCKE: Objection. Asked and ovarian tissue? 2 A I thought it was the reporting of 2 answered. 3 asbestos. 3 THE WITNESS: As far as I'm aware, it 4 Q All right. You -- you were asked 4 was created in response to the asbestos issue. 5 5 earlier by Mr. Tisi about the association between BY MR. GOLOMB: 6 talc and ovarian cancer, and I think -- correct me 6 Q Okay. Well, that -- but that wasn't my 7 if I'm wrong, I think you said that you -- that 7 question. My question was, do you know one way or 8 "you," meaning PCPC, CFTA -- first learned about 8 the other as you sit here today -- because you 9 that potential association in 1982 after the 9 don't -- you don't know the chronology of the --10 Cramer study. Was that your testimony? 10 the asbestos finding and the Henderson study, 11 A I believe that's correct, yes. 11 correct? 12 Q Are you familiar with the Henderson 12 MR. LOCKE: Objection. THE WITNESS: Yeah, I don't know the 13 study? 13 14 A I do know what you are talking about, 14 year of the Henderson study. BY MR. GOLOMB: 15 15 yes. 16 Q And that was in the early '70s, correct? 16 Q Right. But my question to you is a very A That sounds right. 17 specific one, and that is, do you have a 17 18 Q All right. Was the Talc Interested 18 recollection one way or the other as to whether or 19 Party Task Force formed in response to the 19 not the Talc Interested Party Task Force was 20 Henderson study? 20 created in response to the Henderson study? 21 21 MR. LOCKE: Objection. Asked and A I believe it was formed in response to 22 the asbestos finding. 22 answered. 23 Q All right. And when you say "asbestos 23 THE WITNESS: What's the question? Was finding," what are you referring to? 24 24 it in response --25 A Well, I'm referring to the newspaper MR. GOLOMB: Can you read back the

82 (Pages 700 to 703)

Page 704 Page 706 1 could where we think we might have members who are 1 question, please. 2 THE WITNESS: I believe no. 2 interested, should know about this, and then see 3 3 if they're interested in again, you know, taking BY MR. GOLOMB: 4 4 on further activities related to a particular Q Okay. 5 5 A I believe it was created in response to topic. 6 6 Q And when you say "further activities," the asbestos issue. 7 7 Q And when you say "in response," what was what kind of activities? 8 8 the purpose of it? A It totally depends on what the task 9 9 A To address -- when there was the force is. Like I say, in the case of the talc-10 asbestos issues, then it was putting together a 10 finding, it was to look further into that to see if it was real, and then ultimately to come up 11 11 specification -- or, rather, there was a talc 12 specification, but adding in asbestos -- asbestos 12 with a specification so that -- to confirm that 13 there was no asbestos in talc. 13 to that specification and working on methods to --14 14 Q And -- and how is -- how is a task force for protection. 15 Q And one of the, as you say, further 15 like that created? 16 A So in general, if you -- I mean, if 16 activities is the hiring of scientists, correct? 17 there's a finding, then basically we inform our 17 A Well, it could be. 18 members, and we look for interest in pursuing some 18 Q Right. And it was in the case of the 19 19 talc -- the talc task force, correct? activities related to a -- a particular issue. 20 And in those -- those people again would, on their 20 A I'm not sure what you mean by "hiring of 21 own then, that would be the group that would 21 scientists." 22 22 decide where do we go from here, what do we do. Q Well, at some point in time in the -- in 23 response to the Citizens Petition, in response to 23 Q Okay. So it comes from you, meaning the 24 PCPC, rather than the members coming to you and 24 the NTP preliminary findings, the members of the 25 saying, you know, I just read something, this may 25 PCPC at that time, the CFTA, who were also a Page 707 Page 705 1 member of the Talc Interested Party Task Force, 1 be something that we need to create a task force 2 for? 2 funded the hiring of scientists and experts to 3 A Oh, no, it depends. It can go either 3 defend them in front of the NTP and to respond to 4 way. It can be us finding something. It's 4 the -- to the Citizens Petition, correct? 5 5 basically -- what our role would be then to A That can be one of the activities that 6 disseminate that information to see if there is 6 we undertake, yes. 7 7 interest in forming a task force and -- and taking O But it's --8 8 on further activities. A It can be doing a study, it could be 9 9 hiring a scientist or hiring a consultant, I Q Okay. And in the case of the Talc 10 Interested Party Task Force, was that something 10 guess, to look at an issue. 11 where the -- the CFTA went through its members or 11 Q Okay. 12 one of its members came to the CFTA? 12 A It could be any number of things. 13 A I think I'd have to say I don't know. 13 Q Okay. And -- and I think we can agree 14 Q Did you go back and -- there's minutes 14 that the -- the funding of the -- these task 15 of these -- of these meetings, right? 15 force, and the talc task force in particular, is 16 A Yes. 16 not your bailiwick, so to speak, correct? A Yes. I mean -- I mean, I could speak 17 Q So let me ask you generally, when the 17 idea is created to -- to create a task force, how 18 generally to funding of task forces. I mean, 18 19 obviously depending on how much funding is 19 is it then implemented? 20 20 available and where people's level of interest in A We would go out to -- in general, and 21 21 this is -- since this was years before, it's going helps define what your future activities are. 22 to be a little bit of a different setup that I'm 22 Q No, but I -- I understand that. But my 23 not going to be aware of, but we would go out to 23 question is, if I were to ask you specific 24 committees where we think there might be interest, 24 questions about the funding of the talc task 25 we would try to spread the word as widely as we force, that is not your bailiwick.

83 (Pages 704 to 707)

Page 708 Page 710 1 A That was Mark Pollack. 1 Q Well, as you -- as you said in your --2 Q Right. And so were you -- were you ever 2 your testimony just earlier today, the -- you see 3 3 shown the -- the chart that Mr. Pollack created this -- whether it was the Henderson study or what 4 4 you said was that asbestos was found in the talc, for us where -- for this litigation which 5 5 identifies how much was deposited into the account that the -- the CFTA then went to its members to 6 of the Talc Interested Party Task Force over the 6 determine the level of interest for a task force, 7 7 correct? vears? 8 8 A I think I've seen that, yes. A I said that --9 Q Okay. And so that was somewhere close 9 MR. LOCKE: Objection. 10 10 to half a million dollars, correct? THE WITNESS: Yeah, I said that's how 11 A I mean that -- that sounds about right. 11 generally it works. I mean, I'm not sure exactly 12 Q And about 67 percent of that was funded 12 how that happened. But, yes, we -- we would want 13 specifically by J&J and Imerys and the 13 to inform our members, because that's one of the 14 predecessors of Imerys, correct? 14 things we do, inform them what issues might be 15 15 A That's what I heard this morning, yes, related to them, and then we would generally 16 and that sounds right, consistent. 16 spread the word, is there interest, is there 17 Q And I think you said something -- that 17 something that, you know, we should form a task 18 there were something like 18 or 20 different 18 force for. So I assume that's the way it went 19 members of the task force. 19 there basically. 20 A I'm not sure there's -- I don't think 20 BY MR. GOLOMB: 21 there was more than that, but there was probably 21 Q And people you think may be interested 22 22 are then in some form or fashion contacted? close to that. Fifteen. 23 Q All right. And so the other 16 or so 23 A Well, we would contact -- now -- now 24 members of the task force put up a third of the 24 certainly -- again, things were a little different 25 funding, and Imerys and J&J put up the balance? 25 back then, but now we would contact through our Page 709 Page 711 1 A That -- that could be. 1 committees. We have a Safety and Regulatory 2 2 Q Okay. And once the task force is -- is Toxicology Committee. It's a very large committee 3 created, what happens next? 3 with a very large mailing list, so that gets to a 4 4 A Well, I mean, then they would get lot of people. We have a Scientific Advisory 5 5 together and talk about it, and what activities do Executive Committee now, it now has a different 6 we undertake, what do we understand about this, 6 name, but -- and again, there would be more people 7 7 what questions, is there -- you know, what we would contact. So we would make sure we spread 8 8 follow-up is needed to understand what the issue the word because we're just trying to make sure 9 9 everybody knows what's going on and see if they is, and where do we go from here. And then if it 10 comes to things that cost money, then it was like 10 have interest. 11 11 going out and getting proposals or -- and seeing Q And then at some point, whether it's 12 what people want to do. 12 1971 or the way you do it now, once you assess 13 those responses, you have a meeting of some sort, 13 Q Okay. And what happened in this case, 14 in the case of the Talc Interested Party Task 14 whether it's in person or telephone. Correct? 15 15 Force? When -- when was it first discussed A Generally, right, we -- then once we had 16 16 amongst its members? identified interested people, then we would want 17 17 A Are you talking about 1971 when it was to get that group together. 18 Q Okay. And then the -- those interested 18 first formed? 19 parties are identified, some employees of the CFTA 19 Q Well, if that's when it was. 20 20 at the time are then kind of the ones in charge of A I mean, then there were discussions 21 21 ongoing about asbestos, and we need methodologies having that liaison with the members on that 22 22 particular task force, correct? so we can detect if there's asbestos in talc, 23 and -- and there was a great deal of activity 23 MR. LOCKE: Objection.

84 (Pages 708 to 711)

THE WITNESS: Yes. Somebody -- somebody

would -- from the association would be involved.

24

25

24

25

well.

related to that, which included FDA activities as

Page 714 Page 712 Q Okay. I'm showing you Exhibit 80, which 1 BY MR. GOLOMB: 1 2 Q Okay. And when this -- when this task 2 is the cover page of those minutes. 3 3 Take -- take whatever time you need just force was first created, who was that person from 4 4 the CFTA? to read that. 5 5 A I believe it was -- at the time I think A (Peruses document.) Okay. б 6 Q Okay. Now, when you have a -- a task we only had one science person, so it was Norm 7 7 force like this, is somebody appointed as a -- as 8 8 a chairman of sorts of the committee? Q I'm sorry? 9 A Norm Estrin, I believe. 9 A It depends. Sometimes yes, sometimes 10 O And then there was -- there was in some 10 no. 11 form or fashion a meeting held of the prospective 11 Q What does it depend on? A The nature of the committee, the people 12 interested parties? 12 13 A Yes. I mean, I looked at a lot -- a lot 13 who are on it. Q Okay. And do you recall in -- in this 14 of minutes and there were a lot of meetings held. 14 15 Q Okay. Did you see minutes from the -particular case whether or not a chairman was 15 16 from back -- dating back to 1971? 16 nominated and then agreed to? 17 A I don't know about '71. 17 A You know, I recall in the case of going 18 O Well, when was the first --18 back to the '70s when the specifications was going A I saw them back to the '70s. 19 on, I think there was a chair for that effort 19 20 Q Okay. Because I'll represent to you 20 around developing methodology. I think there was 21 that the first meeting minutes that we have which 21 also a chair on kind of the more overarching talc, 22 refers to the, quote, ad hoc talc task force is 22 not the -- I know I'm not answering your question. I'm just trying to think here. 2.3 1982. 23 24 Were there minutes before that? 24 Do I recall if there was one here? I 25 A I know I saw documents relating to 25 guess I'd have to say I don't recall. Page 713 Page 715 working on specifications. I thought they were 1 1 Q Okay. Is it -- is it consistent with minutes. Maybe I'm wrong, but I know I saw 2 2 your recollection that there was maybe some 3 documents relating to that. 3 activity surrounding the asbestos issue in 1971, 4 and then no longer activity until 1982, when the 4 Q Okay. And the date of the first task 5 5 force minutes, which I'll show you in a minute, Cramer study came out? 6 are dated November 11th, 1982. Do you recall 6 MR. LOCKE: Objection. 7 7 seeing minutes from November 11th, 1982? THE WITNESS: No, there was activity in 8 the '70s relating to the asbestos and development 8 A I wouldn't recall a precise date. I 9 9 of -- of methodology that went well into the '70s. know that there were minutes going into the '80s, 10 and that would have been after the Cramer study. 10 BY MR. GOLOMB: Q Okay. And would there have been various 11 11 12 12 meetings in the '70s, whether they were by Q Right. And that's -- that was my next 13 question. That is a date which coincides shortly 13 telephone or in person? 14 after the Cramer study. 14 A I believe that's correct, yes. 15 A Okay. 15 Q And are -- whether the meeting is held by telephone or in person, are there minutes of 16 Q So is that consistent with your 16 17 recollection that there was minutes of the ad hoc 17 those meetings? A Again, I'm -- I mean, I've seen things 18 talc task force shortly after the Cramer study was 18 on developments of them. Were they minutes or 19 published? 19 20 20 were they otherwise memos? Off the top, I don't A I know that there was definitely -- that 21 the task force got together after the Cramer study 21 know. I thought they were minutes. I could be 22 was published, yes. 22 wrong. 23 (Exhibit No. 80 was marked for 23 Q Okay. And was a -- was a chairman of 24 24 identification.) this particular committee appointed before 25 BY MR. GOLOMB: 25 November 11th, 1982?

85 (Pages 712 to 715)

Page 718 Page 716 1 A Well, if there's a chairman appointed on 1 A Yes. 2 the asbestos -- on the earlier work, that doesn't 2 Q All right. And you -- you told us 3 3 mean that would be the same chairman in 1982. earlier that you read the various minutes of this 4 4 committee to prepare for your deposition, correct? Q Okay. And do you know who Dr. Bruce 5 A I read some minutes from this committee, 5 Semple is? 6 б yes, or this task force. A I think I've heard the name. He's at --7 I want to say P&G. 7 Q All right. And generally -- I'm sorry? 8 8 A Task force, I guess we call it. Q I'm sorry? 9 A I want to say Procter & Gamble, but I 9 Q Right. And generally, what was the goal 10 could be wrong. 10 of the task force back in November of 1982? 11 Q Okay. Well --11 A Well, I think just from the minutes, it 12 A Only because I've seen the name. I 12 was -- the concern was the ovarian cancer issue, 13 don't believe I've met the person because that 13 just given that the study had come out, the Cramer study. And I know in minutes I've seen, and this 14 would have been too long ago. 14 Q If I told you there's a document that refers to them, a thought of doing a study to look 15 15 16 says: "On November 11, 1982, nominations were 16 at translocation. So I think that was certainly 17 taken from the committee to elect a chairman. 17 one of the big discussion points. 18 After discussion, the task force agreed to elect a 18 Q Okay. And when you say "look at 19 19 translocation," what do you mean? chairman and a vice-chairman. Dr. Bruce Semple 20 from Johnson & Johnson was unanimously elected 20 A Trans -- talc can translocate from the 21 chairman. Dr. Edward Jackson from Knoxville was 21 perineum to the ovary. 22 22 Q Okay. And what was -- what was done by unanimously elected vice-chairman." 23 Would that refresh your recollection? 23 the CFTA back in 1982 in conjunction with the task 24 MR. LOCKE: Objection. Let the record 24 force to address that issue? 25 reflect that counsel is reading from pages that 25 A So there were -- I think it was actually Page 717 Page 719 1 have not been shown to the witness, probably of 1 two studies, although I think one was kind of a 2 the very same minutes that we're seeing the cover 2 beginner study leading to a bigger study with 3 3 monkeys using radio tracers, I think three page of. 4 4 BY MR. GOLOMB: different radio tracers, that was implanted in the 5 5 Q I will refer you to page 2, subsection 4 monkey vaginas, and it was -- then it was assessed 6 under Administrative Chairman, and take a look at 6 whether they could -- the talc would translocate 7 7 that and tell me if I read that accurately. to the ovary. 8 8 A Yes, you read it accurately. Q Okay. And then what was done next by Q Thank you. 9 9 the task force or any of its members? 10 Who is H. Joseph Sekerke, Ph.D.? 10 A I -- I don't know what you mean. 11 A He is a -- was a CTFA employee 11 Q Well, do you know one way or the other 12 12 as to whether or not any of the members were then scientist. 13 Q Okay. So would he have been that person 13 sent out to go talk to Dr. Cramer about his -- his 14 that liaison that we discussed earlier of this 14 paper? 15 particular committee in 1982? 15 A I'm not sure. If you can show me 16 A I think that would be likely. 16 documents that can refresh my memory. Q Okay. And that's who these minutes were Q Well, I'm just asking you, based on your 17 17 signed by -- he just writes "Joe," Joe Sekerke. understanding as you sit here today whether or not 18 18 19 A It makes sense. I mean, it -- again, Dr. Semple went to go talk to Dr. Cramer? 19 20 the science staff was very small at that point, so 20 A I don't remember. I mean, I may well 21 21 that was up from one to two at least. So that have looked at those documents. I just don't 22 22 makes sense. remember. 23 Q Okay. And you mentioned that in -- in 23 O Okay. And what else in the 1980s did 24 1982, we agree that Dr. Semple was the chairman of 24 the task force do? 25 this committee, correct? 25 A 1980s -- sorry. I just need to think.

86 (Pages 716 to 719)

Page 720 Page 722 1 I -- I don't remember. I mean, I know 1 his paper was circulated to the members of the 2 that was the big study that was done. 2 task force before it was published? 3 3 Q I'm sorry. A I believe it was. 4 A That was the big study that was done. 4 Q Okay. And is it -- is it your -- your 5 5 Again, if you show me documents to refresh my experience that that is a -- is an ethical 6 memory, that would be --6 approach to the publication of a paper, to 7 Q All right. And is it fair to say that 7 circulate it to people who have a financial 8 whether it's the -- the Talc Interested Party Task 8 interest in the outcome of the paper before it's 9 9 Force or any other task force, that they don't published in a scientific journal? 10 10 necessarily meet on a regular basis, but they meet MR. LOCKE: Objection to form and beyond 11 kind of depending on the activity of the -- that 11 the scope. 12 12 would be interesting -- interested to the task THE WITNESS: What -- what we -- the 13 force? 13 comments that we're looking for are typos, 14 14 clarity. We can't question the conclusion of the A That is correct, particularly with the 15 authors, and when we're hiring ethical people, 15 task force. We have some standing committees that 16 16 they're not going to let us do that. meet regularly, but task force, almost by 17 17 definition, are responding to specific issues. BY MR. GOLOMB: 18 Q Okay. So do you know one way or on the 18 Q Okay. So then -- so you have -- you --19 19 other as to whether or not there was a meeting of the task force meets. They agree on an approach, 20 20 the task force between November 11th, 1982, and in this case the approach is to -- is to contact 21 September 16th of 1993, which I'll represent to 21 and retain Dr. Gross, give Dr. Gross kind of his 22 22 you is the -- I'm sorry -- February 2nd, 1993, marching orders of what he is going to do. He 23 23 which is -- I'll represent to you is the -- the goes out and does it. The -- the money is then 24 next minutes that we have? 24 funded by the task force comes from your 25 MR. LOCKE: Objection. 25 organization. It's then circulated, and you meet Page 721 Page 723 1 THE WITNESS: I -- I don't know. 1 to discuss the -- the -- what potential 2 BY MR. GOLOMB: 2 typographical errors. Is that your testimony? 3 Q All right. Do you know, based on your 3 MR. LOCKE: Objection to form. 4 recollection of your preparation for this 4 THE WITNESS: No, that wasn't my 5 5 deposition, as to whether or not there was testimony. I guess it would just be helpful if I 6 something that was going on between 1982 and 1992 6 could see the documents. 7 that would have interested the task force? 7 I mean, we -- when we -- when we hire a 8 A I mean, I think -- I think there were 8 consultant, yes, we do look at -- and there are 9 9 papers that were looked at, but I couldn't be more areas that we have -- industry has knowledge that 10 specific than that at this point. Again --10 a consultant may not. We're hiring -- for 11 Q Papers looked at by whom? 11 example, if we're hiring somebody who is an expert 12 A I think there may have been ovarian 12 epidemiologist, we can't question his epi---13 cancer papers that were looked at. But again, if 13 their epidemiology findings, but we may have more 14 you can show me something to -- to help my memory, 14 knowledge about how talc is used by a consumer, 15 that would be great, but -- I know there were big 15 how -- you know, questions about analysis of talc, 16 things going on in '93, but --16 purity of talc, mining, mineralogy. 17 Q Okay. And then as -- as you were 17 So we're reviewing it as -- with some questioned earlier today by Mr. Tisi, Dr. Gross 18 18 expertise, and as well as saying, you know, if we 19 was then hired in 1993, correct? 19 get a document back and we think there could be 20 A Was that '93? Yes. 20 more clarity, I mean, I think it's okay to say to 21 21 Q All right. And that's when he -- he an author, Could you clarify a little more what 22 published his meta-analysis, correct? 22 you mean here. 23 23 BY MR. GOLOMB: 24 24 Q Well, does the -- does the document --Q And do you know one way or the other as 25 to whether or not Dr. Gross's paper or draft of 25 once the -- once the draft from the outside expert

87 (Pages 720 to 723)

Page 724 Page 726 1 is -- is written, does that paper then go to the 1 A I -- I don't know. 2 CTFA or does it go to one of the members? 2 MR. LOCKE: Objection. 3 A Typically -- typically it would go -- if 3 BY MR. GOLOMB: 4 CTFA is the one, or PCPC, is arranging that, then 4 Q If you just read the second paragraph, 5 you'll see: "It has been proposed that we arrange 5 it would come back to us, and then we would 6 6 for Dr. Gross to publish his analysis." Do you distribute it to the task force. 7 Q Okay. Have you ever seen a situation 7 see that? 8 where an expert was hired and the draft went to an 8 A Yes. 9 industry member before it went to -- to the CTFA 9 Q And then the next sentence says: 10 10 and was circulated to its members? "Johnson & Johnson will arrange for preparation of a first draft, which will then be reviewed by the 11 A Only --11 12 task force." Correct? MR. LOCKE: Objection. 12 THE WITNESS: Only the one we talked 13 13 A Yes. 14 about this morning. 14 Q Okay. Is that the first time you've 15 BY MR. GOLOMB: ever seen anything like that where a member -- an 15 16 O Which one was that? 16 industry member gets the first draft of -- and 17 A The Huncharek/Muscat review. 17 then they circulate it? 18 Q Okay. Let me show you the next 18 MR. LOCKE: Objection. 19 MS. FRAZIER: Object to form. 19 document. THE WITNESS: Well, as I say, the one 20 MR. GOLOMB: This is Exhibit 81. 20 21 (Exhibit No. 81 was marked for 21 this morning would be the other one, but "will 22 22 identification.) arrange for the preparation," so I guess they're the interface with the consultant. And then it 23 BY MR. GOLOMB: 23 24 Q And for the record, this is a memorandum 24 will go to the task force. So I'm not sure if J&J 25 dated September 22nd, 1993, from Stephen Gettings, 25 is reviewing the draft. They're arranging for the Page 725 Page 727 1 Ph.D., to the Talc Interested Party Task Force. 1 draft to be prepared is how I'm reading this. BY MR. GOLOMB: 2 First of all, let me just ask you for 2 3 the record, Dr. Gettings was the director of 3 Q Okay. So that -- that's how you read toxicology at that time, correct? "Johnson & Johnson will arrange for a preparation 4 4 5 5 of a first draft"? A Yes. 6 Q And was there overlap between 6 A Probably, yeah. I don't -- I don't know 7 Dr. Gettings being the director of toxicology and 7 for sure. the time that you came to the CTFA? 8 8 Q So you don't -- as you sit here, you 9 A No. 9 don't know one way or the other as to whether 10 Q When did Dr. Gettings leave? 10 Johnson & Johnson received that first draft? A I -- well, I started in October of '97, 11 11 A No. 12 and he left soon before then. He had actually 12 Q And if so, you don't know what happened moved over to the legal department and was there to that first draft once it was reviewed by 13 13 14 very briefly, and then he moved on to -- he went 14 somebody at Johnson & Johnson and then circulated 15 to a member company. 15 amongst the task force members, correct? 16 Q And who replaced Dr. Gettings? 16 MS. FRAZIER: Object to form. A I did. MR. LOCKE: Objection. 17 17 Q All right. And so have you seen this 18 THE WITNESS: Yeah, I don't know if J&J 18 19 reviewed the draft, it went straight to the task 19 document before? A I don't know. I want to say I don't 20 20 21 21 think so. BY MR. GOLOMB: 22 Q Okay. So this is a CF -- CFTA document 22 Q Okay. And then it says if you -- quote in big -- in capital letters, bold: "If you DO dated September 22nd, 1993, and you did not see 23 23 NOT AGREE with this proposed course of action, 24 this in your preparation of now Day 3 of a 24 25 deposition? 25 please contact me by close of business, COB,

88 (Pages 724 to 727)

Page 730 Page 728 1 1 Monday, September 27th, 1993." Correct? gathers in some form or fashion, or maybe there's 2 A That's what it says, yes. 2 some leadership to the group, like Dr. Semple and 3 3 some others, that say, Okay, this is reasonable, Q And are you aware one way or the other 4 as to whether or not anybody objected to that? 4 go ahead, and then the -- the CTFA can you tell us 5 5 A No, I would not be aware. a check. 6 6 Q And is it generally the -- the role at A We do a contract, and we would be the 7 the CFTA at the time that they review any document 7 ones who would pay, yes. 8 8 before it's published? Q Okay. Have you ever seen a situation 9 9 MR. LOCKE: Objection. where the -- the industry member pays for it 10 10 THE WITNESS: I would say we -- we themselves? 11 generally review documents before they're 11 A Not in my experience, that's not how 12 published, yes. 12 it's worked. 13 BY MR. GOLOMB: 13 Q Okay. And why do you do it that way? 14 14 Why do you have -- why is the money deposited into Q Okay. And you told us one of the 15 reasons why you do that is to -- for grammatical 15 the CTFA, and then a check written from the CTFA 16 errors. Why else would you -- why else would the 16 to the expert, rather than the industry member pay 17 CFTA review publications of outside experts before 17 for it themselves? 18 they're published? 18 A Because it's multiple industry members. 19 19 A I guess, again, I would just say that So we're -- we're putting the industry resources 20 together, so we're the site where the money is there may be some expertise, some -- you know, 20 21 again, more knowledge of -- if somebody is writing 21 collected, and then we write one check to the 22 on talc, the industry knows best how it's used. 22 consultant. 23 23 If there is any question of how it's sourced, that Q Okay. Let me show you the next 24 kind of thing, whether it came up in this 24 document. 25 document, I don't know, but there are certain 25 This is 82. Page 729 Page 731 1 areas of expertise. Yeah, we're hiring them for 1 (Exhibit No. 82 was marked for 2 their epidemiology expertise. 2 identification.) 3 Q And do you -- do you know who it is that 3 BY MR. GOLOMB: 4 paid for Dr. Gross's report? Q Now, this is a letter from Dr. Alfred 4 5 5 A I believe we did. Wehner, correct? 6 Q When you say "we," you mean the PCPC? 6 A Yes. 7 A I'm sorry. PCPC, yes. 7 Q And it says it's cc'd to M. Chudkowski, 8 Q At the time CTFA? 8 correct? A Yes. 9 A Yes. 9 10 10 O Who is that? O And that would be out of money that is 11 deposited into the task force account? A Michael Chudkowski, he's a J&J person. 11 12 A Yes. That would be typical. 12 Q And is there a reason why Mr. Chudkowski 13 Q The PCPC or its predecessor CTFA was the sole member of the task force that was 13 14 wouldn't go out of pocket to pay for something 14 copied on a letter from Dr. Wehner to Dr. Gettings 15 like this, right? They would ask its members 15 in November of 1993? 16 first? 16 A I think I need to read it first. Q Okay. 17 A The activities of the interested 17 18 A (Peruses document.) parties, that's what they are -- that's what 18 19 "interested party" refers to, people who are 19 I don't know. I don't know if \$1400 was 20 willing to expend money, because you have to do 20 the whole amount, and this to me looks like this 21 that to get certain things done. 21 is not the way we normally do things. Normally, 22 Q Okay. And that so the -- the task force 22 the -- as I say, we pay them for an interested 23 members agree on a course of action, in this case 23 party. So I don't know why in this case J&J 24 24 the course of action was to hire Dr. Gross. was -- as asked being to pay. 25 Dr. Gross makes a proposal. The task force then 25 Q Okay. Let's be clear about this. Well,

89 (Pages 728 to 731)

Page 732 Page 734 1 first of all, based on the letter, J&J was not 1 the Hankinson study is. 2 asked to pay, correct? J&J volunteered to pay. 2 A I know that Dr. Hankinson was an author 3 on a couple of different studies. She was -- she A Right. 3 4 MR. LOCKE: Objection. Form. 4 was one of the coauthors on the Gertig study, but 5 BY MR. GOLOMB: 5 she was also a coauthor on the Houghton study. 6 Q Right. So it says: "While you" -- it 6 Q Okay. And which study -- if there was a 7 says: "I am enclosing" -- meaning Dr. Wehner, "I 7 minutes draft -- draft of the minutes from January 8 am enclosing Dr. Gross's invoice in the amount of 8 of 1994, do you know which Hankinson study it 9 \$1400 for his professional services and expenses. 9 would be referring to? 10 A I don't. I'm trying to think what year While you mentioned, and Mike Chudkowski 10 11 confirmed, that J&J would pay the costs for the 11 the Gertig study, and I'm -- I'm blanking on that. manuscript preparation, I believe it to be (Exhibit No. 83 was marked for 12 12 13 appropriate for BEC to submit the invoice to CTFA 13 identification.) because CTFA requested the job." Correct? 14 BY MR. GOLOMB: 14 A That's what it says. Q Okay. Let me show you the Talc 15 15 16 Q Right. So they are -- although J&J has Interested Party Task Force. Now, this is -- it 16 says "Draft Minutes." I'm not sure that we have 17 volunteered to pay the full costs, at least of 17 the final minutes, but it says "Draft Minutes," 18 that particular invoice, doctor -- Dr. Wehner is 18 19 suggesting that the -- that the check be cut by dated January 11th, 1994. 19 20 the intermediary, CTFA, rather than coming from 20 Have you seen this before? 21 Johnson & Johnson itself, correct? 21 A I -- I can't recall exactly which 22 MR. LOCKE: Objection. 22 minutes I've seen. If I read it, it might seem 23 THE WITNESS: He's saying he's 23 familiar, but... 24 submitting the invoice to CTFA. So he felt from 24 Q Okay. Did -- did you read what you 25 where he sat, it should come to CTFA. 25 thought were all of the minutes of the task force Page 733 Page 735 1 1 to prepare for your deposition? BY MR. GOLOMB: 2 Q The invoice? 2 A I read a lot of them. 3 A Because then he says he expects that 3 Q Okay. we're going -- that CTFA is going to forward the A This is why I thought Bruce Semple was 4 4 5 5 from Procter & Gamble because he moved over to it. invoice to J&J. 6 Q Well, it says: "When you forward the 6 I think -- I believe I did read these. invoice to J&J, please have them pay out the check 7 7 Q Okay. And attached to that, which is 8 to Alan Gross and send it to them directly." 8 Bates-stamped J&J 15618, which is the second 9 So J&J is paying directly. 9 page -- well, it's the second page of this 10 A That's what it says, yes. 10 exhibit. It's the third page of the full 11 Q Okay. And that's why that letter was document. The second page just saying 11 12 copied to Mr. Chudkowski, right, because --12 "Adjournment" and the signature of Steve Gettings. Do you see it says "Draft" on the next 13 13 14 Q -- he is with J&J, and J&J volunteered 14 page? 15 15 A I'm sorry. Oh, yes, it says "Draft." to pay. 16 Q First of all, how were -- how were these 16 A Correct. So this is not, I would say, minutes created? Why -- why are there draft 17 the usual way that we pay. 17 Q In fact, you've never seen it done that 18 18 way before or since, correct? 19 19 A Again, this is before my time. I can 20 MR. LOCKE: Objection. 20 tell you how we do it now, but I think it was the 21 21 THE WITNESS: I think that's true. same then, is generally someone would draft 22 BY MR. GOLOMB: 22 minutes, and then it would go out to the group so 23 Q Do you know what the Hankinson study is? 23 people could look, and if they said, You know, I 24 A What year does it refer to? remember this a little differently, or really you 24 25 Q Well, I'm just asking if you know what 25 should -- we talked about this too, and it doesn't

90 (Pages 732 to 735)

Page 736 Page 738 1 seem to be here. Just so members would have a 1 Q Okay. And do you know in this case how 2 chance to -- to input so that they were accurate. 2 the Hankinson study was identified? 3 3 Q Okay. And these minutes are dated A No, I don't. 4 January 11th, 1994. And if you look at page 2, 4 Q And then there was a conference -- some 5 one of the topics that was discussed was ovarian 5 sort of conversation or communication between the 6 cancer. Do you see that? 6 CTFA and the task force members about that study, 7 A Yes. 7 correct? 8 8 Q And it refers to the recent paper by A Yes. 9 Dr. Hankinson, correct? 9 Q And Mr. Chudkowski then agreed to 10 A Yes. 10 contact Dr. Gross, who had been hired and was in 11 Q And under paragraph 2, it says "M. 11 the process of drafting a -- essentially a report 12 Chudkowski." Again, Michael Chudkowski from J&J, 12 in defense of the -- the industry from the 13 correct? 13 Citizens Petition that was filed in 1993, correct? 14 A Yes. 14 A Yeah, I think that's right. He was 15 Q It says: "Agreed to contact Dr. Gross 15 doing a meta-analysis. So... 16 to discuss incorporation of the results of the 16 Q Okay. And do -- are you aware one way 17 Hankinson study in his meta-analysis manuscript." 17 or the other as to whether or not there were any 18 Do you see that? 18 other studies that were published in that A Yes. 19 19 intervening time between the time that Dr. Gross 20 Q So in this case you have a -- what 20 was hired and the time that he finalized this 21 was -- what was Mr. Chudkowski's title at J&J? 21 report? 22 A Oh, I don't know. 22 A No, I'm not. 23 O Was he -- was he an executive of some 23 Q Okay. So you don't know one way or the 2.4 sort? 24 other as to whether or not there are other 25 A I don't know. I think he was a 25 reports, other papers other than the Hankinson Page 737 Page 739 1 1 scientist. I remember him being on phone calls, study, which in fact confirm the association 2 but I'm not sure I ever knew his title. 2 between talc and ovarian cancer; is that correct? 3 Q What kind of scientist was he? 3 MR. LOCKE: Objection. 4 A I just know he participated on technical 4 THE WITNESS: There's also -- there's 5 5 reference here to another study as well. phone calls, so... 6 Q All right. So a member of the -- an 6 BY MR. GOLOMB: 7 7 industry member of the task force saw -- how was Q Okay. Do you know one way or the other 8 8 as to whether or not that study confirms the the -- first of all -- strike that. 9 9 association between talc and ovarian cancer? How was the Hankinson study distributed 10 amongst the task force members? 10 Q Okay. Are you -- are you familiar with 11 A The fact that it says this 94TA03, 11 12 that's -- that was what we used to use, a system 12 the NTP inhalation study? 13 we used to use. We used to mail them out, so I --13 A Yes. 14 that would -- in '94, I think that would probably 14 Q And what did the NTP inhalation study conclude? 15 be correct, and we would number them accordingly 15 16 sequentially. 16 A It concluded that talc -- inhaled talc 17 Q Okay. So it would be somebody -- just 17 was carcinogenic to female rats, caused lung so we're clear on this, somebody from the CTFA in cancer. There was no evidence of carcinogenicity 18 18 their role as whatever they do at the CTFA, would 19 19 in male or female mice, and I believe it was 20 see the Hankinson study, and then the Hankinson 20 equivocal evidence in male rats. 21 study would be circulated to the members of the 21 Q Okay. And anything else? 22 task force? 22 A That they concluded? 23 A It could be that. It also could be a 23 O Yeah. 24 member bringing something to our attention that we 24 Well, that was the main point, I guess. 25 would circulate. 25 When was the last time you reviewed the

91 (Pages 736 to 739)

Page 742 Page 740 1 NTP inhalation study? 1 and ovarian cancer, correct? 2 A I didn't review the report. I reviewed 2 A That's about right. 3 3 Q Right. But this is a paper, the Gross assessments of it. 4 Q And did you review Dr. Gross's 4 paper was a paper that was where Dr. Gross was 5 5 assessment? specifically retained by industry members of the б 6 CF -- CTFA. That's a little bit different than A I don't believe so. 7 Q Okay. So just we're -- so we're clear, 7 those other 30 papers, would you agree? 8 that study was in the early '90s, correct? 8 A It is, yes. 9 A Yes. 9 Q Okay. And so are you -- are you telling 10 10 Q And it -- it may or may not have -- have us that you looked at the Gross paper, reading it had an effect on Dr. Gross's ultimate conclusions, quickly with the same care that you did with the 11 11 other more -- now more than 30 papers? 12 correct? 12 13 MR. LOCKE: Objection. 13 MR. LOCKE: Objection. If you have a THE WITNESS: I mean, I don't recall question about the Gross paper, ask the question. 14 14 15 It's not a memory test. If you want to give her 15 that it did because it's not ovarian cancer. 16 It's -- it's -- the NTP study is an inhalation, 16 the paper, go ahead. 17 and it had to do with lung cancer and it was 17 BY MR. GOLOMB: 18 discussed at length at the ISRTP. So, I'm not 18 Q Can you answer my question? 19 sure that -- Dr. Gross, I believe, was doing on 19 A Yeah, I'm happy to look at it, because 20 ovarian cancer. 20 again --21 BY MR. GOLOMB: 21 Q Well, it's not a memory test. I'm just 22 Q Okay. Is that something you're 22 trying to -- my question is a very specific one surmising, or is that something that you reviewed about the -- not about the content of the paper 2.3 23 24 from the records? 24 but about the care in which you read the paper. 25 A I'm trying to remember about Dr. Gross's 25 MR. LOCKE: What difference does it Page 741 Page 743 1 review, but those are two very separate issues, 1 make? 2 so --2 MR. GOLOMB: Well, that's rhetorical. 3 Q Okay. Well -- all right. Have you --3 THE WITNESS: Your question --MR. GOLOMB: I'm not here to answer you have -- prior to preparing for your 4 4 5 deposition, did you -- did you review the Gross 5 questions. 6 paper? 6 THE WITNESS: Your question, I thought, 7 A I reviewed -- I mean, by reviewed it --7 was about NTP bioassay, which was an inhalation 8 8 assay looking at where lung tumors were found. Q Read it. 9 A Read it quickly. I mean, there were 9 The Gross paper was about ovarian cancer. So I --10 drafts, and I -- I looked at it, and I -- I'm 10 I don't think it's in there, but if you want to 11 recalling them as being ovarian cancer. 11 show me the paper and -- where that was opined on 12 Q Okay. And did you read it in 12 as well, maybe it was. I -- I just don't 13 preparation for your deposition? 13 remember. 14 A I read it quickly. 14 BY MR. GOLOMB: Q Okay. When you say "read it quickly," 15 15 Q All right. Well, you -- you said, and what does that mean? when I refer to "you," I'm referring to the CTFA, 16 16 A I just mean there's a ton of papers out because you may not have been around at that 17 17 18 there, and I certainly am not claiming to -- as I 18 point. 19 sit here, that I read each and every one and could 19 A I wasn't. 20 recall the details of them. 20 Q But the -- the draft -- in answer to 21 Q Well, there's -- there's a ton of 21 Mr. Tisi's question earlier today, the draft of 22 papers, and I think we -- we've already talked 22 the -- the Gross paper was circulated amongst the 23 about the numbers. There are now in excess of 30 23 industry members of the CTFA, correct? 24 papers that were -- were written by -- by various A That's correct. 24 25 scientists to look at the association between talc 25 Q Right. And then it was reviewed by the

92 (Pages 740 to 743)

Page 744 Page 746 Q Okay. Well, we -- we've already --CTFA members, and the CTFA members then forwarded 1 1 2 comments. Correct? 2 we've already gone through and -- and have agreed 3 A I presume so. I didn't -- have not seen 3 that the consultant is hired, the consultant is 4 4 given marching orders on what to do, the those comments. 5 5 Q Okay. Let's take a look at the next consultant goes out and does it. The consultant 6 exhibit. 6 then circulates the paper, whether it goes 7 MR. LOCKE: Why don't we take a break. 7 directly to an industry member, as it did in this 8 8 We've been going for an hour and -case, or to the CTFA. It's then circulated to all MR. GOLOMB: Sure. 9 9 the industry members, they edit it. 10 MR. LOCKE: -- almost 50 minutes. I 10 Am I -- do I have it correct so far? 11 11 think we've got about 44 minutes left. MR. LOCKE: Objection to form. 12 MR. GOLOMB: Okay. 12 THE WITNESS: Well, I mean, they 13 THE VIDEOGRAPHER: The time is 4:38 p.m. 13 would -- I wouldn't say they edit it. They can 14 We're going off the record. 14 comment on it, and then CTFA -- generally the CTFA 15 (Recess.) liaison person or PCPC would compile comments, if 15 16 THE VIDEOGRAPHER: The time is 4:49 16 that makes sense. p.m., and we're back on the record. 17 17 BY MR. GOLOMB: 18 BY MR. GOLOMB: 18 Q Okay. And would those comments include 19 Q So we were -- we were talking about the 19 telling the scientists include this or don't NTP inhalation study. And correct me if I'm 20 20 include that? 21 wrong, you -- you testified that they -- as far as 21 A I mean, in general, no. I mean, if they 22 you know, there would be no reason for that study 22 left off a -- didn't include a paper, for example, 23 to be included in the paper and analyzed within 23 or something like that, it could be a -- you know, 24 the paper. 24 did you mean to exclude this paper or something 25 Am I summarizing your testimony 25 like that, but I -- but in general --Page 745 Page 747 1 correctly? 1 Q What about -- what about the other --2 A As I recall, the --2 the vice versa of that, where they included a 3 MR. LOCKE: Objection. 3 paper and would an industry member say, Huh-uh, 4 4 THE WITNESS: The Gross paper, because take that one out? 5 5 it dealt with ovarian, and the -- and the NTP was A Not -- I mean, not to better the 6 inhalation lung cancer issue. 6 results. You know, only if they included some 7 BY MR. GOLOMB: 7 topic that seemed really off topic. But, again, 8 8 we're choosing our consultants carefully, so we Q Okay. So then I assume that there 9 would -- then there wouldn't be any reason -- and 9 don't think that's going to happen. 10 based on what you told us before about kind of the 10 Q Okay. But if -- but if that did happen, 11 subjects, how subjects are treated within a paper, 11 that would be a problem, wouldn't it? 12 and typographical or grammatical errors are edited 12 A If something were like poorly written or 13 or whatnot, there wouldn't be any reason for an 13 something, I mean, you could see where, of course, 14 industry member to tell the scientists what to 14 you could have a comment, but then you would have 15 include in the paper, would there? 15 chosen your consultant wrong. 16 A You're talking about a consulting 16 Q Okay. But if -- if -- okay. And if -- but if the consultant was 17 scientist? 17 18 said -- told by an industry member, Include this 18 Q Yeah. A And would industry -- I mean, we would 19 but don't include that --19 20 obviously up front say, This is what we want you 20 21 to review. 21 Q -- you would see an ethical problem in 22 22 that if that happened? Q Right. 23 A Or whatever -- whatever they're 23 A Correct. I mean --24 preparing it on. So I'm not sure what you mean by 24 MR. LOCKE: Objection. Beyond the 25 tell them --25 scope.

93 (Pages 744 to 747)

Page 748 Page 750 THE WITNESS: Right. If they're looking 1 1 the FDA to see the results of an animal study? 2 at a topic, then they -- we would be hiring them 2 A Well, I think --3 for their expertise, and they would be selecting 3 MR. LOCKE: Same objection. 4 what -- what's relevant. 4 THE WITNESS: -- the FDA knows the 5 5 MR. GOLOMB: Okay. Can I have the next results of the animal study. That's not a 6 6 mystery. I think this is a publication, which document, please. 7 (Exhibit No. 84 was marked for 7 perhaps read poorly because it went over into 8 8 another totally different area. Nothing to do identification.) 9 BY MR. GOLOMB: 9 with ovarian cancer, nothing to do with 10 10 O This is Exhibit 84. epidemiology study. 11 This is a letter dated May 5th, 1994, 11 BY MR. GOLOMB: from Michael Chudkowski. Have you seen that 12 12 Q Okay. So you never talked to 13 letter before? 13 Mr. Chudkowski about this, correct? 14 A I don't think so. A No. 14 Q So this is a letter on Johnson & Johnson 15 Q And you've never talked to Dr. Gross 15 16 stationery dated May 4th, 1994, from Dr. Alan 16 about this? 17 Gross -- I mean to Dr. Alan Gross from --17 A No. 18 MS. FRAZIER: Do you have a copy of 18 Q So what -- you're surmising that they --19 he -- doctor -- Mr. Chudkowski wants to take the that? 19 20 (A discussion was held off the record.) 20 rodent study out of the paper because it's saving 21 BY MR. GOLOMB: 21 the FDA time --22 Q -- from Michael Chudkowski, manager of 22 MR. LOCKE: Object -preclinical evaluations. Do you see that? 23 23 BY MR. GOLOMB: 24 A To Michael Chudkowski. 24 Q -- because they already know about it? 25 Q Do you see the signature line on the 25 MR. LOCKE: Objection. There's no Page 749 Page 751 1 bottom of the page? 1 evidence that CTFA saw this at this time. 2 A Yes, I do. 2 THE WITNESS: And I -- I mean, the Gross 3 Q Okay. So it's a letter from Chudkowski 3 paper is not -- I mean, it's being published in a journal. I -- I -- this is why I was asking 4 to Gross, correct? 4 5 5 because I was confused why two, so different A Yes. 6 Q And on the second full paragraph, it 6 topics were in the same paper, and it sounded like 7 7 says: "Prior to submission, however, please that was -- that it read that it would be better 8 delete any reference to the NTP inhalation studies 8 to have a focus of your paper. 9 conducted in rodents." 9 BY MR. GOLOMB: 10 Did I read that correctly? 10 Q Okay. So the -- but the -- but the Gross paper is being sent to the FDA, and Mr. Tisi A You did. And the reason for that would 11 11 12 be this is a paper -- this is exactly what I was 12 went through it in great detail this morning, went saying, that it's on ovarian cancer and talc to the -- to the FDA to defend the industry 13 13 14 exposure, that's humans. Apparently he included 14 members against the Citizens Petition, which -an inhalation study in rodents. That's really off 15 15 which showed a -- which showed evidence of an topic. So it's probably -- it doesn't -- it's not 16 16 association between talc and ovarian cancer, relevant to the conclusion related to ovarian 17 17 correct? 18 18 cancer and talc exposure. MR. LOCKE: Objection. Q Well, so you're -- you're saying that 19 THE WITNESS: I'm not aware the Gross 19 paper went to the FDA. That was the Huncharek and 20 only the clinical aspect would be relevant to, in 20 this case, the FDA who is looking at a -- at a 21 21 Muscat document. 22 Citizens Petition rather than some animal study? 22 BY MR. GOLOMB: Q Okay. What was the purpose of the 23 MR. LOCKE: Objection. Form. 23 24 Gross --BY MR. GOLOMB: 24 25 Q You don't think it would be relevant for A This was -- this was a publication. It

Linda Loretz, Ph.D.

	Page 756		Page 758
1	MR. LOCKE: Objection.	1	record. Completing today's videotaped session.
2	THE WITNESS: That's how I would read	2	(Whereupon, the deposition of
3	it.	3	LINDA LORETZ, Ph.D. was adjourned
4	BY MR. GOLOMB:	4	at 5:03 p.m.)
5	Q Have you seen this document before?	5	ut 2.00 p.m.)
6	A I don't know. I really need to see the	6	
7	attachment.	7	
8	Q Okay. I'm sorry, but I don't have	8	
9	copies of the attachment, but here's the draft.	9	
10	A (Peruses document.) Okay.	10	
	· · · · · · · · · · · · · · · · · · ·	l .	
11	MR. LOCKE: Since it's a J&J document,	11	
12	I'd like to send it down to their counsel just to	12	
13	see.	13	
14	BY MR. GOLOMB:	14	
15	Q It's a just to be clear, it's a	15	
16	you've now had an opportunity to see that draft,	16	
17	correct?	17	
18	A Yes.	18	
19	Q And have you seen that before?	19	
20	A I'm not sure.	20	
21	Q Okay. Did you see the the cover	21	
22	memorandum before?	22	
23	A If I had seen the cover, I would have	23	
24	seen the document, so I think I'm saying	24	
25	Q Okay. And so	25	
	Page 757		Page 759
1	A probably not, as I recall.	1	CERTIFICATE OF CERTIFIED SHORTHAND REPORTER
2	Q So to be clear, in response to what	2	The undersigned Certified Shorthand Reporter
3	· •	3	does hereby certify:
4	Mr. Locke just said, the draft is a and the	4	That the foregoing proceeding was taken before
	memorandum is a document which was produced by	5	me at the time and place therein set forth, at
5	J&J, but it's a document on CTFA letterhead,	6	_
6	correct?		which time the witness was duly sworn; That the
7	A Yes.	7	testimony of the witness and all objections made
8	Q Okay. But you haven't seen that before?	8	at the time of the examination were recorded
9	MR. LOCKE: Well, wait.	9	stenographically by me and were thereafter
10	BY MR. GOLOMB:	10	transcribed, said transcript being a true and
11	Q That you can recall as you sit here.	11	correct copy of my shorthand notes thereof; That

#### Memorandum of Meeting

Date: May 8, 2009

Place: FDA, University Station Building, College Park, MD

#### Participants:

Visitors:

John Bailey, Ph.D., Personal Care Products Council Linda Loretz, Ph.D., Personal Care Products Council Kathleen Wille, Ph.D., Johnson & Johnson David Mallon, Unilever Craig Bernard, Ph.D., Rio Tinto Minerals (via telephone) Jack Linard, Ph.D., Unilever (via telephone) Shripal Sharma, Rio Tinto Minerals (via telephone)

#### FDA:

Linda Katz, M.D., M.P.H., Meeting Chair Joshua Sharfstein, M.D.
Stephen Sundlof, D.V.M., Ph.D.
Robert Bronaugh, Ph.D.
Patricia Hansen, Ph.D.
Stanley Milstein, Ph.D.
Donald Havery
John Gasper, Minutes
Diego Rua, Ph.D.
Patrick McCarthy, Ph.D.

Subject: Talc

The meeting was held at the request of the Personal Care Products Council (PCPC). PCPC expressed their commitment to working with FDA on issues concerning cosmetic products containing talc. PCPC and the representatives of individual firms presented an analysis of the epidemiological association of cosmetic talc use with ovarian cancer, information regarding chemical and physical properties they believe differentiate cosmetic grade talc from other grades of talc, and different specifications used. FDA representatives indicated that they would like to see more detailed information on the chemical and physical properties of cosmetic grade talc, characterization and testing of cosmetic grade talc, commercial suppliers and users of cosmetic grade talc, and related information. Dr. Bailey of PCPC indicated that it might take some time to assemble all of the information, but that he would check with the members and get back to Dr. Katz on the timing. FDA representatives also indicated that if PCPC wished the Agency to consider the information in responding to citizen petitions, it should submit the information to the appropriate dockets. PCPC also indicated that they would consider

different mechanisms for strengthening the guidelines and procedures meant to assure the safety of talc used in cosmetics.

#### **Action Items:**

- o Dr. Bailey to forward PCPC's expected responses to FDA questions (see attached) as soon as possible in 2 weeks. Additionally, PCPC will provide a list of talc suppliers along with their contact information.
- PCPC agreed to submit their prepared comments on: Citizen Petition to the Commissioner of the Food and Drug Administration Seeking a Cancer Warning on Talc Products to the docket.

#### Talc and ovarian cancer

Steven A. Narod \*

Women's College Research Institute, Toronto, Ontario, Canada Dalla Lana School of Public Health, University of Toronto, Toronto, Ontario, Canada

#### HIGHLIGHTS

- Talc use has been linked to the risk of ovarian cancer in many case-control studies.
- · Genital talc use is much less common now than it was in earlier cohorts of women in North America.
- It is not possible to say that any specific case of ovarian cancer was the result of talc use.

Keywords: Talc Ovarian cancer

Interest in a possible link between talcum powder and ovarian cancer risk dates back to the 1960s when the public was concerned about asbestos contamination in talc. Talc has been in the news intermittently since then, but the story of talc and ovarian cancer made the front page in February 2016, when the family of an ovarian cancer patient successfully sued Johnson and Johnson for 72 million dollars. This surprising jury decision raises a few questions. Is there a real and robust statistical association between talc use and ovarian cancer, and if so, is the association causal or due to confounding? What is the risk of cancer associated with talc use and how do we tell if a particular case of ovarian cancer was caused by talc? What should we tell our patients?

Most of the evidence comes from case-control studies. In 2013, the Ovarian Cancer Association Consortium pooled eight of these and analysed 8525 cases and 9859 controls [1]. They reported that genital powder use was associated with a modest but significant increased risk of epithelial ovarian cancer (OR = 1.24; 95% CI 1.15–1.33). The association between talc and ovarian cancer was significant in five of the eight individual studies. More recently, Cramer et al. studied 2041 cases and 2100 controls (some of whom were included in the OCAC study) [2]. They

E-mail address: steven.narod@wchospital.ca.

estimated the risk of ovarian cancer associated with genital talc use to be 1.33 (95% CI 1.16 to 1.52) The case-control studies to date are consistent; given the small effect size it is not surprising that some are positive (i.e., show a significant increase in risk) and some are negative (i.e., show a non-significant increase in risk or no risk difference). Some say, based on this data, that there is little or no evidence that talc is associated with ovarian cancer. This is a conservative opinion, based on an uncompromising interpretation of statistics and a demand for proof. For the sake of argument, let us suppose that the true risk ratio for ever use of talc and the development of ovarian cancer is 1.2. This estimate is the one generated from the large pooling study [1] and is the level of risk that is under discussion the media. It is possible that the true risk might be lower or higher than this single estimate. In this scenario, where talc increases the risk of ovarian cancer by 20% beyond the baseline of 1.3% lifetime, it would be challenging to convince the epidemiology community that there is a danger. Simply put, a risk ratio of this size falls outside the resolution of most epidemiologic studies; for example, if we set the *p*-value for significance at 0.05, then, in order to have a power of 0.80 to discriminate an increase in risk of 20%, and if 20% of the population is exposed to talc, we would require a case-control study of 2801 cases and 2801 controls. This is a very large sample for a case-control study, especially given that ovarian cancer is rare and only but the large study of Cramer et al the pooled analyses of OCAC were designed to detect and odds ratios this small [1,2]. If the

2

magnitude of the association is to be estimated with precision it is important that consortia are develop and expanded in order to generate the appropriate sample size.

Prospective observational studies are less prone to bias than casecontrol studies, and for this reason they are given greater weight. In particular, they are not prone to recall bias (where the accuracy of the recollection of the exposure differs between cases and controls); selection bias (where the unexposed and exposed women are not equally likely to be ascertained for study) and survivorship bias (which would occur if the survival of women with ovarian cancer differs, depending on prior talc exposure. In the Nurses Health Study, 78,630 women were followed for a mean of 12.9 years [3]. There were 307 ovarian cancers diagnosed in the follow-up period. There was no overall association with ever-use of talc (HR = 1.09; 95% CI 0.86 to 1.37, but there was a modest and significant increased risk for serous ovarian cancer (HR = 1.40; 95% CI; 1.02-1.91). These figures could be dismissed as non-significant or as due to chance, but if the real risk were in fact 1.2, this is about what we would expect. In the Women's Health Initiative [4], 61,285 women were followed for an average of 12.4 years. 53% of the women reported perineal talc use (a very high proportion). The adjusted hazard ratio for serous ovarian cancer was 1.13, but this was not significant (95% CI 0.84 to 1.51). Neither prospective study confirmed the association of talc use and ovarian cancer raised by the case-control studies, but neither study was powered to detect a risk of 1.2 and therefore we cannot exclude the possibility. Only two women in a thousand will develop ovarian cancer in a ten-year follow up period. If we study 10,000 women over 10 years we can expect 20 cancers to occur. If the true odds ratio is 1.2, we will expect 20 cancers in an unexposed group of 10,000 women and 24 cancers in an exposed group of equal size and this difference will not be significant (p = 0.65). In order to achieve statistical significance in a prospective study, we need a much larger cohort, e.g., we will need to study upwards of 200,000 women for ten years.

Given this inherent limitation of cohort studies, it is not surprising that we have not been able to confirm the case-control studies with prospective studies, but this does not mean that the case-control studies were wrong. I don't think it is because the prospective studies are free from the biases that plague the case-control studies (e.g., recall bas) — I think the parsimonious explanation is that they lack statistical power. It is well that we also consider various possible biases as a source of imprecision in case-control studies. In the case of talc and ovarian cancer we should consider recall bias, survivorship bias and confounding bias. The idea behind recall bias is that a case is more likely to (correctly) recall the past use of talc than a control (who might forget) or that a case is more likely than a control to (incorrectly) report the use of talc that was never used. In studies where simple exposures that are coded as never/ ever use recall bias unlikely to be an important source of bias. Survivorship bias would occur if we used prevalent cases and the use of talc was associated with better or worse survival, once ovarian cancer develops. There is no reason to assume that this is the case.

Confounding bias may be more subtle. When people say that 'association is not causality' they mean to say that that talc may not actually cause ovarian cancer but both talc and ovarian cancer may be linked to a third factor such as birth control pills — perhaps women who use talc are less likely to use birth control pills and therefore form a high risk group. Hardly likely — and the other risk factors for ovarian cancer are parity, breast feeding and tubal ligation. None of these are a priori likely to be confounders and in any case, most case-control studies will adjust for these. The most important potential confounder is year of birth (see below) and it is critical to control for this. It is unlikely that the association between talc and ovarian cancer is due to confounding and so it is fair to say that if there is a statistically robust relationship between talc use and ovarian cancer it is likely to be causal (albeit with intermediate factors such as inflammation). In any case, given the number of hazard ratios reported in the literature between 1.1 of 1.4 in both case-control and cohort studies, it is disingenuous to state that there is no evidence that talc is associated with ovarian cancer.

It has been suggested that talc passes through the cervix and endometrium and becomes lodged in the fallopian tube where it induces an inflammatory reaction [5]. This is hypothetical, but is supported by the observation of talc particles within the pelvic organs [6] and fits with the paradigm that most serous ovarian cancers originate in the fallopian tube and that intra-epithelial lesions in the fallopian epithelium are the earliest manifestations of an impending ovarian cancer [7]. If the model is correct, it is possible that the passage of talc is aided by retrograde menses and that talc use during menses poses a special risk. This might explain in part why the association between talc applied to sanitary napkins and ovarian cancer is among the most consistent. Against the model is the observation that, in the prospective studies, the relative risk of cancer associated with talc was not lower in women who had a tubal ligation [3,4] (and presumably had blocked access to talc).

If we accept that the actual hazard ratio for ever-use versus neveruse is 1.2 how are we to interpret this number? If we consider a particular woman who uses talc regularly, her lifetime risk of ovarian cancer would increase from about 1.3% to 1.6%, an increase of 0.3% or three cases in a thousand. On a yearly scale, the risk rises from 20 per 100,000 women per year to 24 per 100,000 per year or four cancer cases for every 100,000 talc users. The latter might strike as more favorable, but, in fact describes the same risk. If we consider the population as a whole, the total number of ovarian cancer cases caused by talc depends on the frequency of talc use in the population. It is right to be concerned over the carcinogenicity of talc even if the risk ratio is low, because up to 50% of women are exposed [1]. If 40% of women use talc and the relative risk is 1.2, then 7% of ovarian cancer cases would be attributable to talc use or 1577 cases a year in the USA. This is not a trivial number and should not be dismissed. If 20% of women were talc users the number of cases per year would be 819. If only 5% of women use talc then the number of cases per year would be 211. Few perhaps, but if ovarian cancer is avoidable, it is best avoided. Is there a downside? Talc affords comfort and was used commonly in the past to control moisture and odor but women have many more choices nowadays. One could of course make a recommendation here not to use talc on sanitary napkins, but this will have little impact because few women continue to use it. In our database of 6000 women from North America that we follow at Women's College Hospital, the use of talc on sanitary napkins has declined precipitously from one generation to the next; talc use was recorded by 11% for women born from 1920 to 1940, but for only 1% of women born after 1975. Similarly, the use of talc applied directly to the genital area fell from 19% to 3% over the same period.

In the interests of public health, I believe we should caution women against using genital talcum powder. However, this policy of talc avoidance is unlikely to have much impact nowadays given this downward trend in usage. I don't think we should try to ascribe any particular case of ovarian cancer to prior talc use. The estimate of a risk ratio of 1.2 provides information about the potential contribution of talc to the burden of ovarian cancer in the population, but is not helpful in determining if a specific case is, or is not, the result of talc exposure. Are we able to make helpful recommendations for women who have used it in the past but who no longer use it? Probably not, we do not offer preventive surgery for women with a risk of ovarian cancer that is less than 2% and screening with CA125 or ultrasound is not recommended to women at average or slightly increased risk.

#### Moving to a World Beyond "p < 0.05"

Some of you exploring this special issue of *The American Statistician* might be wondering if it's a scolding from pedantic statisticians lecturing you about what *not* to do with *p*-values, without offering any real ideas of what *to do* about the very hard problem of separating signal from noise in data and making decisions under uncertainty. Fear not. In this issue, thanks to 43 innovative and thought-provoking papers from forward-looking statisticians, help is on the way.

#### 1. "Don't" Is Not Enough

There's not much we can say here about the perils of *p*-values and significance testing that hasn't been said already for decades (Ziliak and McCloskey 2008; Hubbard 2016). If you're just arriving to the debate, here's a sampling of what not to do:

- Don't base your conclusions solely on whether an association or effect was found to be "statistically significant" (i.e., the p-value passed some arbitrary threshold such as p < 0.05).
- Don't believe that an association or effect exists just because it was statistically significant.
- Don't believe that an association or effect is absent just because it was not statistically significant.
- Don't believe that your p-value gives the probability that chance alone produced the observed association or effect or the probability that your test hypothesis is true.
- Don't conclude anything about scientific or practical importance based on statistical significance (or lack thereof).

Don't. Don't. Just...don't. Yes, we talk a lot about don'ts. The ASA Statement on p-Values and Statistical Significance (Wasserstein and Lazar 2016) was developed primarily because after decades, warnings about the don'ts had gone mostly unheeded. The statement was about what not to do, because there is widespread agreement about the don'ts.

Knowing what not to do with *p*-values is indeed necessary, but it does not suffice. It is as though statisticians were asking users of statistics to tear out the beams and struts holding up the edifice of modern scientific research without offering solid construction materials to replace them. Pointing out old, rotting timbers was a good start, but now we need more.

Recognizing this, in October 2017, the American Statistical Association (ASA) held the Symposium on Statistical Inference, a two-day gathering that laid the foundations for this

special issue of *The American Statistician*. Authors were explicitly instructed to develop papers for the variety of audiences interested in these topics. If you use statistics in research, business, or policymaking but are not a statistician, these articles were indeed written with YOU in mind. And if you are a statistician, there is still much here for you as well.

The papers in this issue propose many new ideas, ideas that in our determination as editors merited publication to enable broader consideration and debate. The ideas in this editorial are likewise open to debate. They are our own attempt to distill the wisdom of the many voices in this issue into an essence of good statistical practice as we currently see it: some do's for teaching, doing research, and informing decisions.

Yet the voices in the 43 papers in this issue do not sing as one. At times in this editorial and the papers you'll hear deep dissonance, the echoes of "statistics wars" still simmering today (Mayo 2018). At other times you'll hear melodies wrapping in a rich counterpoint that may herald an increasingly harmonious new era of statistics. To us, these are all the sounds of statistical inference in the 21st century, the sounds of a world learning to venture beyond "p < 0.05."

This is a world where researchers are free to treat "p=0.051" and "p=0.049" as not being categorically different, where authors no longer find themselves constrained to selectively publish their results based on a single magic number. In this world, where studies with "p<0.05" and studies with "p>0.05" are not automatically in conflict, researchers will see their results more easily replicated—and, even when not, they will better understand *why*. As we venture down this path, we will begin to see fewer false alarms, fewer overlooked discoveries, and the development of more customized statistical strategies. Researchers will be free to communicate all their findings in all their glorious uncertainty, knowing their work is to be judged by the quality and effective communication of their science, and not by their p-values. As "statistical significance" is used less, statistical thinking will be used more.

The ASA Statement on P-Values and Statistical Significance started moving us toward this world. As of the date of publication of this special issue, the statement has been viewed over 294,000 times and cited over 1700 times—an average of about 11 citations per week since its release. Now we must go further. That's what this special issue of *The American Statistician* sets out to do.

To get to the do's, though, we must begin with one more don't.

#### 2. Don't Say "Statistically Significant"

The ASA Statement on P-Values and Statistical Significance stopped just short of recommending that declarations of "statistical significance" be abandoned. We take that step here. We conclude, based on our review of the articles in this special issue and the broader literature, that it is time to stop using the term "statistically significant" entirely. Nor should variants such as "significantly different," "p < 0.05," and "nonsignificant" survive, whether expressed in words, by asterisks in a table, or in some other way.

Regardless of whether it was ever useful, a declaration of "statistical significance" has today become meaningless. Made broadly known by Fisher's use of the phrase (1925), Edgeworth's (1885) original intention for statistical significance was simply as a tool to indicate when a result warrants further scrutiny. But that idea has been irretrievably lost. Statistical significance was never meant to imply scientific importance, and the confusion of the two was decried soon after its widespread use (Boring 1919). Yet a full century later the confusion persists.

And so the tool has become the tyrant. The problem is not simply use of the word "significant," although the statistical and ordinary language meanings of the word are indeed now hopelessly confused (Ghose 2013); the term should be avoided for that reason alone. The problem is a larger one, however: using bright-line rules for justifying scientific claims or conclusions can lead to erroneous beliefs and poor decision making (ASA statement, Principle 3). A label of statistical significance adds nothing to what is already conveyed by the value of p; in fact, this dichotomization of p-values makes matters worse.

For example, no *p*-value can reveal the plausibility, presence, truth, or importance of an association or effect. Therefore, a label of statistical significance does not mean or imply that an association or effect is highly probable, real, true, or important. Nor does a label of statistical nonsignificance lead to the association or effect being improbable, absent, false, or unimportant. Yet the dichotomization into "significant" and "not significant" is taken as an imprimatur of authority on these characteristics. In a world without bright lines, on the other hand, it becomes untenable to assert dramatic differences in interpretation from inconsequential differences in estimates. As Gelman and Stern (2006) famously observed, the difference between "significant" and "not significant" is not itself statistically significant.

Furthermore, this false split into "worthy" and "unworthy" results leads to the selective reporting and publishing of results based on their statistical significance—the so-called "file drawer problem" (Rosenthal 1979). And the dichotomized reporting problem extends beyond just publication, notes Amrhein, Trafimow, and Greenland (2019): when authors use p-value thresholds to select which findings to discuss in their papers, "their conclusions and what is reported in subsequent news and reviews will be biased...Such selective attention based on study outcomes will therefore not only distort the literature but will slant published descriptions of study results—biasing the summary descriptions reported to practicing professionals and the general public." For the integrity of scientific publishing and research dissemination, therefore, whether a p-value passes any arbitrary threshold should not be considered at all when deciding which results to present or highlight.

To be clear, the problem is not that of having only two labels. Results should not be trichotomized, or indeed categorized into any number of groups, based on arbitrary *p*-value thresholds. Similarly, we need to stop using confidence intervals as another means of dichotomizing (based, on whether a null value falls within the interval). And, to preclude a reappearance of this problem elsewhere, we must not begin arbitrarily categorizing other statistical measures (such as Bayes factors).

Despite the limitations of p-values (as noted in Principles 5 and 6 of the ASA statement), however, we are not recommending that the calculation and use of continuous p-values be discontinued. Where p-values are used, they should be reported as continuous quantities (e.g., p=0.08). They should also be described in language stating what the value means in the scientific context. We believe that a reasonable prerequisite for reporting any p-value is the ability to interpret it appropriately. We say more about this in Section 3.3.

To move forward to a world beyond "p < 0.05," we must recognize afresh that statistical inference is not—and never has been—equivalent to scientific inference (Hubbard, Haig, and Parsa 2019; Ziliak 2019). However, looking to statistical significance for a marker of scientific observations' credibility has created a guise of equivalency. Moving beyond "statistical significance" opens researchers to the real significance of statistics, which is "the science of learning from data, and of measuring, controlling, and communicating uncertainty" (Davidian and Louis 2012).

In sum, "statistically significant"—don't say it and don't use it.

#### 3. There Are Many Do's

With the don'ts out of the way, we can finally discuss ideas for specific, positive, constructive actions. We have a massive list of them in the seventh section of this editorial! In that section, the authors of all the articles in this special issue each provide their own short set of do's. Those lists, and the rest of this editorial, will help you navigate the substantial collection of articles that follows.

Because of the size of this collection, we take the liberty here of distilling our readings of the articles into a summary of what can be done to move beyond "p < 0.05." You will find the rich details in the articles themselves.

What you will NOT find in this issue is one solution that majestically replaces the outsized role that statistical significance has come to play. The statistical community has not yet converged on a simple paradigm for the use of statistical inference in scientific research—and in fact it may never do so. A one-size-fits-all approach to statistical inference is an inappropriate expectation, even after the dust settles from our current remodeling of statistical practice (Tong 2019). Yet solid principles for the use of statistics do exist, and they are well explained in this special issue.

We summarize our recommendations in two sentences totaling seven words: "Accept uncertainty. Be thoughtful, open, and modest." Remember "ATOM."

#### 3.1. Accept Uncertainty

Uncertainty exists everywhere in research. And, just like with the frigid weather in a Wisconsin winter, there are those who will flee from it, trying to hide in warmer havens elsewhere. Others, however, accept and even delight in the omnipresent cold; these are the ones who buy the right gear and bravely take full advantage of all the wonders of a challenging climate. Significance tests and dichotomized p-values have turned many researchers into scientific snowbirds, trying to avoid dealing with uncertainty by escaping to a "happy place" where results are either statistically significant or not. In the real world, data provide a noisy signal. Variation, one of the causes of uncertainty, is everywhere. Exact replication is difficult to achieve. So it is time to get the right (statistical) gear and "move toward a greater acceptance of uncertainty and embracing of variation" (Gelman

Statistical methods do not rid data of their uncertainty. "Statistics," Gelman (2016) says, "is often sold as a sort of alchemy that transmutes randomness into certainty, an 'uncertainty laundering' that begins with data and concludes with success as measured by statistical significance." To accept uncertainty requires that we "treat statistical results as being much more incomplete and uncertain than is currently the norm" (Amrhein, Trafimow, and Greenland 2019). We must "countenance uncertainty in all statistical conclusions, seeking ways to quantify, visualize, and interpret the potential for error" (Calin-Jageman and Cumming 2019).

"Accept uncertainty and embrace variation in effects," advise McShane et al. in Section 7 of this editorial. "[W]e can learn much (indeed, more) about the world by forsaking the false promise of certainty offered by dichotomous declarations of truth or falsity—binary statements about there being 'an effect' or 'no effect'—based on some p-value or other statistical threshold being attained."

We can make acceptance of uncertainty more natural to our thinking by accompanying every point estimate in our research with a measure of its uncertainty such as a standard error or interval estimate. Reporting and interpreting point and interval estimates should be routine. However, simplistic use of confidence intervals as a measurement of uncertainty leads to the same bad outcomes as use of statistical significance (especially, a focus on whether such intervals include or exclude the "null hypothesis value"). Instead, Greenland (2019) and Amrhein, Trafimow, and Greenland (2019) encourage thinking of confidence intervals as "compatibility intervals," which use *p*-values to show the effect sizes that are most compatible with the data under the given model.

How will accepting uncertainty change anything? To begin, it will prompt us to seek better measures, more sensitive designs, and larger samples, all of which increase the rigor of research. It also helps us **be modest** (the fourth of our four principles, on which we will expand in Section 3.4) and encourages "metaanalytic thinking" (Cumming 2014). Accepting uncertainty as inevitable is a natural antidote to the seductive certainty falsely promised by statistical significance. With this new outlook, we will naturally seek out replications and the integration of evidence through meta-analyses, which usually requires point and interval estimates from contributing studies. This will in turn give us more precise overall estimates for our effects and associations. And this is what will lead to the best research-based guidance for practical decisions.

Accepting uncertainty leads us to be thoughtful, the second of our four principles.

#### 3.2. Be Thoughtful

What do we mean by this exhortation to "be thoughtful"? Researchers already clearly put much thought into their work. We are not accusing anyone of laziness. Rather, we are envisioning a sort of "statistical thoughtfulness." In this perspective, statistically thoughtful researchers begin above all else with clearly expressed objectives. They recognize when they are doing exploratory studies and when they are doing more rigidly pre-planned studies. They invest in producing solid data. They consider not one but a multitude of data analysis techniques. And they think about so much more.

#### 3.2.1. Thoughtfulness in the Big Picture

"[M]ost scientific research is exploratory in nature," Tong (2019) contends. "[T]he design, conduct, and analysis of a study are necessarily flexible, and must be open to the discovery of unexpected patterns that prompt new questions and hypotheses. In this context, statistical modeling can be exceedingly useful for elucidating patterns in the data, and researcher degrees of freedom can be helpful and even essential, though they still carry the risk of overfitting. The price of allowing this flexibility is that the validity of any resulting statistical inferences is undermined."

Calin-Jageman and Cumming (2019) caution that "in practice the dividing line between planned and exploratory research can be difficult to maintain. Indeed, exploratory findings have a slippery way of 'transforming' into planned findings as the research process progresses." At the bottom of that slippery slope one often finds results that don't reproduce.

Anderson (2019) proposes three questions thoughtful researchers asked thoughtful researchers evaluating research results: What are the practical implications of the estimate? How precise is the estimate? And is the model correctly specified? The latter question leads naturally to three more: Are the modeling assumptions understood? Are these assumptions valid? And do the key results hold up when other modeling choices are made? Anderson further notes, "Modeling assumptions (including all the choices from model specification to sample selection and the handling of data issues) should be sufficiently documented so independent parties can critique, and replicate, the work."

Drawing on archival research done at the Guinness Archives in Dublin, Ziliak (2019) emerges with ten "G-values" he believes we all wish to maximize in research. That is, we want large Gvalues, not small p-values. The ten principles of Ziliak's "Guinnessometrics" are derived primarily from his examination of experiments conducted by statistician William Sealy Gosset while working as Head Brewer for Guinness. Gosset took an economic approach to the logic of uncertainty, preferring balanced designs over random ones and estimation of gambles over bright-line "testing." Take, for example, Ziliak's G-value 10: "Consider purpose of the inquiry, and compare with best

practice," in the spirit of what farmers and brewers must do. The purpose is generally NOT to falsify a null hypothesis, says Ziliak. Ask what is at stake, he advises, and determine what magnitudes of change are humanly or scientifically meaningful in context.

Pogrow (2019) offers an approach based on practical benefit rather than statistical or practical significance. This approach is especially useful, he says, for assessing whether interventions in complex organizations (such as hospitals and schools) are effective, and also for increasing the likelihood that the observed benefits will replicate in subsequent research and in clinical practice. In this approach, "practical benefit" recognizes that reliance on small effect sizes can be as problematic as relying on p-values.

**Thoughtful research** prioritizes sound data production by putting energy into the careful planning, design, and execution of the study (Tong 2019).

Locascio (2019) urges researchers to be prepared for a new publishing model that evaluates their research based on the importance of the questions being asked and the methods used to answer them, rather than the outcomes obtained.

## 3.2.2. Thoughtfulness Through Context and Prior Knowledge

**Thoughtful research** considers the scientific context and prior evidence. In this regard, a declaration of statistical significance is the antithesis of thoughtfulness: it says nothing about practical importance, and it ignores what previous studies have contributed to our knowledge.

Thoughtful research looks ahead to prospective outcomes in the context of theory and previous research. Researchers would do well to ask, What do we already know, and how certain are we in what we know? And building on that and on the field's theory, what magnitudes of differences, odds ratios, or other effect sizes are practically important? These questions would naturally lead a researcher, for example, to use existing evidence from a literature review to identify specifically the findings that would be practically important for the key outcomes under study.

Thoughtful research includes careful consideration of the definition of a meaningful effect size. As a researcher you should communicate this up front, before data are collected and analyzed. Afterwards is just too late; it is dangerously easy to justify observed results after the fact and to overinterpret trivial effect sizes as being meaningful. Many authors in this special issue argue that consideration of the effect size and its "scientific meaningfulness" is essential for reliable inference (e.g., Blume et al. 2019; Betensky 2019). This concern is also addressed in the literature on equivalence testing (Wellek 2017).

**Thoughtful research** considers "related prior evidence, plausibility of mechanism, study design and data quality, real world costs and benefits, novelty of finding, and other factors that vary by research domain...without giving priority to *p*-values or other purely statistical measures" (McShane et al. 2019).

**Thoughtful researchers** "use a toolbox of statistical techniques, employ good judgment, and keep an eye on developments in statistical and data science," conclude Heck and Krueger (2019), who demonstrate how the *p*-value can be useful to researchers as a heuristic.

## 3.2.3. Thoughtful Alternatives and Complements to P-Values

**Thoughtful research** considers multiple approaches for solving problems. This special issue includes some ideas for supplementing or replacing *p*-values. Here is a short summary of some of them, with a few technical details:

Amrhein, Trafimow, and Greenland (2019) and Greenland (2019) advise that null p-values should be supplemented with a p-value from a test of a pre-specified alternative (such as a minimal important effect size). To reduce confusion with posterior probabilities and better portray evidential value, they further advise that p-values be transformed into s-values (Shannon information, surprisal, or binary logworth)  $s = -\log_2(p)$ . This measure of evidence affirms other arguments that the evidence against a hypothesis contained in the p-value is not nearly as strong as is believed by many researchers. The change of scale also moves users away from probability misinterpretations of the p-value.

Blume et al. (2019) offer a "second generation p-value (SGPV)," the characteristics of which mimic or improve upon those of *p*-values but take practical significance into account. The null hypothesis from which an SGPV is computed is a composite hypothesis representing a range of differences that would be practically or scientifically inconsequential, as in equivalence testing (Wellek 2017). This range is determined in advance by the experimenters. When the SGPV is 1, the data only support null hypotheses; when the SGPV is 0, the data are incompatible with any of the null hypotheses. SGPVs between 0 and 1 are inconclusive at varying levels (maximally inconclusive at or near SGPV = 0.5.) Blume et al. illustrate how the SGPV provides a straightforward and useful descriptive summary of the data. They argue that it eliminates the problem of how classical statistical significance does not imply scientific relevance, it lowers false discovery rates, and its conclusions are more likely to reproduce in subsequent studies.

The "analysis of credibility" (AnCred) is promoted by Matthews (2019). This approach takes account of both the width of the confidence interval and the location of its bounds when assessing weight of evidence. AnCred assesses the credibility of inferences based on the confidence interval by determining the level of prior evidence needed for a new finding to provide credible evidence for a nonzero effect. If this required level of prior evidence is supported by current knowledge and insight, Matthews calls the new result "credible evidence for a non-zero effect," irrespective of its statistical significance/nonsignificance.

Colquhoun (2019) proposes continuing the use of continuous *p*-values, but only in conjunction with the "false positive risk (FPR)." The FPR answers the question, "If you observe a 'significant' *p*-value after doing a single unbiased experiment, what is the probability that your result is a false positive?" It tells you what most people mistakenly still think the *p*-value does, Colquhoun says. The problem, however, is that to calculate the FPR you need to specify the prior probability that an effect is real, and it's rare to know this. Colquhoun suggests that the FPR could be calculated with a prior probability of 0.5, the largest value reasonable to assume in the absence of hard prior data. The FPR found this way is in a sense the minimum false positive risk (mFPR); less plausible hypotheses (prior probabilities below 0.5) would give even bigger FPRs, Colquhoun says, but the

mFPR would be a big improvement on reporting a *p*-value alone. He points out that p-values near 0.05 are, under a variety of assumptions, associated with minimum false positive risks of 20-30%, which should stop a researcher from making too big

a claim about the "statistical significance" of such a result.

Benjamin and Berger (2019) propose a different supplement to the null p-value. The Bayes factor bound (BFB)—which under typically plausible assumptions is the value  $1/(-ep \ln p)$  represents the upper bound of the ratio of data-based odds of the alternative hypothesis to the null hypothesis. Benjamin and Berger advise that the BFB should be reported along with the continuous p-value. This is an incomplete step toward revising practice, they argue, but one that at least confronts the researcher with the maximum possible odds that the alternative hypothesis is true—which is what researchers often think they are getting with a p-value. The BFB, like the FPR, often clarifies that the evidence against the null hypothesis contained in the *p*-value is not nearly as strong as is believed by many researchers.

Goodman, Spruill, and Komaroff (2019) propose a twostage approach to inference, requiring both a small p-value below a pre-specified level and a pre-specified sufficiently large effect size before declaring a result "significant." They argue that this method has improved performance relative to use of dichotomized *p*-values alone.

Gannon, Pereira, and Polpo (2019) have developed a testing procedure combining frequentist and Bayesian tools to provide a significance level that is a function of sample size.

Manski (2019) and Manski and Tetenov (2019) urge a return to the use of statistical decision theory, which they say has largely been forgotten. Statistical decision theory is not based on pvalue thresholds and readily distinguishes between statistical and clinical significance.

Billheimer (2019) suggests abandoning inference about parameters, which are frequently hypothetical quantities used to idealize a problem. Instead, he proposes focusing on the prediction of future observables, and their associated uncertainty, as a means to improving science and decisionmaking.

#### 3.2.4. Thoughtful Communication of Confidence

Be thoughtful and clear about the level of confidence or credibility that is present in statistical results.

Amrhein, Trafimow, and Greenland (2019) and Greenland (2019) argue that the use of words like "significance" in conjunction with p-values and "confidence" with interval estimates misleads users into overconfident claims. They propose that researchers think of p-values as measuring the compatibility between hypotheses and data, and interpret interval estimates as "compatibility intervals."

In what may be a controversial proposal, Goodman (2018) suggests requiring "that any researcher making a claim in a study accompany it with their estimate of the chance that the claim is true." Goodman calls this the confidence index. For example, along with stating "This drug is associated with elevated risk of a heart attack, relative risk (RR) = 2.4, p = 0.03," Goodman says investigators might add a statement such as "There is an 80% chance that this drug raises the risk, and a 60% chance that the risk is at least doubled." Goodman acknowledges, "Although

simple on paper, requiring a confidence index would entail a profound overhaul of scientific and statistical practice."

In a similar vein, Hubbard and Carriquiry (2019) urge that researchers prominently display the probability the hypothesis is true or a probability distribution of an effect size, or provide sufficient information for future researchers and policy makers to compute it. The authors further describe why such a probability is necessary for decision making, how it could be estimated by using historical rates of reproduction of findings, and how this same process can be part of continuous "quality control" for

Being thoughtful in our approach to research will lead us to be open in our design, conduct, and presentation of it

#### 3.3. Be Open

We envision openness as embracing certain positive practices in the development and presentation of research work.

#### 3.3.1. Openness to Transparency and to the Role of **Expert Judgment**

First, we repeat oft-repeated advice: Be open to "open science" practices. Calin-Jageman and Cumming (2019), Locascio (2019), and others in this special issue urge adherence to practices such as public pre-registration of methods, transparency and completeness in reporting, shared data and code, and even pre-registered ("results-blind") review. Completeness in reporting, for example, requires not only describing all analyses performed but also presenting all findings obtained, without regard to statistical significance or any such criterion.

Openness also includes understanding and accepting the role of expert judgment, which enters the practice of statistical inference and decision-making in numerous ways (O'Hagan 2019). "Indeed, there is essentially no aspect of scientific investigation in which judgment is not required," O'Hagan observes. "Judgment is necessarily subjective, but should be made as carefully, as objectively, and as scientifically as possible."

Subjectivity is involved in any statistical analysis, Bayesian or frequentist. Gelman and Hennig (2017) observe, "Personal decision making cannot be avoided in statistical data analysis and, for want of approaches to justify such decisions, the pursuit of objectivity degenerates easily to a pursuit to merely appear objective." One might say that subjectivity is not a problem; it is part of the solution.

Acknowledging this, Brownstein et al. (2019) point out that expert judgment and knowledge are required in all stages of the scientific method. They examine the roles of expert judgment throughout the scientific process, especially regarding the integration of statistical and content expertise. "All researchers, irrespective of their philosophy or practice, use expert judgment in developing models and interpreting results," say Brownstein et al. "We must accept that there is subjectivity in every stage of scientific inquiry, but objectivity is nevertheless the fundamental goal. Therefore, we should base judgments on evidence and careful reasoning, and seek wherever possible to eliminate potential sources of bias."

How does one rigorously elicit expert knowledge and judgment in an effective, unbiased, and transparent way? O'Hagan (2019) addresses this, discussing protocols to elicit expert knowledge in an unbiased and as scientifically sound was as possible. It is also important for such elicited knowledge to be examined critically, comparing it to actual study results being an important diagnostic step.

#### 3.3.2. Openness in Communication

**Be open** in your reporting. Report *p*-values as continuous, descriptive statistics, as we explain in Section 2. We realize that this leaves researchers without their familiar bright line anchors. Yet if we were to propose a universal template for presenting and interpreting continuous *p*-values we would violate our own principles! Rather, we believe that the thoughtful use and interpretation of *p*-values will never adhere to a rigid rulebook, and will instead inevitably vary from study to study. Despite these caveats, we can offer recommendations for sound practices, as described below.

In all instances, regardless of the value taken by p or any other statistic, consider what McShane et al. (2019) call the "currently subordinate factors"—the factors that should no longer be subordinate to "p < 0.05." These include relevant prior evidence, plausibility of mechanism, study design and data quality, and the real-world costs and benefits that determine what effects are scientifically important. The scientific context of your study matters, they say, and this should guide your interpretation.

When using *p*-values, remember not only Principle 5 of the ASA statement: "A *p*-value...does not measure the size of an effect or the importance of a result" but also Principle 6: "By itself, a *p*-value does not provide a good measure of evidence regarding a model or hypothesis." Despite these limitations, if you present *p*-values, do so for more than one hypothesized value of your variable of interest (Fraser 2019; Greenland 2019), such as 0 and at least one plausible, relevant alternative, such as the minimum practically important effect size (which should be determined before analyzing the data).

Betensky (2019) also reminds us to interpret the *p*-value in the context of sample size and meaningful effect size.

Instead of p, you might consider presenting the s-value (Greenland 2019), which is described in Section 3.2. As noted in Section 3.1, you might present a confidence interval. Sound practices in the interpretation of confidence intervals include (1) discussing both the upper and lower limits and whether they have different practical implications, (2) paying no particular attention to whether the interval includes the null value, and (3) remembering that an interval is itself an estimate subject to error and generally provides only a rough indication of uncertainty given that all of the assumptions used to create it are correct and, thus, for example, does not "rule out" values outside the interval. Amrhein, Trafimow, and Greenland (2019) suggest that interval estimates be interpreted as "compatibility" intervals rather than as "confidence" intervals, showing the values that are most compatible with the data, under the model used to compute the interval. They argue that such an interpretation and the practices outlined here can help guard against overconfidence.

It is worth noting that Tong (2019) disagrees with using *p*-values as descriptive statistics. "Divorced from the probability

claims attached to such quantities (confidence levels, nominal Type I errors, and so on), there is no longer any reason to privilege such quantities over descriptive statistics that more directly characterize the data at hand." He further states, "Methods with alleged generality, such as the *p*-value or Bayes factor, should be avoided in favor of discipline- and problem-specific solutions that can be designed to be fit for purpose."

Failing to **be open** in reporting leads to publication bias. Ioannidis (2019) notes the high level of selection bias prevalent in biomedical journals. He defines "selection" as "the collection of choices that lead from the planning of a study to the reporting of *p*-values." As an illustration of one form of selection bias, Ioannidis compared "the set of *p*-values reported in the full text of an article with the set of *p*-values reported in the abstract." The main finding, he says, "was that *p*-values chosen for the abstract tended to show greater significance than those reported in the text, and that the gradient was more pronounced in some types of journals and types of designs." Ioannidis notes, however, that selection bias "can be present regardless of the approach to inference used." He argues that in the long run, "the only direct protection must come from standards for reproducible research."

To **be open**, remember that one study is rarely enough. The words "a groundbreaking new study" might be loved by news writers but must be resisted by researchers. Breaking ground is only the first step in building a house. It will be suitable for habitation only after much more hard work.

**Be open** by providing sufficient information so that other researchers can execute meaningful alternative analyses. van Dongen et al. (2019) provide an illustrative example of such alternative analyses by different groups attacking the same problem.

Being open goes hand in hand with being modest.

#### 3.4. Be Modest

Researchers of any ilk may rarely advertise their personal modesty. Yet the most successful ones cultivate a practice of **being modest** throughout their research, by understanding and clearly expressing the limitations of their work.

Being modest requires a reality check (Amrhein, Trafimow, and Greenland 2019). "A core problem," they observe, "is that both scientists and the public confound statistics with reality. But statistical inference is a thought experiment, describing the predictive performance of models about reality. Of necessity, these models are extremely simplified relative to the complexities of actual study conduct and of the reality being studied. Statistical results must eventually mislead us when they are used and communicated as if they present this complex reality, rather than a model for it. This is not a problem of our statistical methods. It is a problem of interpretation and communication of results."

**Be modest** in recognizing there is not a "true statistical model" underlying every problem, which is why it is wise to **thoughtfully** consider many possible models (Lavine 2019). Rougier (2019) calls on researchers to "recognize that behind every choice of null distribution and test statistic, there lurks

a plausible family of alternative hypotheses, which can provide more insight into the null distribution."

p-values, confidence intervals, and other statistical measures are all uncertain. Treating them otherwise is immodest overconfidence.

Remember that statistical tools have their limitations. Rose and McGuire (2019) show how use of stepwise regression in health care settings can lead to policies that are unfair.

Remember also that the amount of evidence for or against a hypothesis provided by p-values near the ubiquitous p < 0.05threshold (Johnson 2019) is usually much less than you think (Benjamin and Berger 2019; Colquhoun 2019; Greenland 2019).

Be modest about the role of statistical inference in scientific inference. "Scientific inference is a far broader concept than statistical inference," says Hubbard, Haig, and Parsa (2019). "A major focus of scientific inference can be viewed as the pursuit of significant sameness, meaning replicable and empirically generalizable results among phenomena. Regrettably, the obsession with users of statistical inference to report significant differences in data sets actively thwarts cumulative knowledge development."

The nexus of openness and modesty is to report everything while at the same time not concluding anything from a single study with unwarranted certainty. Because of the strong desire to inform and be informed, there is a relentless demand to state results with certainty. Again, accept uncertainty and embrace variation in associations and effects, because they are always there, like it or not. Understand that expressions of uncertainty are themselves uncertain. Accept that one study is rarely definitive, so encourage, sponsor, conduct, and publish replication studies. Then, use meta-analysis, evidence reviews, and Bayesian methods to synthesize evidence across studies.

Resist the urge to overreach in the generalizability of claims, Watch out for pressure to embellish the abstract or the press release. If the study's limitations are expressed in the paper but not in the abstract, they may never be read.

Be modest by encouraging others to reproduce your work. Of course, for it to be reproduced readily, you will necessarily have been **thoughtful** in conducting the research and **open** in presenting it.

Hubbard and Carriquiry (see their "do list" in Section 7) suggest encouraging reproduction of research by giving "a byline status for researchers who reproduce studies." They would like to see digital versions of papers dynamically updated to display "Reproduced by..." below original research authors' names or "not yet reproduced" until it is reproduced.

Indeed, when it comes to reproducibility, Amrhein, Trafimow, and Greenland (2019) demand that we be modest in our expectations. "An important role for statistics in research is the summary and accumulation of information," they say. "If replications do not find the same results, this is not necessarily a crisis, but is part of a natural process by which science evolves. The goal of scientific methodology should be to direct this evolution toward ever more accurate descriptions of the world and how it works, not toward ever more publication of inferences, conclusions, or decisions."

Referring to replication studies in psychology, McShane et al. (2019) recommend that future large-scale replication projects "should follow the 'one phenomenon, many studies' approach of the Many Labs project and Registered Replication Reports rather than the 'many phenomena, one study' approach of the Open Science Collaboration project. In doing so, they should systematically vary method factors across the laboratories involved in the project." This approach helps achieve the goals of Amrhein, Trafimow, and Greenland (2019) by increasing understanding of why and when results replicate or fail to do so, yielding more accurate descriptions of the world and how it works. It also speaks to significant sameness versus significant difference a la Hubbard, Haig, and Parsa (2019).

Kennedy-Shaffer's (2019) historical perspective on statistical significance reminds us to be modest, by prompting us to recall how the current state of affairs in *p*-values has come to be.

Finally, **be modest** by recognizing that different readers may have very different stakes on the results of your analysis, which means you should try to take the role of a neutral judge rather than an advocate for any hypothesis. This can be done, for example, by pairing every null p-value with a p-value testing an equally reasonable alternative, and by discussing the endpoints of every interval estimate (not only whether it contains the null).

Accept that both scientific inference and statistical inference are hard, and understand that no knowledge will be efficiently advanced using simplistic, mechanical rules and procedures. Accept also that pure objectivity is an unattainable goal—no matter how laudable-and that both subjectivity and expert judgment are intrinsic to the conduct of science and statistics. Accept that there will always be uncertainty, and be thoughtful, open, and modest. ATOM.

And to push this acronym further, we argue in the next section that institutional change is needed, so we put forward that change is needed at the ATOMIC level. Let's go.

#### 4. Editorial, Educational and Other Institutional **Practices Will Have to Change**

Institutional reform is necessary for moving beyond statistical significance in any context—whether journals, education, academic incentive systems, or others. Several papers in this special issue focus on reform.

Goodman (2019) notes considerable social change is needed in academic institutions, in journals, and among funding and regulatory agencies. He suggests (see Section 7) partnering "with science reform movements and reformers within disciplines, journals, funding agencies and regulators to promote and reward 'reproducible' science and diminish the impact of statistical significance on publication, funding and promotion." Similarly, Colquhoun (2019) says, "In the end, the only way to solve the problem of reproducibility is to do more replication and to reduce the incentives that are imposed on scientists to produce unreliable work. The publish-or-perish culture has damaged science, as has the judgment of their work by silly metrics."

Trafimow (2019), who added energy to the discussion of pvalues a few years ago by banning them from the journal he edits (Fricker et al. 2019), suggests five "nonobvious changes" to editorial practice. These suggestions, which demand reevaluating traditional practices in editorial policy, will not be trivial to implement but would result in massive change in some journals. Locascio (2017, 2019) suggests that evaluation of manuscripts for publication should be "results-blind." That is, manuscripts should be assessed for suitability for publication based on the substantive importance of the research without regard to their reported results. Kmetz (2019) supports this approach as well and says that it would be a huge benefit for reviewers, "freeing [them] from their often thankless present jobs and instead allowing them to review research designs for their potential to provide useful knowledge." (See also "registered reports" from the Center for Open Science (https://cos.io/rr/?\_ga=2.184185454.979594832.1547755516-1193527346.1457026171) and "registered replication reports" from the Association for Psychological Science (https://www.psychologicalscience.org/publications/replication) in relation to this concept.)

Amrhein, Trafimow, and Greenland (2019) ask if results-blind publishing means that anything goes, and then answer affirmatively: "Everything should be published in some form if whatever we measured made sense before we obtained the data because it was connected in a potentially useful way to some research question." Journal editors, they say, "should be proud about [their] exhaustive methods sections" and base their decisions about the suitability of a study for publication "on the quality of its materials and methods rather than on results and conclusions; the quality of the presentation of the latter is only judged after it is determined that the study is valuable based on its materials and methods."

A "variation on this theme is *pre-registered replication*, where a *replication* study, rather than the original study, is subject to strict pre-registration (e.g., Gelman 2015)," says Tong (2019). "A broader vision of this idea (Mogil and Macleod 2017) is to carry out a whole series of exploratory experiments *without* any formal statistical inference, and summarize the results by descriptive statistics (including graphics) or even just disclosure of the raw data. When results from this series of experiments converge to a single working hypothesis, it can *then* be subjected to a pre-registered, randomized and blinded, appropriately powered confirmatory experiment, carried out by another laboratory, in which valid statistical inference may be made."

Hurlbert, Levine, and Utts (2019) urge abandoning the use of "statistically significant" in all its forms and encourage journals to provide instructions to authors along these lines: "There is now wide agreement among many statisticians who have studied the issue that for reporting of statistical tests yielding *p*-values it is illogical and inappropriate to dichotomize the *p*-scale and describe results as 'significant' and 'nonsignificant.' Authors are strongly discouraged from continuing this never justified practice that originated from confusions in the early history of modern statistics."

Hurlbert, Levine, and Utts (2019) also urge that the ASA Statement on P-Values and Statistical Significance "be sent to the editor-in-chief of every journal in the natural, behavioral and social sciences for forwarding to their respective editorial boards and stables of manuscript reviewers. That would be a good way to quickly improve statistical understanding and practice." Kmetz (2019) suggests referring to the ASA statement whenever submitting a paper or revision to any editor, peer reviewer, or prospective reader. Hurlbert et al. encourage a "community grassroots effort" to encourage change in journal procedures.

Campbell and Gustafson (2019) propose a statistical model for evaluating publication policies in terms of weighing novelty of studies (and the likelihood of those studies subsequently being found false) against pre-specified study power. They observe that "no publication policy will be perfect. Science is inherently challenging and we must always be willing to accept that a certain proportion of research is potentially false."

Statistics education will require major changes at all levels to move to a post "p < 0.05" world. Two papers in this special issue make a specific start in that direction (Maurer et al. 2019; Steel, Liermann, and Guttorp 2019), but we hope that volumes will be written on this topic in other venues. We are excited that, with support from the ASA, the US Conference on Teaching Statistics (USCOTS) will focus its 2019 meeting on teaching inference.

The change that needs to happen demands change to editorial practice, to the teaching of statistics at every level where inference is taught, and to much more. However...

### 5. It is Going to Take Work, and it is Going to Take Time

If it were easy, it would have already been done, because as we have noted, this is nowhere near the first time the alarm has been sounded.

Why is eliminating the use of *p*-values as a truth arbiter so hard? "The basic explanation is neither philosophical nor scientific, but sociologic; everyone uses them," says Goodman (2019). "It's the same reason we can use money. When everyone believes in something's value, we can use it for real things; money for food, and *p*-values for knowledge claims, publication, funding, and promotion. It doesn't matter if the *p*-value doesn't mean what people think it means; it becomes valuable because of what it buys."

Goodman observes that statisticians alone cannot address the problem, and that "any approach involving only statisticians will not succeed." He calls on statisticians to ally themselves "both with scientists in other fields and with broader based, multidisciplinary scientific reform movements. What statisticians can do within our own discipline is important, but to effectively disseminate or implement virtually any method or policy, we need partners."

"The loci of influence," Goodman says, "include journals, scientific lay and professional media (including social media), research funders, healthcare payors, technology assessors, regulators, academic institutions, the private sector, and professional societies. They also can include policy or informational entities like the National Academies...as well as various other science advisory bodies across the government. Increasingly, they are also including non-traditional science reform organizations comprised both of scientists and of the science literate lay public...and a broad base of health or science advocacy groups..."

It is no wonder, then, that the problem has persisted for so long. And persist it has! Hubbard (2019) looked at citation-count data on twenty-five articles and books severely critical of the effect of null hypothesis significance testing (NHST) on good science. Though issues were well known, Hubbard says, this did nothing to stem NHST usage over time.

Greenland (personal communication, January 25, 2019) notes that cognitive biases and perverse incentives to offer firm conclusions where none are warranted can warp the use of any method. "The core human and systemic problems are not addressed by shifting blame to *p*-values and pushing alternatives as magic cures—especially alternatives that have been subject to little or no comparative evaluation in either classrooms or practice," Greenland said. "What we need now is to move beyond debating only our methods and their interpretations, to concrete proposals for elimination of systemic problems such as pressure to produce noteworthy findings rather than to produce reliable studies and analyses. Review and provisional acceptance of reports before their results are given to the journal (Locascio 2019) is one way to address that pressure, but more ideas are needed since review of promotions and funding applications cannot be so blinded. The challenges of how to deal with human biases and incentives may be the most difficult we must face." Supporting this view is McShane and Gal's (2016, 2017) empirical demonstration of cognitive dichotomization errors among biomedical and social science researchers—and even among statisticians.

Challenges for editors and reviewers are many. Here's an example: Fricker et al. (2019) observed that when p-values were suspended from the journal Basic and Applied Social Psychology authors tended to overstate conclusions.

With all the challenges, how do we get from here to there, from a "p < 0.05" world to a post "p < 0.05" world?

Matthews (2019) notes that "Any proposal encouraging changes in inferential practice must accept the ubiquity of NHST....Pragmatism suggests, therefore, that the best hope of achieving a change in practice lies in offering inferential tools that can be used alongside the concepts of NHST, adding value to them while mitigating their most egregious features."

Benjamin and Berger (2019) propose three practices to help researchers during the transition away from use of statistical significance. "...[O]ur goal is to suggest minimal changes that would require little effort for the scientific community to implement," they say. "Motivating this goal are our hope that easy (but impactful) changes might be adopted and our worry that more complicated changes could be resisted simply because they are perceived to be too difficult for routine implementation."

Yet there is also concern that progress will stop after a small step or two. Even some proponents of small steps are clear that those small steps still carry us far short of the destination.

For example, Matthews (2019) says that his proposed methodology "is not a panacea for the inferential ills of the research community." But that doesn't make it useless. It may "encourage researchers to move beyond NHST and explore the statistical armamentarium now available to answer the central question of research: what does our study tell us?" he says. It "provides a bridge between the dominant but flawed NHST paradigm and the less familiar but more informative methods of Bayesian estimation."

Likewise, Benjamin and Berger (2019) observe, "In research communities that are deeply attached to reliance on 'p < 0.05,' our recommendations will serve as initial steps away from this attachment. We emphasize that our recommendations are intended merely as initial, temporary steps and that many further steps will need to be taken to reach the ultimate destination: a holistic interpretation of statistical evidence that fully conforms to the principles laid out in the ASA Statement..."

Yet, like the authors of this editorial, not all authors in this special issue support gradual approaches with transitional methods.

Some (e.g., Amrhein, Trafimow, and Greenland 2019; Hurlbert, Levine, and Utts 2019; McShane et al. 2019) prefer to rip off the bandage and abandon use of statistical significance altogether. In short, no more dichotomizing p-values into categories of "significance." Notably, these authors do not suggest banning the use of p-values, but rather suggest using them descriptively, treating them as continuous, and assessing their weight or import with nuanced thinking, clear language, and full understanding of their properties.

So even when there is agreement on the destination, there is disagreement about what road to take. The questions around reform need consideration and debate. It might turn out that different fields take different roads.

The catalyst for change may well come from those people who fund, use, or depend on scientific research, say Calin-Jageman and Cumming (2019). They believe this change has not yet happened to the desired level because of "the cognitive opacity of the NHST approach: the counter-intuitive p-value (it's good when it is small), the mysterious null hypothesis (you want it to be false), and the eminently confusable Type I and Type II errors."

Reviewers of this editorial asked, as some readers of it will, is a p-value threshold ever okay to use? We asked some of the authors of articles in the special issue that question as well. Authors identified four general instances. Some allowed that, while p-value thresholds should not be used for inference, they might still be useful for applications such as industrial quality control, in which a highly automated decision rule is needed and the costs of erroneous decisions can be carefully weighed when specifying the threshold. Other authors suggested that such dichotomized use of p-values was acceptable in modelfitting and variable selection strategies, again as automated tools, this time for sorting through large numbers of potential models or variables. Still others pointed out that *p*-values with very low thresholds are used in fields such as physics, genomics, and imaging as a filter for massive numbers of tests. The fourth instance can be described as "confirmatory setting[s] where the study design and statistical analysis plan are specified prior to data collection, and then adhered to during and after it" (Tong 2019). Tong argues these are the only proper settings for formal statistical inference. And Wellek (2017) says at present it is essential in these settings. "[B]inary decision making is indispensable in medicine and related fields," he says. "[A] radical rejection of the classical principles of statistical inference...is of virtually no help as long as no conclusively substantiated alternative can be offered."

Eliminating the declaration of "statistical significance" based on p < 0.05 or other arbitrary thresholds will be easier in some venues than others. Most journals, if they are willing, could fairly rapidly implement editorial policies to effect these changes. Suggestions for how to do that are in this special issue of The American Statistician. However, regulatory agencies might require longer timelines for making changes. The U.S. Food and

Drug Administration (FDA), for example, has long established drug review procedures that involve comparing *p*-values to significance thresholds for Phase III drug trials. Many factors demand consideration, not the least of which is how to avoid turning every drug decision into a court battle. Goodman (2019) cautions that, even as we seek change, "we must respect the reason why the statistical procedures are there in the first place." Perhaps the ASA could convene a panel of experts, internal and external to FDA, to provide a workable new paradigm. (See Ruberg et al. 2019, who argue for a Bayesian approach that employs data from other trials as a "prior" for Phase 3 trials.)

Change is needed. Change has been needed for decades. Change has been called for by others for quite a while. So...

#### 6. Why Will Change Finally Happen Now?

In 1991, a confluence of weather events created a monster storm that came to be known as "the perfect storm," entering popular culture through a book (Junger 1997) and a 2000 movie starring George Clooney. Concerns about reproducible science, falling public confidence in science, and the initial impact of the ASA statement in heightening awareness of long-known problems created a perfect storm, in this case, a good storm of motivation to make lasting change. Indeed, such change was the intent of the ASA statement, and we expect this special issue of TAS will inject enough additional energy to the storm to make its impact widely felt.

We are not alone in this view. "60+ years of incisive criticism has not yet dethroned NHST as the dominant approach to inference in many fields of science," note Calin-Jageman and Cumming (2019). "Momentum, though, seems to finally be on the side of reform."

Goodman (2019) agrees: "The initial slow speed of progress should not be discouraging; that is how all broad-based social movements move forward and we should be playing the long game. But the ball is rolling downhill, the current generation is inspired and impatient to carry this forward."

So, let's do it. Let's move beyond "statistically significant," even if upheaval and disruption are inevitable for the time being. It's worth it. In a world beyond "p < 0.05," by breaking free from the bonds of statistical significance, statistics in science and policy will become more significant than ever.

#### 7. Authors' Suggestions

The editors of this special TAS issue on statistical inference asked all the contact authors to help us summarize the guidance they provided in their papers by providing us a short list of do's. We asked them to be specific but concise and to be active—start each with a verb. Here is the complete list of the authors' responses, ordered as the papers appear in this special issue.

#### 7.1. Getting to a Post "p < 0.05" Era

## Ioannidis, J., What Have We (Not) Learnt From Millions of Scientific Papers With p-Values?

1. Do not use *p*-values, unless you have clearly thought about the need to use them and they still seem the best choice.

- 2. Do not favor "statistically significant" results.
- 3. Do be highly skeptical about "statistically significant" results at the 0.05 level.

## Goodman, S., Why Is Getting Rid of p-Values So Hard? Musings on Science and Statistics

- Partner with science reform movements and reformers within disciplines, journals, funding agencies and regulators to promote and reward reproducible science and diminish the impact of statistical significance on publication, funding and promotion.
- 2. Speak to and write for the multifarious array of scientific disciplines, showing how statistical uncertainty and reasoning can be conveyed in non-"bright-line" ways both with conventional and alternative approaches. This should be done not just in didactic articles, but also in original or reanalyzed research, to demonstrate that it is publishable.
- 3. Promote, teach and conduct meta-research within many individual scientific disciplines to demonstrate the adverse effects in each of over-reliance on and misinterpretation of *p*-values and significance verdicts in individual studies and the benefits of emphasizing estimation and cumulative evidence.
- 4. Require reporting a quantitative measure of certainty—a "confidence index"—that an observed relationship, or claim, is true. Change analysis goal from achieving significance to appropriately estimating this confidence.
- 5. Develop and share teaching materials, software, and published case examples to help with all of the do's above, and to spread progress in one discipline to others.

## Hubbard, R., Will the ASA's Efforts to Improve Statistical Practice be Successful? Some Evidence to the Contrary

This list applies to the ASA and to the professional statistics community more generally.

- 1. Specify, where/if possible, those situations in which the *p*-value plays a clearly valuable role in data analysis and interpretation.
- 2. Contemplate issuing a statement abandoning the use of *p*-values in null hypothesis significance testing.

#### Kmetz, J., Correcting Corrupt Research: Recommendations for the Profession to Stop Misuse of p-Values

- 1. Refer to the ASA statement on *p*-values whenever submitting a paper or revision to any editor, peer reviewer, or prospective reader. Many in the field do not know of this statement, and having the support of a prestigious organization when authoring any research document will help stop corrupt research from becoming even more dominant than it is.
- 2. Train graduate students and future researchers by having them reanalyze published studies and post their findings to appropriate websites or weblogs. This practice will benefit not only the students, but will benefit the professions, by increasing the amount of replicated (or nonreplicated) research available and readily accessible, and as well as reformer organizations that support replication.
- 3. Join one or more of the reformer organizations formed or forming in many research fields, and support and publicize their efforts to improve the quality of research practices.

- 4. Challenge editors and reviewers when they assert that incorrect practices and interpretations of research, consistent with existing null hypothesis significance testing and beliefs regarding p-values, should be followed in papers submitted to their journals. Point out that new submissions have been prepared to be consistent with the ASA statement on pvalues.
- 5. Promote emphasis on research quality rather than research quantity in universities and other institutions where professional advancement depends heavily on research "productivity," by following the practices recommended in this special journal edition. This recommendation will fall most heavily on those who have already achieved success in their fields, perhaps by following an approach quite different from that which led to their success; whatever the merits of that approach may have been, one objectionable outcome of it has been the production of voluminous corrupt research and creation of an environment that promotes and protects it. We must do better.

#### Hubbard, D., and Carriquiry, A., Quality Control for Scientific Research: Addressing Reproducibility, Responsiveness and Relevance

- 1. Compute and prominently display the probability the hypothesis is true (or a probability distribution of an effect size) or provide sufficient information for future researchers and policy makers to compute it.
- 2. Promote publicly displayed quality control metrics within your field—in particular, support tracking of reproduction studies and computing the "level 1" and even "level 2" priors as required for #1 above.
- 3. Promote a byline status for researchers who reproduce studies: Digital versions are dynamically updated to display "Reproduced by...." below original research authors' names or "Not yet reproduced" until it is reproduced.

#### Brownstein, N., Louis, T., O'Hagan, A., and Pendergast, J., The Role of Expert Judgment in Statistical Inference and Evidence-**Based Decision-Making**

- 1. Staff the study team with members who have the necessary knowledge, skills and experience—statistically, scientifically, and otherwise.
- 2. Include key members of the research team, including statisticians, in all scientific and administrative meetings.
- 3. Understand that subjective judgments are needed in all stages of a study.
- 4. Make all judgments as carefully and rigorously as possible and document each decision and rationale for transparency and reproducibility.
- 5. Use protocol-guided elicitation of judgments.
- 6. Statisticians specifically should:
  - Refine oral and written communication skills.
  - Understand their multiple roles and obligations as collab-
  - Take an active leadership role as a member of the scientific team; contribute throughout all phases of the study.

- Co-own the subject matter—understand a sufficient amount about the relevant science/policy to meld statistical and subject-area expertise.
- Promote the expectation that your collaborators co-own statistical issues.
- Write a statistical analysis plan for all analyses and track any changes to that plan over time.
- Promote co-responsibility for data quality, security, and documentation.
- · Reduce unplanned and uncontrolled modeling/testing (HARK-ing, *p*-hacking); document all analyses.

#### O'Hagan, A., Expert Knowledge Elicitation: Subjective but Scientific

- 1. Elicit expert knowledge when data relating to a parameter of interest is weak, ambiguous or indirect.
- 2. Use a well-designed protocol, such as SHELF, to ensure expert knowledge is elicited in as scientific and unbiased a way as possible.

#### Kennedy-Shaffer, L., Before p < 0.05 to Beyond p < 0.05: Using History to Contextualize p-Values and Significance Testing

- 1. Ensure that inference methods match intuitive understandings of statistical reasoning.
- 2. Reduce the computational burden for nonstatisticians using statistical methods.
- 3. Consider changing conditions of statistical and scientific inference in developing statistical methods.
- 4. Address uncertainty quantitatively and in ways that reward increased precision.

#### Hubbard, R., Haig, B. D., and Parsa, R. A., The Limited Role of Formal Statistical Inference in Scientific Inference

- 1. Teach readers that although deemed equivalent in the social, management, and biomedical sciences, formal methods of statistical inference and scientific inference are very different animals.
- 2. Show these readers that formal methods of statistical inference play only a restricted role in scientific inference.
- 3. Instruct researchers to pursue significant sameness (i.e., replicable and empirically generalizable results) rather than significant differences in results.
- 4. Demonstrate how the pursuit of significant differences actively impedes cumulative knowledge development.

#### McShane, B., Tackett, J., Böckenholt, U., and Gelman, A., Large Scale Replication Projects in Contemporary Psychological Research

- 1. When planning a replication study of a given psychological phenomenon, bear in mind that replication is complicated in psychological research because studies can never be direct or exact replications of one another, and thus heterogeneityeffect sizes that vary from one study of the phenomenon to the next—cannot be avoided.
- 2. Future large scale replication projects should follow the "one phenomenon, many studies" approach of the Many Labs project and Registered Replication Reports rather than the

- "many phenomena, one study" approach of the Open Science Collaboration project. In doing so, they should systematically vary method factors across the laboratories involved in the project.
- 3. Researchers analyzing the data resulting from large scale replication projects should do so via a hierarchical (or multilevel) model fit to the totality of the individual-level observations. In doing so, all theoretical moderators should be modeled via covariates while all other potential moderators—that is, method factors—should induce variation (i.e., heterogeneity).
- 4. Assessments of replicability should not depend solely on estimates of effects, or worse, significance tests based on them. Heterogeneity must also be an important consideration in assessing replicability.

#### 7.2. Interpreting and Using p

#### Greenland, S., Valid p-Values Behave Exactly as They Should: Some Misleading Criticisms of p-Values and Their Resolution With s-Values

- 1. Replace any statements about statistical significance of a result with the p-value from the test, and present the p-value as an equality, not an inequality. For example, if p=0.03 then "...was statistically significant" would be replaced by "...had p=0.03," and "p<0.05" would be replaced by "p=0.03." (An exception: If p is so small that the accuracy becomes very poor then an inequality reflecting that limit is appropriate; e.g., depending on the sample size, p-values from normal or  $\chi^2$  approximations to discrete data often lack even 1-digit accuracy when p<0.0001.) In parallel, if p=0.25 then "...was not statistically significant" would be replaced by "...had p=0.25," and "p>0.05" would be replaced by "p=0.25."
- 2. Present *p*-values for more than one possibility when testing a targeted parameter. For example, if you discuss the *p*-value from a test of a null hypothesis, also discuss alongside this null *p*-value another *p*-value for a plausible alternative parameter possibility (ideally the one used to calculate power in the study proposal). As another example: if you do an equivalence test, present the *p*-values for both the lower and upper bounds of the equivalence interval (which are used for equivalence tests based on two one-sided tests).
- 3. Show confidence intervals for targeted study parameters, but also supplement them with p-values for testing relevant hypotheses (e.g., the p-values for both the null and the alternative hypotheses used for the study design or proposal, as in #2). Confidence intervals only show clearly what is in or out of the interval (i.e., a 95% interval only shows clearly what has p > 0.05 or  $p \le 0.05$ ), but more detail is often desirable for key hypotheses under contention.
- 4. Compare groups and studies directly by showing p-values and interval estimates for their differences, not by comparing p-values or interval estimates from the two groups or studies. For example, seeing p=0.03 in males and p=0.12 in females does **not** mean that different associations were seen in males and females; instead, one needs a p-value and confidence interval for the difference in the sex-specific

- associations to examine the between-sex difference. Similarly, if an early study reported a confidence interval which excluded the null and then a subsequent study reported a confidence interval which included the null, that does not mean the studies gave conflicting results or that the second study failed to replicate the first study; instead, one needs a *p*-value and confidence interval for the difference in the study-specific associations to examine the between-study difference. In all cases, differences-between-differences must be analyzed directly by statistics for that purpose.
- 5. Supplement a focal p-value p with its Shannon information transform (s-value or surprisal)  $s = -\log_2(p)$ . This measures the amount of information supplied by the test against the tested hypothesis (or model): Rounded off, the s-value s shows the number of heads in a row one would need to see when tossing a coin to get the same amount of information against the tosses being "fair" (independent with "heads" probability of 1/2) instead of being loaded for heads. For example, if p = 0.03, this represents  $-\log_2(0.03) = 5$  bits of information against the hypothesis (like getting 5 heads in a trial of "fairness" with 5 coin tosses); and if p = 0.25, this represents only  $-\log_2(0.25) = 2$  bits of information against the hypothesis (like getting 2 heads in a trial of "fairness" with only 2 coin tosses).

#### Betensky, R., The p-Value Requires Context, Not a Threshold

- 1. Interpret the *p*-value in light of its context of sample size and meaningful effect size.
- 2. Incorporate the sample size and meaningful effect size into a decision to reject the null hypothesis.

## Anderson, A., Assessing Statistical Results: Magnitude, Precision and Model Uncertainty

- Evaluate the importance of statistical results based on their practical implications.
- 2. Evaluate the strength of empirical evidence based on the precision of the estimates and the plausibility of the modeling choices
- 3. Seek out subject matter expertise when evaluating the importance and the strength of empirical evidence.

#### Heck, P., and Krueger, J., Putting the p-Value in Its Place

- 1. Use the *p*-value as a heuristic, that is, as the base for a tentative inference regarding the presence or absence of evidence against the tested hypothesis.
- 2. Supplement the *p*-value with other, conceptually distinct methods and practices, such as effect size estimates, likelihood ratios, or graphical representations.
- 3. Strive to embed statistical hypothesis testing within strong *a priori* theory and a context of relevant prior empirical evidence.

#### Johnson, V., Evidence From Marginally Significant t-Statistics

- 1. Be transparent in the number of outcome variables that were analyzed.
- Report the number (and values) of all test statistics that were calculated.
- Provide access to protocols for studies involving human or animal subjects.

- 4. Clearly describe data values that were excluded from analysis and the justification for doing so.
- 5. Provide sufficient details on experimental design so that other researchers can replicate the experiment.
- 6. Describe only *p*-values less than 0.005 as being "statistically significant."

#### Fraser, D., The p-Value Function and Statistical Inference

- Determine a primary variable for assessing the hypothesis at issue.
- 2. Calculate its well defined distribution function, respecting continuity.
- 3. Substitute the observed data value to obtain the "*p*-value function."
- 4. Extract the available well defined confidence bounds, confidence intervals, and median estimate.
- 5. Know that you don't have an intellectual basis for decisions.

#### Rougier, J., p-Values, Bayes Factors, and Sufficiency

 Recognize that behind every choice of null distribution and test statistic, there lurks a plausible family of alternative hypotheses, which can provide more insight into the null distribution.

## Rose, S., and McGuire, T., Limitations of p-Values and R-Squared for Stepwise Regression Building: A Fairness Demonstration in Health Policy Risk Adjustment

- 1. Formulate a clear objective for variable inclusion in regression procedures.
- 2. Assess all relevant evaluation metrics.
- 3. Incorporate algorithmic fairness considerations.

#### 7.3. Supplementing or Replacing p

### Blume, J., Greevy, R., Welty, V., Smith, J., and DuPont, W., An Introduction to Second Generation p-Values

- Construct a composite null hypothesis by specifying the range of effects that are not scientifically meaningful (do this before looking at the data). Why: Eliminating the conflict between scientific significance and statistical significance has numerous statistical and scientific benefits.
- 2. Replace classical *p*-values with second-generation *p*-values (SGPV). Why: SGPVs accommodate composite null hypotheses and encourage the proper communication of findings.
- 3. Interpret the SGPV as a high-level summary of what the data say. Why: Science needs a simple indicator of when the data support only meaningful effects (SGPV = 0), when the data support only trivially null effects (SGPV = 1), or when the data are inconclusive (0 < SGPV < 1).
- 4. Report an interval estimate of effect size (confidence interval, support interval, or credible interval) and note its proximity to the composite null hypothesis. Why: This is a more detailed description of study findings.
- 5. Consider reporting false discovery rates with SGPVs of 0 or 1. Why: FDRs gauge the chance that an inference is incorrect under assumptions about the data generating process and prior knowledge.

#### Goodman, W., Spruill, S., and Komaroff, E., A Proposed Hybrid Effect Size Plus p-Value Criterion: Empirical Evidence Supporting Its Use

- 1. Determine how far the true parameter's value would have to be, in your research context, from exactly equaling the conventional, point null hypothesis to consider that the distance is meaningfully large or practically significant.
- 2. Combine the conventional *p*-value criterion with a minimum effect size criterion to generate a two-criteria inference-indicator signal, which provides heuristic, but nondefinitive evidence, for inferring the parameter's true location.
- 3. Document the intended criteria for your inference procedures, such as a *p*-value cut-point and a minimum practically significant effect size, prior to undertaking the procedure.
- 4. Ensure that you use the appropriate inference method for the data that are obtainable and for the inference that is intended.
- 5. Acknowledge that every study is fraught with limitations from unknowns regarding true data distributions and other conditions that one's method assumes.

## Benjamin, D., and Berger, J., Three Recommendations for Improving the Use of p-Values

- 1. Replace the 0.05 "statistical significance" threshold for claims of novel discoveries with a 0.005 threshold and refer to *p*-values between 0.05 and 0.005 as "suggestive."
- 2. Report the data-based odds of the alternative hypothesis to the null hypothesis. If the data-based odds cannot be calculated, then use the *p*-value to report an upper bound on the data-based odds: 1/(-*ep* ln *p*).
- 3. Report your prior odds and posterior odds (prior odds \* data-based odds) of the alternative hypothesis to the null hypothesis. If the data-based odds cannot be calculated, then use your prior odds and the *p*-value to report an upper bound on your posterior odds: (prior odds) \* (1/(-ep ln p)).

## Colquhoun, D., The False Positive Risk: A Proposal Concerning What to Do About p-Values

- 1. Continue to provide *p*-values and confidence intervals. Although widely misinterpreted, people know how to calculate them and they aren't entirely useless. Just don't ever use the terms "statistically significant" or "nonsignificant."
- 2. Provide in addition an indication of false positive risk (FPR). This is the probability that the claim of a real effect on the basis of the *p*-value is in fact false. The FPR (not the *p*-value) is the probability that your result occurred by chance. For example, the fact that, under plausible assumptions, observation of a *p*-value close to 0.05 corresponds to an FPR of at least 0.2–0.3 shows clearly the weakness of the conventional criterion for "statistical significance."
- 3. Alternatively, specify the prior probability of there being a real effect that one would need to be able to justify in order to achieve an FPR of, say, 0.05.

#### Notes:

There are many ways to calculate the FPR. One, based on a point null and simple alternative can be calculated with the web calculator at <a href="http://fpr-calc.ucl.ac.uk/">http://fpr-calc.ucl.ac.uk/</a>. However other approaches to the calculation of FPR, based on different

assumptions, give results that are similar (Table 1 in Colquhoun 2019).

To calculate FPR it is necessary to specify a prior probability and this is rarely known. My recommendation 2 is based on giving the FPR for a prior probability of 0.5. Any higher prior probability of there being a real effect is not justifiable in the absence of hard data. In this sense, the calculated FPR is the minimum that can be expected. More implausible hypotheses would make the problem worse. For example, if the prior probability of there being a real effect were only 0.1, then observation of p=0.05 would imply a disastrously high FPR = 0.76, and in order to achieve an FPR of 0.05, you'd need to observe p=0.00045. Others (especially Goodman) have advocated giving likelihood ratios (LRs) in place of p-values. The FPR for a prior of 0.5 is simply 1/(1+LR), so to give the FPR for a prior of 0.5 is simply a more-easily-comprehensible way of specifying the LR, and so should be acceptable to frequentists and Bayesians.

## Matthews, R., Moving Toward the Post p < 0.05 Era via the Analysis of Credibility

- 1. Report the outcome of studies as effect sizes summarized by confidence intervals (CIs) along with their point estimates.
- 2. Make full use of the point estimate and width and location of the CI relative to the null effect line when interpreting findings. The point estimate is generally the effect size best supported by the study, irrespective of its statistical significance/nonsignificance. Similarly, tight CIs located far from the null effect line generally represent more compelling evidence for a nonzero effect than wide CIs lying close to that line.
- 3. Use the analysis of credibility (AnCred) to assess quantitatively the credibility of inferences based on the CI. AnCred determines the level of prior evidence needed for a new finding to provide credible evidence for a nonzero effect.
- 4. Establish whether this required level of prior evidence is supported by current knowledge and insight. If it is, the new result provides credible evidence for a nonzero effect, irrespective of its statistical significance/nonsignificance.

## Gannon, M., Pereira, C., and Polpo, A., Blending Bayesian and Classical Tools to Define Optimal Sample-Size-Dependent Significance Levels

- 1. Retain the useful concept of statistical significance and the same operational procedures as currently used for hypothesis tests, whether frequentist (Neyman–Pearson *p*-value tests) or Bayesian (Bayes-factor tests).
- 2. Use tests with a sample-size-dependent significance level—ours is optimal in the sense of the generalized Neyman–Pearson lemma.
- 3. Use a testing scheme that allows tests of any kind of hypothesis, without restrictions on the dimensionalities of the parameter space or the hypothesis. Note that this should include "sharp" hypotheses, which correspond to subsets of lower dimensionality than the full parameter space.
- 4. Use hypothesis tests that are compatible with the likelihood principle (LP). They can be easier to interpret consistently than tests that are not LP-compliant.

5. Use numerical methods to handle hypothesis-testing problems with high-dimensional sample spaces or parameter spaces.

#### Pogrow, S., How Effect Size (Practical Significance) Misleads Clinical Practice: The Case for Switching to Practical Benefit to Assess Applied Research Findings

- 1. Switch from reliance on statistical or practical significance to the more stringent statistical criterion of practical benefit for (a) assessing whether applied research findings indicate that an intervention is effective and should be adopted and scaled—particularly in complex organizations such as schools and hospitals and (b) determining whether relationships are sufficiently strong and explanatory to be used as a basis for setting policy or practice recommendations. Practical benefit increases the likelihood that observed benefits will replicate in subsequent research and in clinical practice by avoiding the problems associated with relying on small effect sizes.
- 2. Reform statistics courses in applied disciplines to include the principles of practical benefit, and have students review influential applied research articles in the discipline to determine which findings demonstrate practical benefit.
- 3. Recognize the need to develop different inferential statistical criteria for assessing the importance of applied research findings as compared to assessing basic research findings.
- 4. Consider consistent, noticeable improvements across contexts using the quick prototyping methods of improvement science as a preferable methodology for identifying effective practices rather than on relying on RCT methods.
- 5. Require that applied research reveal the actual unadjusted means/medians of results for all groups and subgroups, and that review panels take such data into account—as opposed to only reporting relative differences between adjusted means/medians. This will help preliminarily identify whether there appear to be clear benefits for an intervention.

#### 7.4. Adopting More Holistic Approaches

## McShane, B., Gal, D., Gelman, A., Robert, C., and Tackett, J., Abandon Statistical Significance

- 1. Treat *p*-values (and other purely statistical measures like confidence intervals and Bayes factors) continuously rather than in a dichotomous or thresholded manner. In doing so, bear in mind that it seldom makes sense to calibrate evidence as a function of *p*-values or other purely statistical measures because they are, among other things, typically defined relative to the generally uninteresting and implausible null hypothesis of zero effect and zero systematic error.
- 2. Give consideration to related prior evidence, plausibility of mechanism, study design and data quality, real world costs and benefits, novelty of finding, and other factors that vary by research domain. Do this always—not just once some *p*-value or other statistical threshold has been attained—and do this without giving priority to *p*-values or other purely statistical measures.

- 3. Analyze and report all of the data and relevant results rather than focusing on single comparisons that attain some p-value or other statistical threshold.
- 4. Conduct a decision analysis: p-value and other statistical threshold-based rules implicitly express a particular tradeoff between Type I and Type II error, but in reality this tradeoff should depend on the costs, benefits, and probabilities of all outcomes.
- 5. Accept uncertainty and embrace variation in effects: we can learn much (indeed, more) about the world by forsaking the false promise of certainty offered by dichotomous declarations of truth or falsity—binary statements about there being "an effect" or "no effect"—based on some p-value or other statistical threshold being attained.
- 6. Obtain more precise individual-level measurements, use within-person or longitudinal designs more often, and give increased consideration to models that use informative priors, that feature varying treatment effects, and that are multilevel or meta-analytic in nature.

#### Tong, C., Statistical Inference Enables Bad Science; Statistical Thinking Enables Good Science

- 1. Prioritize effort for sound data production: the planning, design, and execution of the study.
- 2. Build scientific arguments with many sets of data and multiple lines of evidence.
- 3. Recognize the difference between exploratory and confirmatory objectives and use distinct statistical strategies for each.
- 4. Use flexible descriptive methodology, including disciplined data exploration, enlightened data display, and regularized, robust, and nonparametric models, for exploratory research.
- 5. Restrict statistical inferences to confirmatory analyses for which the study design and statistical analysis plan are prespecified prior to, and strictly adhered to during, data acquisition.

#### Amrhein, V., Trafimow, D., and Greenland, S., Inferential Statistics as Descriptive Statistics: There Is No Replication Crisis If We Don't Expect Replication

- 1. Do not dichotomize, but embrace variation.
  - Report and interpret inferential statistics like the pvalue in a continuous fashion; do not use the word "significant."
  - (b) Interpret interval estimates as "compatibility intervals," showing effect sizes most compatible with the data, under the model used to compute the interval; do not focus on whether such intervals include or exclude zero.
  - Treat inferential statistics as highly unstable local descriptions of relations between models and the obtained data.
    - Free your "negative results" by allowing them to be potentially positive. Most studies with large p-values or interval estimates that include the null should be considered "positive," in the sense that they usually leave open the possibility of important effects (e.g., the effect sizes within the interval estimates).

- Free your "positive results" by allowing them to be different. Most studies with small p-values or interval estimates that are not near the null should be considered provisional, because in replication studies the p-values could be large and the interval estimates could show very different effect sizes.
- (iii) There is no replication crisis if we don't expect replication. Honestly reported results must vary from replication to replication because of varying assumption violations and random variation; excessive agreement itself would suggest deeper problems such as failure to publish results in conflict with group expectations.

#### Calin-Jageman, R., and Cumming, G., The New Statistics for Better Science: Ask How Much, How Uncertain, and What Else Is Known

- 1. Ask quantitative questions and give quantitative answers.
- 2. Countenance uncertainty in all statistical conclusions, seeking ways to quantify, visualize, and interpret the potential for
- 3. Seek replication, and use quantitative methods to synthesize across data sets as a matter of course.
- 4. Use Open Science practices to enhance the trustworthiness of research results.
- 5. Avoid, wherever possible, any use of *p*-values or NHST.

#### Ziliak, S., How Large Are Your G-Values? Try Gosset's Guinnessometrics When a Little "p" Is Not Enough

- G-10 Consider the Purpose of the Inquiry, and Compare with Best Practice. Falsification of a null hypothesis is not the main purpose of the experiment or observational study. Making money or beer or medicine—ideally more and better than the competition and best practice—is. Estimating the importance of your coefficient relative to results reported by others, is. To repeat, as the 2016 ASA Statement makes clear, merely falsifying a null hypothesis with a qualitative yes/no, exists/does not exist, significant/not significant answer, is not itself significant science, and should be eschewed.
- G-9 Estimate the Stakes (Or Eat Them). Estimation of magnitudes of effects, and demonstrations of their substantive meaning, should be the center of most inquiries. Failure to specify the stakes of a hypothesis is the first step toward eating them (gulp).
- G-8 Study Correlated Data: ABBA, Take a Chance on Me. Most regression models assume "iid" error terms independently and identically distributed-yet most data in the social and life sciences are correlated by systematic, nonrandom effects-and are thus not independent. Gosset solved the problem of correlated soil plots with the "ABBA" layout, maximizing the correlation of paired differences between the As and Bs with a perfectly balanced chiasmic arrangement.
- G-7 Minimize "Real Error" with the 3 R's: Represent, Replicate, Reproduce. A test of significance on a single set of data is nearly valueless. Fisher's p, Student's t, and other tests should only be used when there is actual repetition of the experi-

- ment. "One and done" is scientism, not scientific. Random error is not equal to real error, and is usually smaller and less important than the sum of nonrandom errors. Measurement error, confounding, specification error, and bias of the auspices are frequently larger in all the testing sciences, agronomy to medicine. Guinnessometrics minimizes real error by repeating trials on stratified and balanced vet independent experimental units, controlling as much as possible for local fixed effects.
- G-6 Economize with "Less is More": Small Samples of Independent Experiments. Small sample analysis and distribution theory has an economic origin and foundation: changing inputs to the beer on the large scale (for Guinness, enormous global scale) is risky, with more than money at stake. But smaller samples, as Gosset showed in decades of barley and hops experimentation, does not mean "less than," and Big Data is in any case not the solution for many problems.
- G-5 Keep Your Eyes on the Size Matters/How Much? Question. There will be distractions but the expected loss and profit functions rule, or should. Are regression coefficients or differences between means large or small? Compared to what? How do you know?
- G-4 Visualize. Parameter uncertainty is not the same thing as model uncertainty. Does the result hit you between the eyes? Does the study show magnitudes of effects across the entire distribution? Advances in visualization software continue to outstrip advances in statistical modeling, making more visualization a no brainer.
- G-3 Consider Posteriors and Priors too ("It pays to go Bayes"). The sample on hand is rarely the only thing that is "known." Subject matter expertise is an important prior input to statistical design and affects analysis of "posterior" results. For example, Gosset at Guinness was wise to keep quality assurance metrics and bottom line profit at the center of his inquiry. How does prior information fit into the story and evidence? Advances in Bayesian computing software make it easier and easier to do a Bayesian analysis, merging prior and posterior information, values, and knowledge.
- G-2 Cooperate Up, Down, and Across (Networks and Value *Chains*). For example, where would brewers be today without the continued cooperation of farmers? Perhaps back on the farm and not at the brewery making beer. Statistical science is social, and cooperation helps. Guinness financed a large share of modern statistical theory, and not only by supporting Gosset and other brewers with academic sabbaticals (Ziliak and McCloskey 2008).
- G-1 Answer the Brewer's Original Question ("How should you set the odds?"). No bright-line rule of statistical significance can answer the brewer's question. As Gosset said way back in 1904, how you set the odds depends on "the importance of the issues at stake" (e.g., the expected benefit and cost) together with the cost of obtaining new material.

#### Billheimer, D., Predictive Inference and Scientific Reproducibility

- 1. Predict observable events or quantities that you care about.
- 2. Quantify the uncertainty of your predictions.

#### Manski, C., Treatment Choice With Trial Data: Statistical **Decision Theory Should Supplant Hypothesis Testing**

- 1. Statisticians should relearn statistical decision theory, which received considerable attention in the middle of the twentieth century but was largely forgotten by the century's end.
- 2. Statistical decision theory should supplant hypothesis testing when statisticians study treatment choice with trial data.
- 3. Statisticians should use statistical decision theory when analyzing decision making with sample data more generally.

#### Manski, C., and Tetenov, A., Trial Size for Near Optimal Choice between Surveillance and Aggressive Treatment: Reconsidering MSLT-II

- 1. Statisticians should relearn statistical decision theory, which received considerable attention in the middle of the twentieth century but was largely forgotten by the century's end.
- 2. Statistical decision theory should supplant hypothesis testing when statisticians study treatment choice with trial data.
- 3. Statisticians should use statistical decision theory when analyzing decision making with sample data more generally.

#### Lavine, M., Frequentist, Bayes, or Other?

- 1. Look for and present results from many models that fit the data well.
- 2. Evaluate models, not just procedures.

#### Ruberg, S., Harrell, F., Gamalo-Siebers, M., LaVange, L., Lee J., Price K., and Peck C., Inference and Decision-Making for 21st Century Drug Development and Approval

- 1. Apply Bayesian paradigm as a framework for improving statistical inference and regulatory decision making by using probability assertions about the magnitude of a treatment effect.
- 2. Incorporate prior data and available information formally into the analysis of the confirmatory trials.
- 3. Justify and pre-specify how priors are derived and perform sensitivity analysis for a better understanding of the impact of the choice of prior distribution.
- 4. Employ quantitative utility functions to reflect key considerations from all stakeholders for optimal decisions via a probability-based evaluation of the treatment effects.
- 5. Intensify training in Bayesian approaches, particularly for decision makers and clinical trialists (e.g., physician scientists in FDA, industry and academia).

#### van Dongen, N., Wagenmakers, E.J., van Doorn, J., Gronau, Q., van Ravenzwaaij, D., Hoekstra, R., Haucke, M., Lakens, D., Hennig, C., Morey, R., Homer, S., Gelman, A., and Sprenger, J., Multiple Perspectives on Inference for Two Simple Statistical **Scenarios**

- 1. Clarify your statistical goals explicitly and unambiguously.
- 2. Consider the question of interest and choose a statistical approach accordingly.
- 3. Acknowledge the uncertainty in your statistical conclusions.
- 4. Explore the robustness of your conclusions by executing several different analyses.
- 5. Provide enough background information such that other researchers can interpret your results and possibly execute meaningful alternative analyses.

### 7.5. Reforming Institutions: Changing Publication Policies and Statistical Education

Trafimow, D., Five Nonobvious Changes in Editorial Practice for Editors and Reviewers to Consider When Evaluating Submissions in a Post P < 0.05 Universe

- 1. Tolerate ambiguity.
- 2. Replace significance testing with a priori thinking.
- 3. Consider the nature of the contribution, on multiple levels.
- 4. Emphasize thinking and execution, not results.
- 5. Consider that the assumption of random and independent sampling might be wrong.

## Locascio, J., The Impact of Results Blind Science Publishing on Statistical Consultation and Collaboration

For journal reviewers

- 1. Provide an initial provisional decision regarding acceptance for publication of a journal manuscript based exclusively on the judged importance of the research issues addressed by the study and the soundness of the reported methodology. (The latter would include appropriateness of data analysis methods.) Give no weight to the reported results of the study per se in the decision as to whether to publish or not.
- 2. To ensure #1 above is accomplished, commit to an initial decision regarding publication after having been provided with only the Introduction and Methods sections of a manuscript by the editor, not having seen the Abstract, Results, or Discussion. (The latter would be reviewed only if and after a generally irrevocable decision to publish has already been made.)

#### For investigators/manuscript authors

- 1. Obtain consultation and collaboration from statistical consultant(s) and research methodologist(s) early in the development and conduct of a research study.
- Emphasize the clinical and scientific importance of a study in the Introduction section of a manuscript, and give a clear, explicit statement of the research questions being addressed and any hypotheses to be tested.
- 3. Include a detailed statistical analysis subsection in the Methods section, which would contain, among other things, a justification of the adequacy of the sample size and the reasons various statistical methods were employed. For example, if null hypothesis significance testing and *p*-values are used, presumably supplemental to other methods, justify why those methods apply and will provide useful additional information in this particular study.
- 4. Submit for publication reports of well-conducted studies on important research issues regardless of findings, for example, even if only null effects were obtained, hypotheses were not confirmed, mere replication of previous results were found, or results were inconsistent with established theories.

#### Hurlbert, S., Levine, R., and Utts, J., Coup de Grâce for a Tough Old Bull: "Statistically Significant" Expires

1. Encourage journal editorial boards to disallow use of the phrase "statistically significant," or even "significant," in manuscripts they will accept for review.

- 2. Give primary emphasis in abstracts to the magnitudes of those effects most conclusively demonstrated and of greatest import to the subject matter.
- 3. Report precise *p*-values or other indices of evidence against null hypotheses as continuous variables not requiring any labeling.
- 4. Understand the meaning of and rationale for neoFisherian significance assessment (NFSA).

#### Campbell, H., and Gustafson, P., The World of Research Has Gone Berserk: Modeling the Consequences of Requiring "Greater Statistical Stringency" for Scientific Publication

1. Consider the meta-research implications of implementing new publication/funding policies. Journal editors and research funders should attempt to model the impact of proposed policy changes before any implementation. In this way, we can anticipate the policy impacts (both positive and negative) on the types of studies researchers pursue and the types of scientific articles that ultimately end up published in the literature.

## Fricker, R., Burke, K., Han, X., and Woodall, W., Assessing the Statistical Analyses Used in Basic and Applied Social Psychology After Their p-Value Ban

- 1. Use measures of statistical significance combined with measures of practical significance, such as confidence intervals on effect sizes, in assessing research results.
- 2. Classify research results as either exploratory or confirmatory and appropriately describe them as such in all published documentation.
- 3. Define precisely the population of interest in research studies and carefully assess whether the data being analyzed are representative of the population.
- 4. Understand the limitations of inferential methods applied to observational, convenience, or other nonprobabilistically sampled data.

## Maurer, K., Hudiburgh, L., Werwinski, L., and Bailer J., Content Audit for p-Value Principles in Introductory Statistics

- 1. Evaluate the coverage of *p*-value principles in the introductory statistics course using rubrics or other systematic assessment guidelines.
- 2. Discuss and deploy improvements to curriculum coverage of *p*-value principles.
- Meet with representatives from other departments, who have majors taking your statistics courses, to make sure that inference is being taught in a way that fits the needs of their disciplines.
- 4. Ensure that the correct interpretation of *p*-value principles is a point of emphasis for all faculty members and embedded within all courses of instruction.

## Steel, A., Liermann, M., and Guttorp, P., Beyond Calculations: A Course in Statistical Thinking

- 1. Design curricula to teach students how statistical analyses are embedded within a larger science life-cycle, including steps such as project formulation, exploratory graphing, peer review, and communication beyond scientists.
- 2. Teach the *p*-value as only one aspect of a complete data analysis.

- 18 😉 EDITORIAL
- 3. Prioritize helping students build a strong understanding of what testing and estimation can tell you over teaching statistical procedures.
- 4. Explicitly teach statistical communication. Effective communication requires that students clearly formulate the benefits and limitations of statistical results.
- 5. Force students to struggle with poorly defined questions and real, messy data in statistics classes.
  - 5. Encourage students to match the mathematical metric (or data summary) to the scientific question. Teaching students to create customized statistical tests for custom metrics allows statistics to move beyond the mean and pinpoint specific scientific questions.

#### **Acknowledgments**

Without the help of a huge team, this special issue would never have happened. The articles herein are about the equivalent of three regular issues of The American Statistician. Thank you to all the authors who submitted papers for this issue. Thank you, authors whose papers were accepted, for enduring our critiques. We hope they made you happier with your finished product. Thank you to a talented, hard-working group of associate editors for handling many papers: Frank Bretz, George Cobb, Doug Hubbard, Ray Hubbard, Michael Lavine, Fan Li, Xihong Lin, Tom Louis, Regina Nuzzo, Jane Pendergast, Annie Qu, Sherri Rose, and Steve Ziliak. Thank you to all who served as reviewers. We definitely couldn't have done this without you. Thank you, TAS Editor Dan Jeske, for your vision and your willingness to let us create this special issue. Special thanks to Janet Wallace, TAS editorial coordinator, for spectacular work and tons of patience. We also are grateful to ASA Journals Manager Eric Sampson for his leadership, and to our partners, the team at Taylor and Francis, for their commitment to ASA's publishing efforts. Thank you to all who read and commented on the draft of this editorial. You made it so much better! Regina Nuzzo provided extraordinarily helpful substantive and editorial comments. And thanks most especially to the ASA Board of Directors, for generously and enthusiastically supporting the "p-values project" since its inception in 2014. Thank you for your leadership of our profession and our association.

# Retire statistical significance

Valentin Amrhein, Sander Greenland, Blake McShane and more than 800 signatories call for an end to hyped claims and the dismissal of possibly crucial effects.

hen was the last time you heard a seminar speaker claim there was 'no difference' between two groups because the difference was 'statistically non-significant'?

If your experience matches ours, there's a good chance that this happened at the last talk you attended. We hope that at least someone in the audience was perplexed if, as frequently happens, a plot or table showed that there actually was a difference.

How do statistics so often lead scientists to deny differences that those not educated in statistics can plainly see? For several generations, researchers have been warned that a statistically non-significant result does not 'prove' the null hypothesis (the hypothesis that there is no difference between groups or no effect of a treatment on some measured outcome)<sup>1</sup>. Nor do statistically significant results 'prove' some other hypothesis. Such misconceptions have famously warped the

literature with overstated claims and, less famously, led to claims of conflicts between studies where none exists.

We have some proposals to keep scientists from falling prey to these misconceptions.

#### PERVASIVE PROBLEM

Let's be clear about what must stop: we should never conclude there is 'no difference' or 'no association' just because a *P* value is larger than a threshold such as 0.05

or, equivalently, because a confidence interval includes zero. Neither should we conclude that two studies conflict because one had a statistically significant result and the other did not. These errors waste research efforts and misinform policy decisions.

For example, consider a series of analyses of unintended effects of anti-inflammatory drugs<sup>2</sup>. Because their results were statistically non-significant, one set of researchers concluded that exposure to the drugs was "not associated" with new-onset atrial fibrillation (the most common disturbance to heart rhythm) and that the results stood in contrast to those from an earlier study with a statistically significant outcome.

Now, let's look at the actual data. The researchers describing their statistically non-significant results found a risk ratio of 1.2 (that is, a 20% greater risk in exposed patients relative to unexposed ones). They also found a 95% confidence interval that spanned everything from a trifling risk decrease of 3% to a considerable risk increase of 48% (P = 0.091; our calculation). The researchers from the earlier, statistically significant, study found the exact same risk ratio of 1.2. That study was simply more precise, with an interval spanning from 9% to 33% greater risk (P = 0.0003; our

It is ludicrous to conclude that the statistically non-significant results showed "no association", when the interval estimate included serious risk increases; it is equally absurd to claim these results were in contrast with the earlier results showing an identical observed effect. Yet these common practices show how reliance on thresholds of statistical significance can mislead us (see 'Beware false conclusions').

These and similar errors are widespread. Surveys of hundreds of articles have found that statistically non-significant results are interpreted as indicating 'no difference' or 'no effect' in around half (see 'Wrong interpretations' and Supplementary Information).

In 2016, the American Statistical

Association released a statement in The American Statistician warning against the misuse of statistical significance and P values. The issue also included many commentaries on the subject. This month, a special issue in the same journal attempts to push these reforms further. It presents more than 40 papers on 'Statistical inference in the 21st century: a world beyond P < 0.05'. The editors introduce the collection with the caution "don't say 'statistically significant"33. Another article<sup>4</sup> with dozens of signatories also calls on authors and journal editors to disavow those terms.

We agree, and call for the entire concept of statistical significance to be abandoned.

"Eradicating categorization will help to halt **overconfident** claims. unwarranted declarations of 'no difference' and absurd statements about *'replication'* failure'."

We are far from alone. When we invited others to read a draft of this comment and sign their names if they concurred with our message, 250 did so within the first 24 hours. A week later, we had more than 800 signatories — all checked for an academic affiliation or other indication of present or past work

in a field that depends on statistical modelling (see the list and final count of signatories in the Supplementary Information). These include statisticians, clinical and medical researchers, biologists and psychologists from more than 50 countries and across all continents except Antarctica. One advocate called it a "surgical strike against thoughtless testing of statistical significance" and "an opportunity to register your voice in favour of better scientific practices".

We are not calling for a ban on *P* values. Nor are we saying they cannot be used as a decision criterion in certain specialized applications (such as determining whether a manufacturing process meets

some quality-control standard). And we are also not advocating for an anythinggoes situation, in which weak evidence suddenly becomes credible. Rather, and in line with many others over the decades, we are calling for a stop to the use of *P* values in the conventional, dichotomous way — to decide whether a result refutes or supports a scientific hypothesis<sup>5</sup>.

#### **QUIT CATEGORIZING**

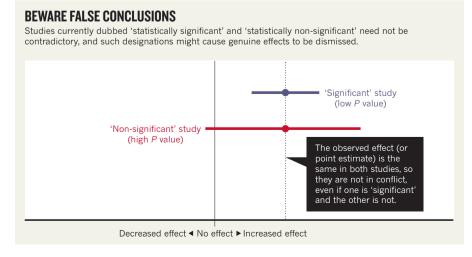

The trouble is human and cognitive more than it is statistical: bucketing results into 'statistically significant' and 'statistically non-significant' makes people think that the items assigned in that way are categorically different<sup>6-8</sup>. The same problems are likely to arise under any proposed statistical alternative that involves dichotomization, whether frequentist, Bayesian or otherwise.

Unfortunately, the false belief that crossing the threshold of statistical significance is enough to show that a result is 'real' has led scientists and journal editors to privilege such results, thereby distorting the literature. Statistically significant estimates are biased upwards in magnitude and potentially to a large degree, whereas statistically non-significant estimates are biased downwards in magnitude. Consequently, any discussion that focuses on estimates chosen for their significance will be biased. On top of this, the rigid focus on statistical significance encourages researchers to choose data and methods that yield statistical significance for some desired (or simply publishable) result, or that yield statistical non-significance for an undesired result, such as potential side effects of drugs — thereby invalidating conclusions.

The pre-registration of studies and a commitment to publish all results of all analyses can do much to mitigate these issues. However, even results from pre-registered studies can be biased by decisions invariably left open in the analysis plan<sup>9</sup>. This occurs even with the best of intentions.

Again, we are not advocating a ban on P values, confidence intervals or other statistical measures — only that we should not treat them categorically. This includes dichotomization as statistically significant or not, as well as categorization based on other statistical measures such as Bayes factors.

One reason to avoid such 'dichotomania' is that all statistics, including P values and confidence intervals, naturally vary from study to study, and often do so to a surprising degree. In fact, random variation alone can easily lead to large disparities in P values, far beyond falling just to either side of the 0.05 threshold. For example, even if researchers could conduct two perfect replication studies of some genuine effect, each with 80% power (chance) of achieving P < 0.05, it would not be very surprising for one to obtain P < 0.01 and the other P > 0.30.

Whether a *P* value is small or large, caution is warranted.

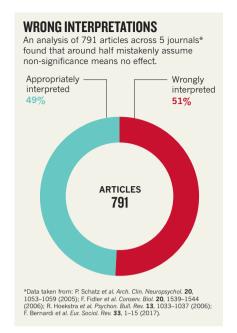

We must learn to embrace uncertainty. One practical way to do so is to rename confidence intervals as 'compatibility intervals' and interpret them in a way that avoids overconfidence. Specifically, we recommend that authors describe the practical implications of all values inside the interval, especially the observed effect (or point estimate) and the limits. In doing so, they should remember that all the values between the interval's limits are reasonably compatible with the data, given the statistical assumptions used to compute the interval<sup>7,10</sup>. Therefore, singling out one particular value (such as the null value) in the interval as 'shown' makes no sense.

We're frankly sick of seeing such nonsensical 'proofs of the null' and claims of non-association in presentations, research articles, reviews and instructional materials. An interval that contains the null value will often also contain non-null values of high practical importance. That said, if you deem all of the values inside the interval to be practically unimportant, you might then be able to say something like 'our results are most compatible with no important effect'.

When talking about compatibility intervals, bear in mind four things. First, just because the interval gives the values most compatible with the data, given the assumptions, it doesn't mean values outside it are incompatible; they are just less compatible. In fact, values just outside the interval do not differ substantively from those just inside the interval. It is thus wrong to claim that an interval shows all possible values.

Second, not all values inside are equally compatible with the data, given the assumptions. The point estimate is the most compatible, and values near it are more compatible than those near the limits. This is why we urge authors to discuss the point estimate, even when they have a large P value or a wide interval, as well as discussing the limits of that interval. For example, the authors above could have written: 'Like a previous study, our results suggest a 20% increase in risk of new-onset atrial fibrillation in patients given the anti-inflammatory drugs. Nonetheless, a risk difference ranging from a 3% decrease, a small negative association, to a 48% increase, a substantial positive association, is also reasonably compatible with our data, given our assumptions.' Interpreting the point estimate, while acknowledging its uncertainty, will keep you from making false declarations of 'no difference', and from making overconfident claims.

Third, like the 0.05 threshold from which it came, the default 95% used to compute intervals is itself an arbitrary convention. It is based on the false idea that there is a 95% chance that the computed interval itself contains the true value, coupled with the vague

feeling that this is a basis for a confident decision. A different level can be justified, depending on the application. And, as in the anti-inflammatory-drugs example, interval estimates can perpetuate the problems of statistical significance when the dichotomization they impose is treated as a scientific standard.

Last, and most important of all, be humble: compatibility assessments hinge on the correctness of the statistical assumptions used to compute the interval. In practice, these assumptions are at best subject to considerable uncertainty<sup>7,8,10</sup>. Make these assumptions as clear as possible and test the ones you can, for example by plotting your data and by fitting alternative models, and then reporting all results.

Whatever the statistics show, it is fine to suggest reasons for your results, but discuss a range of potential explanations, not just favoured ones. Inferences should be scientific, and that goes far beyond the merely statistical. Factors such as background evidence, study design, data quality and understanding of underlying mechanisms are often more important than statistical measures such as *P* values or intervals.

The objection we hear most against retiring statistical significance is that it is needed to make yes-or-no decisions. But for the choices often required in regulatory, policy and business environments, decisions based on the costs, benefits and likelihoods of all potential consequences always beat those made based solely on statistical significance. Moreover, for decisions about whether to pursue a research idea further, there is no simple connection between a *P* value and the probable results of subsequent studies.

What will retiring statistical significance look like? We hope that methods sections

and data tabulation will be more detailed and nuanced. Authors will emphasize their estimates and the uncertainty in them — for example, by explicitly discussing the lower and upper limits of their intervals. They will not rely on significance tests. When P values are reported, they will be given with sensible precision (for example, P=0.021 or P=0.13) — without adornments such as stars or letters to denote statistical significance and not as binary inequalities (P<0.05 or P>0.05). Decisions to interpret or to publish results will not be based on statistical thresholds. People will spend less time with statistical software, and more time thinking.

Our call to retire statistical significance and to use confidence intervals as compatibility intervals is not a panacea. Although it will eliminate many bad practices, it could well introduce new ones. Thus, monitoring the literature for statistical abuses should be an ongoing priority for the scientific community. But eradicating categorization will help to halt overconfident claims, unwarranted declarations of 'no difference' and absurd statements about 'replication failure' when the results from the original and replication studies are highly compatible. The misuse of statistical significance has done much harm to the scientific community and those who rely on scientific advice. P values, intervals and other statistical measures all have their place, but it's time for statistical significance to go. ■

7	in Human Ovarian Cell Cultures" 328	7	presentations, which were not intended for any
8		8	other purpose than for science day in the MDL.
9		9	And that's all I have to say on the
10		10	objections.
11		11	MR. ROTMAN: Go ahead.
12		12	MR. TISI: First of all, as you know,
13		13	many of those documents were documents that were
14		14	provided to counsel in connection with virtually
15		15	every depositions that have been taken to date.
16		16	In fact, it was provided with Dr. Mohrman that
17		17	was being taken at the same time today; it was
18		18	provided with Dr. Zelikoff earlier in the week;
19		19	it was provided almost routinely.
20		20	Many of them some of them,
21		21	particularly the Health Canada document, were
22		22	documents that only became available in mid
23		23	December, number one.
24		24	
			Number two, I believe that the science
25		25	day document that you're referring to, which I

And she brought the textbook with her today.  MR. KLATT: Can I just add we had an agreement for all the other depositions, and I assume we continue today, one objection by a party is good for all.  MR. TISI: That's fine, yes.  MR. ROTMAN: And, you know, just so it's clear to anybody reading the transcript that what you received yesterday was the third

- the first being with her report in November; the
   second being on January 4th, which was about ten
- <sup>3</sup> days before the deposition had been scheduled for
- <sup>4</sup> January 14th; and then these additional items
- <sup>5</sup> were materials that either were inadvertently
- left off or not reviewed until just very
   recently.
- 8 MS. AHERN: Okay. To the extent that
- <sup>9</sup> these new materials inform her substantive
- 10 opinions and were not included in her report or
- prior versions of the reference list, then we can
- 12 talk about that later --
- MR. TISI: Yeah.
- MS. AHERN: -- in terms of additional
- 15 time.
- And just to clarify, Steve, you said
- <sup>17</sup> that she reviewed one textbook. It looks like on
- 18 the list that I received, she reviewed the
- 19 second, fourth, and fifth editions of the
- 20 textbook --
- MR. ROTMAN: I was referring --
- MS. AHERN: -- or textbooks.
- MR. ROTMAN: I was referring to that as
- one textbook, yeah, but you're right, the
- <sup>25</sup> different editions. And she did bring with her
  - Page 15

- <sup>1</sup> today those materials.
- MS. AHERN: So she has a copy with her
- <sup>3</sup> today of all of the items listed in the
- <sup>4</sup> additional materials to Sarah Kane that was
- <sup>5</sup> served yesterday.
- 6 MR. ROTMAN: No.
- MS. AHERN: Okay. Do you know what
- she -- well, we can -- we'll find out.
- 9 MR. ROTMAN: Yeah.
- MS. AHERN: Okay. All right.
- SARAH E. KANE, M.D.,
- <sup>12</sup> having been duly sworn, after presenting
- identification in the form of a driver's license,
- <sup>14</sup> deposes and says as follows:
- DIRECT EXAMINATION
- <sup>16</sup> BY MS. AHERN:

25

- Q. Good morning, Dr. Kane.
- <sup>18</sup> A. Good morning.
- Q. Can you please state your name for the record?
- A. Sure. Sarah Kane.
- Q. And, Dr. Kane, who is your current employer?
- A. Commonwealth Pathology Partners.
  - Q. And do you have a business address at

- Page 16
- <sup>1</sup> Commonwealth Pathology Partners?
- A. The address we commonly use is 81
- <sup>3</sup> Highland Avenue, Salem, Massachusetts. It's <sup>4</sup> 01970.
- Q. Okay. And do you have any separate consulting business?
- A. No. Other -- outside of this type of
   medical expert witness work, no.
- Q. Okay. And how often do you do thissort of medical witness work?
- A. I am very new at it. I have done one deposition before in a tobacco case.
- Q. Okay. And the fees that you get from these cases, do they go directly to you or do
- they go to your -- Commonwealth PathologyPartners?
- A. They go directly to me.
- Q. And, Dr. Kane, you're a medical doctor; correct?
- <sup>20</sup> A. Yes.

- Q. And what is your medical specialty?
- A. I am board certified in anatomic and
- <sup>23</sup> clinical pathology and cytopathology, with
- <sup>4</sup> fellowship training in gynecologic pathology.
  - Q. Does that mean that you review
    - Page 17
- diagnostic materials, slides, and blocks that
- <sup>2</sup> have been taken from patient procedures and make
- <sup>3</sup> determinations regarding diagnosis?
  - A Yes
- Q. Do you see patients as part of your
- 6 medical practice?
- A. Yes. Occasionally, cytopathologists
- 8 sometimes perform a procedure that's called a
- <sup>9</sup> fine-needle aspiration. And so if a patient is
- seen in clinic and the clinician discovers a
- palpable nodule, I might be asked to go into the
- 12 room and perform a fine-needle aspiration.
  - Q. But you don't see patients in the sense that you don't counsel patients and provide ongoing care for an individual patient?
- A. Well, I mean, I guess my pathology
- 7 report is part of the -- basically speaks to
- <sup>18</sup> medical treatment and informs clinical treatment
- of the patient. So my pathology reports are seenby the patient.
- Q. I guess what I'm getting at is: Do you see patients as part of your practice, give them
- <sup>23</sup> a history and physical, provide ongoing care for
- them outside of the setting of a fine-needle
- <sup>25</sup> aspiration or a specific procedure related to a

Page 20 Page 18 <sup>1</sup> diagnosis? <sup>1</sup> aspiration, a blood transfusion reaction. 2 MR. ROTMAN: Is this working for you? Are there any others? 3 THE WITNESS: Oh, I'm sorry? A. I'm trying to think what another MR. ROTMAN: Is it working? 4 possibility might be. 5 THE WITNESS: Yes. I mean, I go into the operative room when 6 patients are in surgery sometimes with the MR. ROTMAN: Okay. A. Outside of the fine-needle aspiration surgeon to do intraoperative frozen sections, setting, the only time I might see a patient which are realtime diagnosis while the patient is would be with a blood transfusion reaction. I having a procedure. 10 might have to go to the floor to examine the Q. But you're interacting with the <sup>11</sup> patient or patient chart. physicians in that respect, aren't you, not with 12 Ongoing care for them outside of the setting the patient? 13 13 of a fine-needle aspiration, the nature of A. It can be both. 14 gynecologic pathology, sometimes I will see a Pap 14 MR. ROTMAN: Objection. Objection. 15 15 smear from a patient and then a cervical biopsy You can answer. <sup>16</sup> from a patient and then a LEEP from the patient, 16 MS. AHERN: You can answer. <sup>17</sup> and I might speak to the clinician about 17 A. The vast majority of the time I'm with 18 treatment algorithms, that kind of thing. frozen sections, I'm interacting with the 19 Q. Do you actually then go see the patient 19 surgeon. 20 themselves and discuss with them the results of 20 Q. Are there times where you are 21 their Pap smear or other testing? interacting with the patient during a surgical 22 A. Typically, no. procedure? 23 Q. Have you ever performed a history and 23 MR. ROTMAN: When you say physical in your practice as a pathologist? <sup>24</sup> "interacting," you mean having a conversation or A. Yes. do you mean having any kind of contact? Page 19 Page 21 Q. Under what circumstances? MR. KLATT: Steve, just limit the 1 2 <sup>2</sup> objection to "form." A. Under blood transfusion reactions. Q. And what sort of history and physical MR. ROTMAN: I'm trying to clarify. MR. KLATT: It doesn't matter. <sup>4</sup> do you take in relation to a blood transfusion reaction? BY MS. AHERN: A. Well, you might be looking at blood Q. Did you understand -pressure and review of the medical chart, MR. KLATT: Object to form. temperature, that kind of thing. Q. -- the question, Doctor? 9 O. So you review the medical chart. A. Let me -- can -- I'm sorry. Can you 10 Is that medical chart prepared by another 10 read it back or --11 11 Q. You said, "The vast majority of" -physician? 12 12 MR. ROTMAN: She's reading, I think. A. Usually, you're looking at 13 13 retrospective data at the time of the blood MS. AHERN: I'll withdraw the question transfusion reaction. and just remind you. 15 Q. How often will you see the same patient BY MS. AHERN: who has had a blood transfusion reaction? 16 Q. You said that the vast majority of the 17 A. Not very often. time you're interacting with the physicians; 18 Q. Okay. Do you ever counsel patients on 18 correct? 19 risk factors for ovarian cancer? A. Yes. 20 A. Have I ever? Probably, but in my Q. What do you mean by "interacting"? <sup>21</sup> day-to-day practice, I'm not seeing patients on a A. During the surgery, the surgeon might <sup>22</sup> regular basis to do that. 22 have me come up to the operative room or the Q. And the only time you see patients is 23 surgeon might come down to look at the tissue,

<sup>24</sup> with regard to specific issues that are within

<sup>25</sup> your realm of pathology expertise, a fine-needle

both grossly and under the microscope with me.

Q. Okay. Under those circumstances, would

1 you ever speak to the patient?

A. Usually not.

2

- Q. And if you -- have you ever spoken to a patient when you were reviewing frozen sections?
  - A. I might have during rapid reads of
- <sup>6</sup> fine-needle aspirations. So sometimes
- <sup>7</sup> interventional radiologists will do fine-needle
- 8 aspirations if they have to be ultrasound guided.
- <sup>9</sup> So, yes, I'm speaking to patients sometimes in
- 10 that situation and, obviously, when I do
- <sup>11</sup> fine-needle aspirations.
- 12 Q. Okay. But you don't have a group of patients that come to you for ongoing care and <sup>14</sup> see you in an office setting, do you?
- A. They are basically -- I would say it's <sup>16</sup> the equivalent of physician referral. So if a --<sup>17</sup> if a clinician is doing a biopsy -- I mentioned
- women with Pap smears and then cervical biopsies
- and then cone LEEPs, you know, it's a trajectory
- <sup>20</sup> of care, but it's physician referred for tissue.
- 21 Q. When you say "physician referred," what
- 22 do you -- what do you mean by that? Are you <sup>23</sup> interacting with the physician in providing
- <sup>24</sup> advice or recommendations or are you interacting
- <sup>25</sup> with the patients themselves and providing advice
  - Page 23

- <sup>1</sup> or recommendations?
- A. The physicians usually.
- 3 Q. Okay. So I'm asking about patients.
- A. Yeah.
- Q. On a given day -- like what are -- what 6 are the days that you're in the office?
  - A. Monday through Friday.
- Q. So are there days that you do 8
- particular tasks, administrative, and then days
- 10 that you do frozen sections or days that you do
- <sup>11</sup> just general pathology reads?
- 12 A. Rarely, I have an administrative day.
- 13 It would be nice to have more, but, typically, I
- <sup>14</sup> am looking at slides the majority of the day.
- I will be doing frozen sections on some <sup>16</sup> days, but we have a very collegial atmosphere, so
- 17 I might do frozens with another pathologist.
- <sup>18</sup> Some days I'm on cytology, so I'm doing the
- <sup>19</sup> fine-needle aspirations, which is either me
- <sup>20</sup> performing the fine-needle aspirations or me
- <sup>21</sup> reading a rapid interpretation that an
- <sup>22</sup> interventional radiologist has performed.
- Q. So on -- in a given week, it's not like
- you have a patient clinic where patients come to
- 25 see you and they're scheduled to see you.

- A. That's correct. They're not scheduled to see me.
- Q. Okay. And so outside of, like you
- mentioned, procedures like a fine-needle
- aspiration, you wouldn't generally see patients
- <sup>6</sup> directly.
- A. The fine-needle aspiration would be the
- only setting where they would have a scheduled,
- allotted slot time with me.
- Q. Okay. Generally speaking, when you're reviewing slides, what sort of medical records do
- you have available to you that are relevant to
- your clinical diagnosis?
  - A. I have the entire medical record
- available to me, whatever is in the hospital
- system for that patient.
- Q. What do you routinely rely on or review as part of your review of slides in terms of
- medical records?
- 20 A. Well, it's very patient dependent and
- <sup>21</sup> very diagnosis dependent, but, for example --
- <sup>22</sup> I'll stick to the example of cervical biopsy. So
- <sup>23</sup> I'll be looking -- if I have a cervical biopsy,
- <sup>24</sup> I'll look to see the patient's history of Pap
- <sup>25</sup> smears, HPV tests, that kind of thing.
- Page 25
- Q. Documents that are directly relevant to
- <sup>2</sup> your review of the current pathology; is that correct?
- A. For the most part, I would say so.
- Q. In other words, you don't go back
- through all of their physician records or
- gynecologic visits, their primary care physician
- records?
- A. Again, it would depend on the
- situation. I mean, if I have a lung tumor case,
- I'll probably be looking at the radiology, the
- radiology reports, the -- I'll pull up a report
- with a primary care physician to look for smoking
- history, that kind of thing, to put the whole
- piece together for the diagnosis.
- 16 Q. Okay. And, Doctor, you're here today to provide a deposition as an expert witness on
- behalf of the plaintiffs; is that correct?
- 19
  - A. Yes.

22

- 20 Q. And you said you've given one
- 21 deposition in the past?
  - A. Yes, that's correct.
- 23 Q. And what sort of case was that?
- 24 A. That was a tobacco case.
  - Q. Were you an expert in that case?

<sup>1</sup> A. Yes. It was an individual causation <sup>2</sup> case.

<sup>3</sup> Q. Okay. Were you an expert for the <sup>4</sup> plaintiffs or the defendants?

A. For the plaintiffs.

5

Q. And what sort of -- what sort of case was that in terms of the injury that was being alleged?

<sup>9</sup> A. It was a patient with lung cancer who was suing a tobacco company.

Q. And what was your specific -- what was your opinion in that case?

A. That it was highly likely that her long history of smoking caused her lung cancer.

Q. So -- and I should have gone over this with you in the beginning, but you're familiar with the deposition rules?

8 A. In general, I think.

<sup>19</sup> Q. Okay. You're doing a very good job.

<sup>20</sup> And the main things to remember is the two of us

 $^{21}$  will try not to speak over each other so that the

court reporter can take a clean transcript down.
 If you need a break at some time, that's

If you need a break at some time, that's
 fine, just let me know. All I ask is if there's

<sup>25</sup> a question pending, you go ahead and finish the

Page 26 MS. AHERN: You're welcome.

<sup>2</sup> BY MS. AHERN:

<sup>3</sup> Q. Dr. Kane, I've handed you a copy of

Page 28

Page 29

<sup>4</sup> your Notice of Deposition for today.

5 Have you seen this document before?

6 A. Yes.

Q. When did you see it?

8 A. I believe it was sometime in December,

<sup>9</sup> because the original deposition date was

<sup>10</sup> January 14th.

Q. And, Doctor, do you know whether you produced all of the documents that are responsive to the request in Exhibit 1, your deposition

4 notice?

MR. ROTMAN: We've objected to a number of them. And so she's producing -- you should go

17 item by item, I think, if you want to -- I'm

18 going to object otherwise.

Q. Doctor, do you know what you brought with you today?

A. Yes. We have my -- a copy of my

<sup>22</sup> updated CV. We have copies of my invoice. I

<sup>23</sup> believe I have a copy of -- oh, right. Sorry.

I have pages that I found for the Blaustein

second edition, which I don't have the actual

Page 27

- $^{\mbox{\scriptsize 1}}\,$  answer to the question and then we'll take a
- <sup>2</sup> break.

<sup>3</sup> If you don't understand a question that I

<sup>4</sup> ask you, please don't answer it. Let me know

<sup>5</sup> that you don't understand the question or you'd

6 like me to rephrase it and I'll be happy to do

<sup>7</sup> that. All right?

8 A. Okay.

<sup>9</sup> Q. Okay. And if you answer the question,

 $^{10}$  is it fair for me to assume that you understood

11 it?

14

- 12 A. Yes.
- Q. All right.

(Notice of Oral and Videotaped

Deposition of Sarah E. Kane and Duces Tecum
 marked Exhibit 1.)

17 BY MS. AHERN:

Q. Doctor, I'm handing you what's been marked as Exhibit No. 1 to your deposition.

MS. AHERN: I don't know how many

<sup>21</sup> people need copies of these. I don't have that

22 many, but --

MR. TISI: I'll take a copy. Thank

24 you.

25

MR. ROTMAN: Thank you.

<sup>1</sup> textbook. I believe I got -- I found this image

<sup>2</sup> off of the internet. But I do have the fourth

<sup>3</sup> and fifth editions of the Kurman Blaustein's

<sup>4</sup> textbook, and I've marked any relevant pages that

<sup>5</sup> I reviewed a couple of days ago.

MS. AHERN: If you --

7 MR. ROTMAN: One second.

8 MS. AHERN: It might be easier if you

<sup>9</sup> just hand me those and let me take a look.

MR. ROTMAN: In addition, there's the

boxes in the room that are the documents that

<sup>12</sup> were sent up by counsel from Ashcraft & Gerel.

MS. AHERN: Thank you.

BY MS. AHERN:

13

Q. All right, Doctor. So let's take these

<sup>16</sup> in order, I guess. Let's look at your --

MR. ROTMAN: She also has a copy of her report.

MS. AHERN: Okay. We'll mark your updated CV as Exhibit No. 2.

(Curriculum vitae of Sarah E.

Kane, M.D. marked Exhibit 2.)

23 BY MS. AHERN:

Q. Do you need a copy in front of you?

A. Sure.

- 1 Q. Okay.
- MS. AHERN: I don't know if anyone else
- <sup>3</sup> needs a copy.
- <sup>4</sup> BY MS. AHERN:
- Q. Doctor, Exhibit 2, this is a copy of
- 6 your current curriculum vitae?
- A. Yes. January 2019, yes, this is the
- 8 current.
- <sup>9</sup> Q. And can you tell me what has been
- 10 updated since you submitted your report
- <sup>11</sup> November 15th of 2018?
- A. I believe the only change is that I am
- 13 now director of cytopathology at North Shore
- 14 Medical Center, which includes Salem Hospital and
- <sup>15</sup> Union Hospital, which is in Lynn, Massachusetts.
- Q. Are there any additional publications
- 17 that you have included on your updated resume --
- 18 or, sorry, updated CV?
- <sup>19</sup> A. I don't believe so.
- Q. The only change is that your position
- <sup>21</sup> has changed to director?
- A. Yes, of cytopathology.
- Q. Okay. And you've also brought with you
- 24 invoices --
- 25 A. Yes.

- <sup>1</sup> June 16th, which is the last date. So it would
  - <sup>2</sup> have been after June 16th, 2017.
  - Q. I'm sorry. Do you remember when you
  - 4 were retained by the plaintiffs to be an expert
  - <sup>5</sup> in this litigation?
  - A. I believe I was contacted by Mr. Rotman
  - <sup>7</sup> in early May of 2017.
  - 8 Q. Okay. Do you know how Mr. Rotman found

Page 32

Page 33

- <sup>9</sup> your name?
- A. I believe he was referred by a
- 11 colleague.

12

13

15

21

- Q. Do you remember what colleague that is?
- A. Dr. Paul Michaels.
- Q. And is Dr. Michaels a pathologist?
  - A. Yes.
- Q. Where does Dr. Michaels work?
- A. I actually don't know the name of his
- 18 group, but he is in Austin, Texas now.
- <sup>19</sup> Q. Where was he in 2017?
- A. Austin, Texas, I believe.
  - Q. Okay. Is he a gynecologic pathologist?
- 22 A. No.
- Q. What type of pathologist is he?
  - A. He has a cytopathology fellowship, in
- <sup>25</sup> addition to anatomic and clinical board

Page 31

- Q. -- for your time spent on talc?
- <sup>2</sup> A. I handed them to her. Yes.
- MR. ROTMAN: What we handed, I think,
- <sup>4</sup> is multiple copies, so you can hand one back, I
- <sup>5</sup> suppose.
- 6 MS. AHERN: We'll mark as Exhibit 3 to
- <sup>7</sup> your deposition an invoice for rendered services.
- 8 (Invoice from Sarah Kane, M.D.,
- 9 for services 5/19 through 7/14 marked
- Exhibit 3.)
- MS. AHERN: I can't see a date, but it
- 12 looks like it covers -- well, let's just have you
- 13 look at it.
- 14 BY MS. AHERN:
- Q. Can you tell me the date range covered
- 16 by that invoice?
- MR. ROTMAN: Copy for me?
- A. Yes. It looks like it is from May 19th
- <sup>19</sup> to June 16th. That would be -- if this is the
- <sup>20</sup> first invoice, I believe, that would be of 2017,
- <sup>21</sup> year 2017.
- Q. Okay. And, Doctor, was this May 19,
- <sup>23</sup> 2017 -- how long after you were retained did you
- 24 submit this invoice?
- A. I wouldn't have sent it until after

<sup>1</sup> certification.

- Q. And how do you know Dr. Michaels?
- 3 A. We were residents and fellows together.
- 4 Q. Were you -- fellows where? Mass
- 5 General?
- 6 A. At Massachusetts General, yes.
- Q. Was he in the gynecologic pathology
- 8 fellowship with you or a different fellowship?
- A. So my fellowship was kind of
- 10 interesting. I was, unfortunately, one of the
- 11 last groups where a combined anatomic and
- 12 clinical pathology residency was five years. I
- 13 think the next year after I began residency they
- <sup>14</sup> dropped it to four years.
- So my surgical pathology and cytopathology,
- 16 it was a two-year fellowship. The gyn path and
- the cytopathology, it was over a two-year period.
- 18 And the weeks of gynecologic pathology were mixed
- with weeks of cytopathology, so they spread out
- 20 the cytopathology fellowship over two years.
- Paul was a cytopathology fellow the first
- 22 year of my fellowship, so we did all four years
- of anatomic and clinical pathology and then the
- <sup>24</sup> first year of fellowship at the same time.
- Q. Okay. And looking back at Exhibit 3,

- 1 this invoice from May 19, 2017, to July 14 of
- <sup>2</sup> 2017, the first entry looks like it's -- it
- <sup>3</sup> covers a period of May 19th through July 14th,
- 4 "Communication with firm regarding talc
- <sup>5</sup> litigation case, one hour"; is that correct?
- A. Yes. Sorry. Thank you for correcting
- 7 me. I saw the last line, 6/16, and figured that
- 8 was the last day that this covered. But you're
- <sup>9</sup> correct, it's -- July 14th would have been the
- 10 last date that this invoice covered.
- 11 Yes, June 16th I met with Mr. Rotman,
- 12 Dr. Thompson, and Mr. Soileau -- I don't know how
- 13 to pronounce his last name.
- 14 Q. Are they all -- they're all attorneys;
- 15 correct?
- 16 A. Correct.
- 17 Q. Okay. What firm?
- A. I know Mr. Rotman is with Hausfeld.
- 19 Dr. Thompson is with Allen Beasley. I don't know
- for sure where Mr. Soileau is from.
- 21 Q. You said Mr. Thompson is with Beasley
- 22 Allen.
- 23 A. I believe so. I don't remember for
- 24 certain.
- 25 Q. And at least during --

- So those hours overlap a little bit. I
- <sup>2</sup> mean, I kept track of particular hours so that I

Page 36

Page 37

- <sup>3</sup> could bill accurately, but those two things --
- 4 certainly, generating the medical expert report
- would also include review of medical literature.
- Q. Okay. So you started on your -- on the
- draft of your expert report in this case back in
- May of 2017; is that correct?
  - A. Late May, yes.
- Q. And did you -- do you remember when you
- started your review of the medical literature?
- 12 Would it have been May 20th, as reflected in this
- invoice, Exhibit 3?
- 14 A. Yes, I believe so.
  - Q. You also have on here that you spent
- some time researching electron microscopy
- experts.

15

18

- A. Yes.
- 19 Q. Was that at the request of the
- plaintiffs' counsel?
- 21 A. Plaintiffs' counsel was looking for
- additional people because there are very few
- electron microscopy units in the country and very
  - few expert electron microscopists.
  - I can't remember if they asked me to or I

Page 35

- 1 MR. ROTMAN: It's Ms. Thompson.
- 2 MS. AHERN: Ms. Thompson.
- MR. ROTMAN: Or Dr. Thompson. 3
- THE WITNESS: Doctor. She's a -- she's
- a doctor, as well as an attorney.
- 6 Q. And for this first invoice, you billed
- 7 \$26,666.67; correct?
- 8 A. Yes.
- 9 Q. And you spent a total of 53 hours and
- <sup>10</sup> 20 minutes working on talc-related issues?
- 11 A. Yes.
- 12 Q. Seventeen hours and five minutes of
- 13 that was reviewing the medical literature, expert
- reports, and testimony; is that correct?
- A. So this was my first time ever
- <sup>16</sup> recording any sort of invoice for medical expert
- witness work, so the review of medical
- <sup>18</sup> literature, expert reports, and testimony,
- 19 probably some of that will also be included in
- <sup>20</sup> the generating of medical expert report, because
- <sup>21</sup> while I was -- I basically began -- you can see
- <sup>22</sup> from the dates I pretty much started drafting,
- 23 taking notes in a draft, around May 28th, which
- <sup>24</sup> was soon after I did my initial medical
- <sup>25</sup> literature searches.

- <sup>1</sup> offered to. It could have been the latter. But
- <sup>2</sup> I was aware that they were looking for additional
- people to potentially use electron microscopy.
- Q. Do you know how plaintiffs intended to
- use the electron microscopy experts?
- MR. ROTMAN: Objection. That's going
- into areas that you're not entitled to, so she's
- not going to answer that.
- BY MS. AHERN:
- Q. Doctor, what sort of electron
- microscopists were you looking for at the
- plaintiffs' request?

- MR. ROTMAN: Same objection.
- MS. AHERN: I'm not asking her about
- communications that she had with counsel; I'm
- 16 asking her what sort of work --17
  - MR. ROTMAN: Your question --
- 18 MS. AHERN: -- she did --19
  - MR. ROTMAN: Your question --
- MS. AHERN: -- that she was paid for by
- the plaintiffs' counsel and that's reflected on
- the invoice that you've submitted here today.
- MR. ROTMAN: You are asking her what she was doing at plaintiffs' counsel's request.
- 25 That's unrelated to her --

Page 40 Page 38 1 MS. AHERN: You're --<sup>1</sup> P-E-T-U-R. 2 MR. ROTMAN: -- opinions. Q. N-I-E-, Nielsen? 3 MS. AHERN: -- instructing her not to 3 A. I believe so. 4 answer the question of, "Doctor, what sort of Q. -S-S-O-N? electron microscopists were you looking for at A. No, -L-S-E-N. plaintiffs' request?" Q. Did you speak to Dr. Nielsen about MR. ROTMAN: Yes. I'm objecting to potentially working on the talc litigation? 8 that. A. I believe I e-mailed him. 9 Q. Do you remember when that occurred? MR. KLATT: That's not a communication. A. It was probably -- I don't remember 10 MS. AHERN: That's not a communication. 11 That is what did she do and what was she looking exactly, but I would imagine it was between 5/22 and 6/1 of 2017. <sup>12</sup> for. 13 13 MR. TISI: It's consulting. Q. And was he interested in doing any talc MS. AHERN: She's sitting here today as 14 14 work? 15 <sup>15</sup> a testifying expert. A. He was not interested in doing medical 16 MR. ROTMAN: Understood. She's not expert witness or consulting work. Q. Did you e-mail anybody else, any other going to answer that. BY MS. AHERN: electron microscopists? MR. ROTMAN: So you keep on asking her 19 Q. Doctor, did you make any <sup>20</sup> recommendations regarding electron microscopists? <sup>20</sup> about the consulting work that she was doing that 21 A. No, ultimately, I did not give them any 21 had nothing to do with her opinions in this case, <sup>22</sup> which is why we're here today. We're not here 22 names. 23 23 today for you to take the deposition of her Q. What electron microscopists were you <sup>24</sup> looking at when you were conducting your <sup>24</sup> consulting work at that stage on this issue, so 25 that whole area is off limits and I'm instructing 25 research? Page 39 Page 41 <sup>1</sup> her not to answer. If you want to continue MR. ROTMAN: Again, this is her work <sup>2</sup> on -- as a consultant not relating to her <sup>2</sup> asking those questions, I'm going to continue to opinions in this case --<sup>3</sup> object on the same basis. Q. Doctor, did you contact any electron Q. Doctor, do you --MR. ROTMAN: -- so you're not entitled microscopists who agreed to work on the talc <sup>6</sup> to this information. litigation? 7 MS. AHERN: You're instructing her not MR. ROTMAN: Objection. 8 Instruct you not to answer for the to answer. 9 MR. ROTMAN: Yes. reasons previously provided. 10 10 Q. Doctor, do you know a Dr. Campion? MS. AHERN: Then instruct her not to 11 11 A. I do not. answer. 12 12 MR. ROTMAN: I'm instructing you not to Q. Do you know a Dr. John Godleski? 13 A. I know the name. I do not know him 13 answer. 14 THE WITNESS: Okay. personally. 15 15 BY MS. AHERN: Q. Do you know Bill Welch? 16 16 Q. Doctor, do you know any electron A. I know the name. I do not know him microscopists? 17 17 personally. 18 A. Yes. 18 Q. Okay. 19 19 Q. Who? (Invoice from Sarah Kane, M.D., A. I know Dr. Gunnlaugur Nielsen at 20 for services 7/28 through 9/12 marked <sup>21</sup> Massachusetts General Hospital. 21 Exhibit 4.) Q. How do you spell Gunnlaugur's name? 22 BY MS. AHERN: 23 23 A. G-U-N-N -- I believe there are two Q. Doctor, I'm handing you what's been <sup>24</sup> Ns -- L-A-U-G-H-E-R [sic], Nielsen. That's with 24 marked as Exhibit 4 to your deposition. 25 <sup>25</sup> an S-E-N. But he goes by Petur, which is Can you tell me what that is?

- A. This is probably the second invoice.
- <sup>2</sup> Again, I don't believe I had it numbered on the
- <sup>3</sup> actual invoice, but this looks like it would be
- <sup>4</sup> the second invoice.
- Q. And what period of time does Exhibit 4cover?
- A. This covers July 28th to September 12.
- <sup>8</sup> Q. Is this 2017?
- 9 A. Yes.

1

- Q. And you spent an additional 37 hours
- and 40 minutes reviewing literature and
- generating your expert report; is that correct?
- A. Right. And you'll see I actually
- 14 combined everything, because it got too
- 15 complicated to separate them out. And generating
- <sup>16</sup> the medical expert report was sort of this
- <sup>17</sup> organic part of reviewing the literature.
- <sup>18</sup> Q. And the total bill was for \$19,666.67;
- 19 correct?
- 20 A. Yes.
- Q. Okay. Was all your time on Exhibit 4
- <sup>22</sup> spent working on your MDL report?
- A. I'm sorry. This invoice?
- Q. Yes, ma'am. Was the time spent on
- <sup>25</sup> Exhibits 3 and 4, these first two invoices, was

- Page 44
- Q. Who's been your primary contact?
   A. Mr. Rotman.
- <sup>3</sup> Q. Okay. And a total for that bill was
- 4 \$13,835; is that correct?
- <sup>5</sup> A. Yes.
- <sup>6</sup> (Invoice from Sarah Kane, M.D.,
- <sup>7</sup> for services 2/23/18 through 8/3/18 marked
- 8 Exhibit 6.)
- <sup>9</sup> BY MS. AHERN:
- O Q. I'm handing you what's been marked as
- <sup>11</sup> Exhibit 6 to your deposition.
- 12 Can you tell me what that document is,
- 13 please?
- A. So this -- I'm counting now -- looks
- 15 like this is the fourth invoice -- yes, the
- <sup>16</sup> fourth invoice that I sent them.
- Q. And what period of time does this
- <sup>18</sup> Exhibit 6 cover?
- A. It looks like February 23rd, 2018,
- <sup>20</sup> through August 7th, 2018.
  - Q. Okay. And Exhibit 6 reflects that you
- <sup>22</sup> spent an additional 16 hours and 55 minutes
- 23 reviewing literature and generating your medical

Page 45

- <sup>24</sup> expert report; is that correct?
- A. Yes.

Page 43

- <sup>1</sup> this all in relation to your work on the talc
- <sup>2</sup> MDL?
- <sup>3</sup> A. Yes. I'm not involved in any other
- <sup>4</sup> talc litigation.
- <sup>5</sup> Q. Okay.
- MS. AHERN: Okay. I'm marking
- <sup>7</sup> Exhibit 5 as -- oh, I'm marking, sorry, your
- 8 third invoice as Exhibit 5 to your deposition.
- <sup>9</sup> (Invoice from Sarah Kane, M.D.,
- for services 9/18/17 through 2/5/18 marked
- <sup>11</sup> Exhibit 5.)
- 12 BY MS. AHERN:
- Q. This is a copy of an invoice submitted
- 14 by you; correct?
- 15 A. Yes.
- Q. And what dates does it cover?
- A. This covers September 18th, 2017, to
- <sup>18</sup> February 5th, 2018.
- Q. You spent an additional 27 hours and 40
- <sup>20</sup> minutes working on your report; is that correct?
- A. Yes. Well, 21 hours, 55 minutes
- <sup>22</sup> reviewing the literature and the medical expert
- <sup>23</sup> witness report, and then there were a few hours
- <sup>24</sup> communicating and meeting with the firm, which
- <sup>25</sup> would likely be Mr. Rotman.

- Q. And 3 hours and 30 minutes
- <sup>2</sup> communicating or meeting with the law firms
- <sup>3</sup> involved.
  - A. Correct.
- <sup>5</sup> Q. Okay. And the total for that invoice
- 6 was \$10,208; correct?
  - A. Correct.
  - Q. Okay. I'm handing you what's been
- <sup>9</sup> marked as Exhibit 7 to your deposition.
  - (Invoice from Sarah Kane, M.D.,
- <sup>11</sup> for services 9/20/18 through 11/16/18
- marked Exhibit 7.)
- 13 BY MS. AHERN:
- Q. And this is another invoice prepared by
- 15 you?

20

25

- 16 A. Yes.
- Q. And the period of time that is covered
- appears to be September 20th, 2018, through
- <sup>19</sup> November 16th of 2018; is that right?
  - A. Yes.
- Q. And you spent an additional 71 hours
- and 5 minutes reviewing materials and generating
- <sup>23</sup> your expert report?
- <sup>24</sup> A. Yes.
  - Q. And about four-and-a-half hours

1 communicating with the law firms involved?

- <sup>2</sup> A. That's correct.
- <sup>3</sup> Q. For a total of \$37,791.67?
- 4 A. Yes.
- <sup>5</sup> Q. Doctor, do you have any -- this takes
- 6 us through -- this last invoice, Exhibit 7, takes
- <sup>7</sup> us through November of 2018.
- 8 You've done additional work since November
- 9 of 2018; correct?
- 10 A. I have.
- Q. Do you know how much time you have yet
- 12 to invoice or -- sorry, let me back up. Withdraw
- 13 that.
- Have you sent another invoice to plaintiffs'
- 15 counsel?
- 16 A. I have not.
- Q. Okay. Do you have any idea how many
- 18 hours you have yet to invoice?
- A. I have not added it up. I don't really
- 20 have a ballpark. Maybe -- I would just be
- 21 guessing. I haven't added it up, to be honest.
- Q. Do you know how much money you've made
- <sup>23</sup> to date, totaling all of these together?
- 4 MR. ROTMAN: Objection.
- Q. How much money -- how much money have

- <sup>1</sup> and produce it to one of the attorneys involved?
- 2 A. Sure.
- <sup>3</sup> Q. Thank you.
- 4 MR. ROTMAN: She'll find it if it
- <sup>5</sup> exists. She'll look for it.
  - MS. AHERN: Clearly.
- 7 MR. ROTMAN: She didn't testify that
- 8 she produced a fee schedule; she said she
- believed she did.
- MS. AHERN: Understood. If she finds
- <sup>11</sup> it --
- MR. ROTMAN: Yeah.
- MS. AHERN: -- she'll produce it to you
- <sup>14</sup> and you'll produce it to us.
- MR. ROTMAN: Exactly.
- 16 BY MS. AHERN:
- Q. Doctor, how much -- I mean, how do you
- 18 keep track of your time? Do you have a
- 19 spreadsheet? Do you have some process where you
- log your hours?
- A. I keep a list, an electronic list.
- <sup>22</sup> It's not an Excel, but it's just a list.
- Q. So is it just a Word document and you
- 24 put your time entries in and multiply that by
- <sup>25</sup> your hourly rate?

Page 47

- $^{\, 1} \,$  you made in fees associated with your talc work
- <sup>2</sup> to date?
- <sup>3</sup> A. I would need a calculator to add it all
- <sup>4</sup> up, but this would be the full amount, all added
- <sup>5</sup> together.
- <sup>6</sup> Q. And, Doctor, you're charging \$500 an
- <sup>7</sup> hour; correct?
- 8 A. Yes.
- <sup>9</sup> Q. Did you ask for a retainer when you
- <sup>10</sup> were initially asked to get involved in the case?
- <sup>11</sup> A. I did not.
- Q. Were you offered a retainer?
- <sup>13</sup> A. It wasn't discussed.
- Q. Does the amount that you charge or your
- 15 fee, does that change with the activity that
- <sup>16</sup> you're performing?
- A. No. I think I had a fee schedule where
- trial might be on a per-day basis, but I don't
- <sup>19</sup> remember what that is.
- Q. Did you actually submit a written fee
- schedule to the plaintiffs' counsel?
   A. I believe I did at some point.
- MR. ROTMAN: I don't know. I don't
- <sup>24</sup> recall that.

25

Q. Could you find a copy of that, please,

- A. Basically.
- 2 Q. And do you generate the invoices
- <sup>3</sup> yourself?
- 4 A. I do.
- Q. Is that through some sort of program or
- <sup>6</sup> is this just a Word document that you created and
- <sup>7</sup> you plug the information in?
  - A. It's just a Word document.
- 9 (Discussion off the record.)
- 10 BY MS. AHERN:

16

25

- Q. So, Doctor, other than the folders that
- <sup>12</sup> we've just gone through, is there anything
- 13 related to your opinions in this case that you
- did not bring with you to the deposition today?
- MR. ROTMAN: Objection.
  - Q. Start with that.
- MR. ROTMAN: Objection.
- A. I believe I brought all of the
- 19 literature cited in the initial reports. I've
- <sup>20</sup> tried to be complete, as you know, with listing
- <sup>21</sup> everything that I've reviewed. It's possible
- there might have been some things that I reviewed
- 23 that I forgot to put on a list, but I've tried to
- <sup>24</sup> be as complete as possible.
  - Q. How did you track your literature

Page 50 1 reviews? MR. KLATT: Chris, let me just clarify. A. So when I was writing the report, <sup>2</sup> There's four blue cardboard TLS boxes --<sup>3</sup> you'll notice the first reference list is a list MR. TISI: Correct. 4 of papers that I actually cited in the text of 4 MR. KLATT: -- that you're referring <sup>5</sup> the report, and then I had -- any papers that I to? <sup>6</sup> reviewed or other data that I reviewed, I kept in MR. TISI: Correct. 6 MR. KLATT: And they have binders in <sup>7</sup> folders on my computer. Unfortunately, I had two hard drives them? <sup>9</sup> malfunction while I was in the process of writing MR. TISI: They have binders in them. 10 this report. Luckily, I backed up most of it, so <sup>10</sup> And I haven't even looked at them because they 11 it's possible a few things didn't get documented, <sup>11</sup> were sent out from the Ashcraft office, but my 12 ultimately, but I really tried my best to make it 12 understanding -- and you can crack them open at 13 complete and accurate, and that's why you got break -- but my understanding is there are copies <sup>14</sup> another list yesterday. of those. I don't know how many. So it's four 15 boxes, but there are duplicates in there. Q. Okay. And, I'm sorry, we forgot to mark some of these. 16 But they are -- if I understand -- and 17 And so can you tell me -- this is something I can correct them on a break -- if I understand 18 you brought with you today? them, they are copies of the references. We did 19 A. Yes. not make copies -- or they did not make copies of the materials that were considered but not 20 MR. TISI: Can I -- and he's defending the deposition; I just have a little more referenced in the reports. knowledge of the documents and how they -- at 22 Do you follow what I'm saying? 23 MR. KLATT: Yeah. What I want to least I think I do. 24 I think that in the boxes here are the 24 clarify is the four boxes here have not been in <sup>25</sup> references cited. The materials considered, I <sup>25</sup> Dr. Kane's possession, so there's no notations, Page 51 Page 53 <sup>1</sup> don't think we printed out. I don't think those <sup>1</sup> highlighting, stickies --<sup>2</sup> are in the boxes. And so I don't want there to MR. TISI: Oh, no. <sup>3</sup> be any -- there are documents she reviewed that MR. KLATT: -- that she -- that <sup>4</sup> are not here that are not referenced, but were <sup>4</sup> Dr. Kane herself would have put on what's in the identified in that list. 5 boxes --6 Does that make sense? MR. TISI: No. Those were print---7 MS. AHERN: Maybe. I'm going to go MR. KLATT: -- is that correct? through the various reference lists with her --MR. TISI: Correct. Those were printed 9 out by the plaintiffs' steering committee. MR. TISI: Okay. 10 MS. AHERN: -- and we can kind of Basically, we took her reference list and printed clarify as we go. them out for you all. There's no -- there are no 12 MR. TISI: Like, for example, I mean, I notes from her or anything like that. 13 13 just -- I'm just using an example -- we What I don't think we printed out for <sup>14</sup> supplemented with some Health Canada materials. you would be the extensive documents that she <sup>15</sup> I don't know if she brought those with her, <sup>15</sup> reviewed, including the supplemental materials <sup>16</sup> because they were not in the original report. 16 that were identified, and then put them -- we can 17 They weren't available at the time, so they would provide those in a -- you know, on a thumb drive 18 not be in the reference materials that are in the <sup>18</sup> if you want to. It's just in these depositions <sup>19</sup> binders. <sup>19</sup> we've had so far, half the time the boxes aren't 20 I know you haven't cracked open the even opened, and we didn't want to just create 21 boxes, but I don't want there to be any paper for the purpose of creating paper. But if 22 misimpression. So in terms of what they are, you you want, we can pull those for you and put them

23

in a Dropbox or whatever.

I don't want to waste your time,

<sup>25</sup> because I do want there to be -- because she

<sup>25</sup> her. Do you know what I'm saying?

23 can certainly ask her, but she may not know what

24 is in the boxes, because we printed them out for

- <sup>1</sup> doesn't necessarily know what was printed out for <sup>2</sup> her.
- 3 MS. AHERN: Understood. So let's --
- 4 MR. TISI: I'm sorry if I --
- 5 MS. AHERN: That's okay.
- 6 MR. TISI: -- took up time.
- 7 (Excerpt from Blaustein's Second
- 8 marked Exhibit 8.)
- BY MS. AHERN:
- Q. Doctor, I'm handing you what's been <sup>11</sup> marked as Exhibit 8 to your deposition.
- 12 A. Yes.
- 13 Q. Is this something that you brought with
- 14 you today in response to the Notice of
- 15 Deposition?
- 16 A. It's something I brought because I
- <sup>17</sup> reviewed it a couple days ago. It probably falls
- <sup>18</sup> within the deposition. I know you wanted to see
- <sup>19</sup> everything that I reviewed.
- 20 Q. So, first of all, tell me what this is.
- 21 What is Exhibit 8?
- 22 A. This is a page from Blaustein's second
- <sup>23</sup> edition of the Pathology of the Female Genital
- <sup>24</sup> Tract.
- 25 Q. Do you know what page it is?

- Page 56 Q. And, Doctor, the additional materials
- <sup>2</sup> to -- of Dr. Sarah Kane that were provided to us
- <sup>3</sup> yesterday, you list "Kurman defense report" from
- <sup>4</sup> a case by the name of Ristesund.
- Did you not receive that?
  - A. I asked for -- yeah, I did receive
- that.
- Q. You received it?
- MR. ROTMAN: What she -- what she was
- saying is she --
- 11 MS. AHERN: Wait. I'm asking her the <sup>12</sup> question.
- Q. Did you receive the report, the Kurman defense report, from a case by the name of
- 16 A. Yes. I had requested a defense report written by Kurman, if they had anything, and that
- is what I received.
- 19 Q. Okay. I thought just a minute ago you
- said you had not received one because it wasn't available to you.
- 22 A. I'm talking about the MDL, the curr---
- 23 Q. Ah.
- 24 A. -- the current defense expert witness
- 25 reports.

Page 55

- A. Unfortunately, it is cut off. This --
- <sup>2</sup> I don't have this textbook. I found this, I
- <sup>3</sup> think, on Google Books, actually.
- Q. And so why are you bringing it today
- 5 again?
- A. Because I reviewed it.
- Q. Okay. And why did you review this?
- A. Well, I recently became aware that
- <sup>9</sup> Dr. Kurman is a medical expert witness for the
- <sup>10</sup> defense, so I was more curious. I actually asked
- 11 the plaintiffs' attorneys for a report -- any
- 12 report that Dr. Kurman had done, because I was
- 13 trying to understand his -- what his viewpoint
- 14 might be. I don't have his defense report
- <sup>15</sup> because they're not available to us yet, but I
- <sup>16</sup> was trying to get a sense for what defense
- <sup>17</sup> medical experts -- their viewpoints.
- And so I did a search for, basically, "talc"
- <sup>19</sup> and "Kurman" and I found this (indicating). And
- 20 then I have two other editions, so I looked
- 21 through my other editions for any references to
- <sup>22</sup> talc. Because Kurman edited the fourth and fifth
- <sup>23</sup> edition. I do not believe he edited the second
- <sup>24</sup> edition, which is -- this one page is from
- <sup>25</sup> (indicating).

- Q. Okay.
- A. Yeah.
- Q. Thank you for the clarification.
- So you have seen at least one defense report

- that was written by Dr. Bob Kurman; right?
- A. Yes.
- Q. And did you -- do you know Dr. Robert
- Kurman, either personally or by reputation?
- A. By reputation and I've gone to dinner
- 10 with him before, but I don't know him well.
- 11 Q. And what do you know about Dr. Kurman?
- 12 A. So he is a well-known gynecologic
- pathologist out of -- he was out of Johns
- Hopkins. I believe he recently retired.
- But he certainly edited one of the main
- gynecologic pathology textbooks and was -- you
- know, published quite a bit in gynecologic
- pathology, so his name is well known in our community. 19
- Q. And you've actually cited to a number 21 of his papers in your report; correct?
- 22 A. Yes, I'm sure I have. I know at least
- 23 one or two. 24 Q. And Dr. Kurman was a Robert Scully
- <sup>25</sup> fellow, as well, wasn't he?

A. I actually don't remember if he trained under Scully. It's possible. I don't remember whether or not he did.

Q. Okay. This Exhibit 8 that you brought with you today, are you bringing it here because it mentions granulomatous endometritis caused by foreign bodies?

8 A. It says, "Talc may be introduced into
9 the endometrial cavity by instruments
10 contaminated with talcum powder or by gloves
11 during a pelvic examination. Patients may be

asymptomatic or may present with menorrhagia.
 Microscopically, the extent of the granulomatous

14 inflammatory reaction depends on the quantity of

 $^{15}$  the talc inoculated. The infiltrate is

<sup>16</sup> characterized by histiocytes and foreign-body

17 multinucleated giant cells surrounded --

 $^{18}\,$  surrounding the talc crystals, along with

 $^{19}\,$  lymphocytes and plasma cells. The crystals

 $^{20}\,$  appear as refractile, birefringent, needle-like,

or fan-shaped splinters in polarizing light."
 Q. Are you familiar with the type of

<sup>23</sup> reactions -- tissue reactions that are elicited

24 by talc in tissue?

A. I know -- I'm aware that you can get

A. I'm not really sure what you mean by

<sup>2</sup> "types." You mean foreign body versus infectious

Page 60

Page 61

<sup>3</sup> versus --

Q. Yes.

A. Those would be the top of the list.

Q. And are there subtypes of granulomatous

<sup>7</sup> inflammation within those categories?

A. Well, you can have multinucleated giant

<sup>9</sup> cells that aren't part of a granuloma.

You can see -- another common situation where you'll see granulomas is in Crohn's

12 disease. That's granulomatous inflammation in

the colon due to inflammatory bowel disease.

And I think -- yeah. So foreign body and infection are -- and certain diseases that may

<sup>16</sup> cause granulomatous -- that's sort of the

<sup>17</sup> hallmark of that type of disease, sarcoidosis.

Q. Have you ever -- the Figure 12.6 in Exhibit 8 actually doesn't have anything to do

with granulomatous endometritis, does it?

A. No. That figure is of a type of

<sup>22</sup> finding you can see in the endometrium that's not

<sup>23</sup> a granulomatous reaction.

Q. And how did Exhibit 8, if it does,

<sup>25</sup> inform your opinions in this case?

Page 59

<sup>1</sup> granulomous -- granulomatous inflammation, like

<sup>2</sup> here, and you can have acute inflammation, for

<sup>3</sup> example, in pleurodesis and chronic inflammation,

<sup>4</sup> like lymphocytes and plasma cells.

Q. Are you an expert in granulomatousinflammation?

A. Well, I certainly am familiar with the -- with diagnosis of granulomatous inflammation. I see it quite commonly.

Q. Under what circumstances do you commonly see granulomatous inflammation?

12 A. You see it often in -- the most common 13 situation would be foreign-body giant cell. That

<sup>14</sup> could be due to foreign bodies or it could be due

to -- a common situation we might see them is
 what's called an epidermal inclusion cyst in the

skin, and you actually can get a granulomatous

18 response to keratin that has -- if it's ruptured

and gone into the dermis, you can see that.
 Infections is another one. In tuberculosis,

you can see granulomatous inflammation. Fungal

<sup>22</sup> infections, you can see granulomatous

<sup>23</sup> inflammation.

Q. How many different types of granulomatous reactions are there?

r age 37

21

A. Well, it was just a piece of

<sup>2</sup> information I found, again because I was curious

3 mostly about what Kurman's opinion might be on

<sup>4</sup> this litigation. So...

<sup>5</sup> Q. Does -- do you know what -- did this

6 come from a particular chapter in Blaustein's second edition?

A. This, I don't -- I have no more

<sup>9</sup> information on this particular one. Um --

Q. Do you know who authored the chapter?

MR. ROTMAN: Excuse me. I think she was in the middle of an answer.

Q. I didn't mean to cut you off. Please quality go ahead.

A. Again, I don't have any more information. I brought it because I saw it.

Q. Okay. So you don't know who authored the chapter that contains this information in

<sup>19</sup> Exhibit 8?

20

A. Not for this edition, I do not.

Q. And are you -- do you -- did you say earlier you weren't sure if Dr. Kurman edited

<sup>23</sup> this particular version of Blaustein's Pathology?

A. I don't believe he did. I know he edited the fourth and fifth, but I don't believe

Page 62 Page 64

- <sup>1</sup> he did the second.
- Q. Does the information in Exhibit 8
- <sup>3</sup> inform your decisions regarding talc and
- <sup>4</sup> causation with regard to ovarian cancer?
- <sup>5</sup> MR. ROTMAN: Objection.
- <sup>6</sup> A. It's another piece of evidence. It
- <sup>7</sup> mentions granulomatous inflammation due to talc
- 8 in the endometrium.
- <sup>9</sup> Q. And what does that have to do with <sup>10</sup> ovarian cancer?
- A. Well, one of the plausible biologic
- $^{12}\,$  mechanisms for talc causing ovarian cancer is
- <sup>13</sup> that it elicits a chronic inflammatory reaction.
- Q. And there are different types of
- <sup>15</sup> chronic inflammatory reactions, aren't there?
- A. Yes, there are.
- Q. Is a foreign-body reaction the same as
- 18 the type of inflammation seen, for instance, in
- <sup>19</sup> ulcerative colitis? If you know.
- A. No, I'm just rereading the question.
- Ulcerative colitis, you don't typically see
- <sup>22</sup> foreign-body reaction.
- Q. Ulcerative colitis is one of the
- <sup>24</sup> conditions that has been associated with the
- <sup>25</sup> development of cancer; correct?

- 1 going to --
- MS. AHERN: One second, please.
- <sup>3</sup> Q. You can see inflammatory conditions
- <sup>4</sup> that are not in any way linked to the development
- <sup>5</sup> of cancer; correct?
- A. So not all chronic inflammation is
- <sup>7</sup> going to lead to cancer, but chronic inflammation
- 8 is a well-established cause of different types of
- <sup>9</sup> cancer.
- MR. ROTMAN: I'd like to take a break.
- 11 We've been going a little over an hour.
  - MS. AHERN: Okay.
- THE VIDEOGRAPHER: Here ends Media 1.
- 14 Off the record, 10:21 a.m.
  - (A recess was taken.)
- 16 THE VIDEOGRAPHER: Here begins Media
- <sup>17</sup> No. 2 in today's deposition of Sarah Kane, M.D.
- 18 Back on the record, 10:37 a.m.
- 19 BY MS. AHERN:
- Q. All right. Dr. Kane, we were -- we
- 21 left off, we were talking about chronic
- 22 inflammation and cancer.
- Do you remember that?
- 24 A. Yes.
- Q. Okay. Can you identify for me the

- A. Those with ulcerative colitis have an
- <sup>2</sup> increased risk of colon cancer, yes.
- Q. Do you know of any particular cancers
- <sup>4</sup> that have been linked to foreign-body responses?
  - A. Well, foreign-body responses -- for
- 6 example, asbestos is known to cause an
- <sup>7</sup> inflammatory response and asbestos is known to
- 8 cause mesothelioma and lung cancer, and the IARC
- <sup>9</sup> states that it causes ovarian cancer.
- Q. And how is the response to asbestos
- 11 different from the response that's been
- 12 documented with talc in terms of tissue reaction?
- A. So you can see a granulomatous reaction
- 14 to talc. You can see an acute reaction to talc
- <sup>15</sup> in pleurodesis patients.
- This page here mentions plasma cells and
- 17 lymphocytes, which you do see in Crohn's disease.
- Q. You see plasma cells and lymphocytes in
- <sup>19</sup> a number of different inflammatory conditions;
- 20 correct?
- MR. ROTMAN: You can answer.
- A. Yes, you can see lymphocytes and plasma
- <sup>23</sup> cells in inflammatory conditions.
- Q. And you can see inflammatory con---
- MR. ROTMAN: Object -- Object -- I was

- Page 65
- 1 types of ovarian cancer that have been associated
- <sup>2</sup> with chronic inflammation?
- A. So we know that endometriosis, as an
- <sup>4</sup> example, causes an inflammatory response. The
- <sup>5</sup> types of ovarian cancer that are associated with
- <sup>6</sup> endometriosis are clear cell carcinoma and
- endometrioid carcinoma.
- 8 Q. Are there other forms of ovarian cancer
- <sup>9</sup> that are associated in the literature with
- 10 chronic inflammation?
- 11 A. So we do see chronic inflammation
- 12 within other types of ovarian cancer, so
- high-grade invasive serous, low-grade serous
- carcinoma, you do see chronic inflammation within
- those tumors.
- Q. Let me be more precise, because it's
- sort of a chicken and the egg kind of thing.
- 18 I'm asking what sort of inflammatory
- 19 conditions have been associated with the
- <sup>20</sup> development or the cause of ovarian cancers?
- A. Yeah. So the mechanisms of a lot of
- ovarian cancer have been somewhat elusive.
- Unfortunately, it's a rare disease. It's hard to
- study. It's difficult to have sort of a large
- enough cohort to really get good data on ovarian

9

cancer, and so we don't really know all of the
 mechanisms of the initiation of ovarian cancer.

But we know that chronic inflammation, we
see it in ovarian tumors. We know that -- and
putting it in a talc perspective, we know that
talc can cause chronic inflammation and so -- and
we know that chronic inflammation causes other

types of cancer.
 Q. So is that -- can you name any other
 types of ovarian cancers that have been
 associated in the literature with chronic
 inflammation in terms of a specific etiology for
 that cancer?

A. So, again, I would say I don't know if
we can say for certain what the specific etiology
is for all types of surface epithelial cancer,
but we do know that, again, clear cell has been
associated with endometriosis, which causes
chronic inflammation, and we see chronic
inflammation in tumors. But the mechanisms for
these types of tumors have not been completely
mechan--- elucidated.

Q. So do you not know of any other specific ovarian tumors that have been associated in the literature causally with chronic <sup>1</sup> inflammation, yes.

Q. And you would agree that many, if not most, cancers are somewhat proinflammatory.

A. I think tumors can be -- can be proinflammatory, yes.

Q. So the tumor itself can invoke an
 inflammatory response during its development;
 correct?

A. Some tumors will.

Q. And often the tumors will hijack portions of the immune system to help them to grow and metastasize; correct?

A. I'm not sure exactly what you mean by "hijack," but there are mechanisms to -- or literature to suggest that.

Q. So just looking at a high-grade serous carcinoma and seeing inflammation doesn't tell you anything about whether that inflammation caused the tumor or whether it was caused by the tumor; is that correct?

A. So, again, the mechanisms are not that clear, so we don't know for sure. But is all chronic inflammation seen in a tumor the cause of the tumor? I don't know if we know the answer, but, you know, it's definitely an associated

Page 67

Page o

<sup>1</sup> inflammation?

A. Again, I don't believe that the
 mechanisms of all of these tumors have been
 elucidated completely.

Q. And I do understand your answer, but I just want to know if there are -- if you're aware followed inflammation with other types of ovarian cancer other than the two that you've mentioned, endometrioid and clear cell carcinoma.

A. Well, again, I mentioned that in serous tumors, we do see chronic inflammation in those tumors.

And with smoking and mucinous ovarian
cancers, you know, it's been -- there's some
literature that suggests, you know, smoking is
associated with mucinous and those -- that can
cause inflammatory reactions.

But, again, this is all -- it's not entirely clear what the etiology of some of these tumors are.

Q. You mentioned that in high-grade serous carcinoma, you see associated inflammation; correct?

A. You can see associated chronic

Page 69

Page 68

<sup>1</sup> pattern that we see with ovarian tumors.

Q. So my question is a little different,
if I can go back and find it. And it's missing.

My question is: As a pathologist looking at
 slides from a particular patient who has ovarian
 cancer --

A. Mm-hmm.

Q. -- just the observation that there is inflammatory cells associated with that tumor doesn't tell you anything, as a pathologist, in terms of whether that inflammation caused the tumor or if the tumor caused the inflammation.

A. Well, I think it depends on the situation. You know, again, for ovarian tumors, if we have a clear cell carcinoma, we could, you know, deduce, especially if you see associated endometriosis, that that is the likely cause, and, again, depending on the patient and the patient's risk factors.

But, yeah, if you're looking just at one slide without any other information, it would be difficult to say.

Q. Well, you would never just be looking at an one slide, would you? You'd be looking at all of the slides that were available for a

<sup>1</sup> particular patient, which would include

- <sup>2</sup> diagnostic tissue or tumor tissue, as well as
- <sup>3</sup> normal, nontumor tissue; correct?
- A. Right.
- <sup>5</sup> Q. Okay. So you would never be in a
- <sup>6</sup> situation where you're just looking at a single
- slide and making a determination, unless it's
- 8 maybe cytology or a biopsy; correct?
  - A. I'm sorry. I'm just looking at the --
  - Q. Sure.

9

10

21

- A. I'm not sure what the -- the first
- <sup>12</sup> question came out kind of funny.
- Q. What I was saying is there would never
- be a situation where you're only looking at a
- <sup>15</sup> single slide to make a diagnostic determination
- <sup>16</sup> unless it was from a biopsy sample or a cytology.
- A. That's what I was going to kind of
- 18 rewind and clarify, that sometimes there is only
- 19 one slide. So --
- Q. Is that an accurate statement?
  - MR. ROTMAN: Let her finish the answer.
- <sup>22</sup> I think she was saying "so" and then you asked
- <sup>23</sup> another question.
  - A. So in a larger specimen type, it's
- <sup>25</sup> correct you would be looking, usually, at more

- MS. AHERN: I'm not finished with my
- <sup>2</sup> question. You can object when I'm done with my
- <sup>3</sup> question.
- MR. ROTMAN: I object to you asking a question --
- 6 MR. KLATT: She didn't have --
  - MR. ROTMAN: -- when she's asking --
- 8 MS. AHERN: I can ask a question
- <sup>9</sup> whenever I want. She doesn't have to answer the
- 10 question if you instruct her not to, but while
- 11 she's spending time looking through her report,
- 12 I'm going to ask her a different question based
- on her recollection.
- MR. ROTMAN: Well, you've asked her a
- <sup>15</sup> question, she's in the process of answering it,
- <sup>16</sup> and you're asking -- you're asking her a second
- <sup>17</sup> question. That's what I'm objecting to.
- 18 BY MS. AHERN:
- 19 O. Doctor --
- MR. ROTMAN: Let her finish --
- Q. -- can you answer the question without
- 22 looking at your report?
- A. Well, I'd like to refer to my report if
  - <sup>4</sup> you're asking questions.
- <sup>5</sup> Q. And that's fine. My only question,

## Page 71

- <sup>1</sup> slide if there's more tissue that would fit in
- <sup>2</sup> one cassette to make one slide.
- <sup>3</sup> Q. Let's talk about high-grade serous
- <sup>4</sup> carcinoma.
  - High-grade serous carcinoma is the most
- <sup>6</sup> common form of ovarian cancer; correct?
  - A. It's most -- yes.
- 8 Q. By far the most common form of ovarian
- <sup>9</sup> cancer; is that also correct?
- A. It's the most common form, yes.
- Q. So let's talk about high-grade serous
- <sup>12</sup> carcinoma in the context of chronic inflammation.
- Do you know of any published literature that
- <sup>14</sup> connects chronic inflammation causally with the
- <sup>15</sup> development of high-grade serous carcinoma?
- A. I can -- in my report, I actually do
- <sup>17</sup> have a section. Let me find it.
  - 8 MR. ROTMAN: It might be easier to take
- 19 off the clip, if that helps you flip the pages,
- <sup>20</sup> because it's two-sided.
- Q. Doctor, while you look for that, just
- 22 to the best of your recollection, do you remember
- reading any studies that concluded that --
- MR. ROTMAN: I object. She's in the
- <sup>25</sup> middle of answering --

- 1 really, was, just based on your recollection as
- <sup>2</sup> we sit here discussing chronic inflammation and

- <sup>3</sup> ovarian cancer, if you are aware of studies that
- 4 causally associate chronic inflammation with
- <sup>5</sup> high-grade serous carcinoma?
- 6 A. So there's definitely literature that
- 7 has looked at associations between chronic
- 8 inflammation and the resulting sort of
- 9 expressions.
- And that's what -- I was trying to point you
- 11 to my report on Page 12, the end of it, where it
- 12 says, "There also is evidence that talc induces
- 13 macrophage TNF alpha expression and macrophages
- that express TNF alpha promote ovarian tumor
- genesis. TNF alpha is involved in chronic
- 16 inflammation and induces mutations in vitro and
- 17 TNF alpha-induced chromosomal mutations occur
- 18 mostly in cells with P53 aberrations and, of
- 19 note, high-grade serous carcinomas typically have
- 20 inactivating mutations in P53."
- So, again, we don't know all the mechanisms
- of all of these tumors, but there's certainly
- 23 literature that is investigating those types of
- 24 associations.
- MR. KLATT: Object. Nonresponsive.

Page 74 MS. AHERN: Same.

- Q. But since you brought it up, on Page 12
- $^{3}$  of your report, can you translate for me that
- <sup>4</sup> paragraph that you just read and put it in lay
- 5 terms and explain how that has anything to do
- 6 with causal associations with ovarian cancer and
- 7 chronic inflammation caused by tale?
- MR. ROTMAN: Objection.
- 9 A. Well, I think it's there in the report.
- 10 If talc is inducing macrophage TNF alpha
- 11 expression and macrophages that express TNF alpha
- 12 can promote ovarian tumor genesis that occur
- 13 mostly in the -- TNF alpha-induced chromosomal
- 14 mutations occur mostly in cells with P53
- <sup>15</sup> aberrations, I think that's relevant in looking
- <sup>16</sup> at evidence that -- for a plausible mechanism
- <sup>17</sup> that inflammation caused by talc can cause
- 18 aberrations in -- can cause P53 aberrations. And
- 19 we know that high-grade serous carcinomas, many
- 20 of them have P53 mutations.
- Q. And high-grade serous carcinomas with
- 22 P53 mutations, what causes the P53 mutations?
- A. Well, again, the literature is still
- 24 evolving into all of the mechanisms regarding
- 25 this. Some of them we know are sort of aberrant

<sup>1</sup> genomic event in the development of high-grade

Page 76

Page 77

- <sup>2</sup> serous carcinoma?
- <sup>3</sup> A. So, again, I don't know if I -- I don't
- 4 know if we always know what the earliest
- <sup>5</sup> identifiable genomic event in the development of
- <sup>6</sup> high-grade serous carcinoma is.
- Q. Have you reviewed the literature on
- 8 high-grade serous carcinoma from a molecular
- <sup>9</sup> genetics perspective?
- A. Yes, I reviewed papers on molecular genetics, yes.
- Q. Do those papers indicate that one of
- 13 the earliest, if not the earliest, genomic event
- 14 in the development of high-grade serous carcinoma
- 5 that has been identified are mutations in P53?
- A. So, again, you can see P53 mutations,
- <sup>17</sup> for example, in the fallopian tubes and you can
- have sort of serous tubal intraepithelial
- <sup>19</sup> carcinomas in the fallopian tube, which are
- thought to be early precursors for high-gradecarcinoma.
- Q. High-grade serous carcinoma?
- A. Mm-hmm. Sorry, high-grade serous
- 24 carcinoma.
  - Q. And do you agree that the STIC lesions

Page 75

- <sup>1</sup> mutations, and we don't always know why they
- <sup>2</sup> occur.

1

- We know that women with BRCA1 and BRCA2
- 4 mutations have -- can get high-grade -- have a
- <sup>5</sup> higher risk of high-grade serous carcinoma.
- 6 But, again, I don't think we know all of the
- <sup>7</sup> mechanisms that cause, you know, all of these
- 8 tumors.
- 9 MS. AHERN: Objection. Nonresponsive.
- Q. Doctor, do you know, as we sit here
- today, what causes P53 mutations in high-grade
- 12 serous carcinoma?
- A. I think I answered that. We know, I
- 14 mean, what's in my report and women with BRCA1
- <sup>15</sup> and BRCA2 mutations. But, again, the literature
- 16 is evolving with this.
- Q. Doctor, are you suggesting that BRCA1
- <sup>18</sup> and -2 mutations cause P53 mutations in
- 19 high-grade serous carcinomas?
- A. What I'm saying is that we know that
- 21 BRCA1 and BRCA2 mutation patients have a high
- <sup>22</sup> risk of ovarian cancer.

- And so you're asking me what causes, so, you
- <sup>24</sup> know, I'm telling you the data that we have.
  - Q. What is the earliest identifiable

- <sup>1</sup> or serous tubal epithelial carcinomas in the
- <sup>2</sup> fallopian tubes are currently known to be the
- <sup>3</sup> earliest manifestation of high-grade serous
- 4 carcinoma?
- A. Well, it depends on what you mean by
- 6 "manifestation." I mean, it takes a period of
- <sup>7</sup> time from initial insult until we can recognize
- 8 something histologically as a precursor to
- <sup>9</sup> cancer.
- Q. That was -- you're right, that was a
- <sup>11</sup> bad question.
- Do you recognize serous tubal
- 13 intraepithelial carcinomas as an in situ serous
- 4 carcinoma?
- A. I think evidence is supportive of
- <sup>16</sup> serous tubal intraepithelial carcinomas being a
- <sup>17</sup> precursor to some high-grade serous carcinomas.
- Q. And when you say "precursor," do you
- <sup>9</sup> mean a frank cancer or a premalignant lesion?
- What do you mean by "precursor"?
- A. Well, again, not -- we don't know if
- <sup>22</sup> all STICs are going to become high-grade serous
- carcinomas. STICs were originally discovered in
- <sup>24</sup> looking at fallopian tubes of BRCA1 and BRCA2
- patients that had -- what's the word I'm looking

- <sup>1</sup> for? -- prophylactic salpingectomies to decrease <sup>2</sup> their risk of ovarian cancer.
- And that was -- you know, they had evaluated
- 4 these precursor lesions, and so the thought is
- <sup>5</sup> that when you have these atypical cells in the
- 6 fallopian tube fimbria that are -- that have P53
- aberrations, that that -- the belief is that
- 8 that's a precursor to some of the serous invasive
- carcinomas that we see.
- 10 Q. Do you consider STIC lesions to be 11 carcinomas?
- 12 A. They're -- the name is intraepithelial 13 carcinoma, so its analogous term would be sort of <sup>14</sup> an in situ cancer.
- 15 Q. It is a cancer; correct?
- 16 A. Well, they're calling them
- <sup>17</sup> intraepithelial carcinomas because they have -- I
- mean, it's sort of semantics. They have a P53
- mutation and they're recognizable histologically.
- 20 Q. Do you agree that they're carcinomas or 21 cancer?
- 22 A. I certainly agree that they can be
- <sup>23</sup> precursors to invasive serous carcinomas. It's
- 24 sort of semantics, precursor -- it -- it's --
- 25 it's sort of the same question as ductal

- Page 80
- <sup>1</sup> that ovulation event, you might end up with <sup>2</sup> precursors.
- We don't really have a model in a lot of
- <sup>4</sup> ovarian cancers where you can follow a precursor
- <sup>5</sup> all the way through to -- what we think is a
- <sup>6</sup> precursor all the way through to the final tumor.
- <sup>7</sup> We just -- we don't really have a lot of data on
- those in-between steps.
- So it was very, very interesting when they
- discovered these STIC lesions in the fallopian
- tube fimbria that had P53 mutations. It was
- pretty compelling that these might be the
- precursor lesions to serous -- high-grade serous
- carcinomas.
- 15 Now, are all high-grade serous carcinomas
- <sup>16</sup> caused by STIC lesions or are they all -- is a
- 17 STIC lesion a precursor to all serous --
- 18 high-grade serous carcinomas? I don't think we
- 19 know that.
- Q. Do you know of any data associating
- <sup>21</sup> high -- excuse me, associating chronic
- inflammation or injury with the development of
- STIC lesions?
- A. So, again, I think the literature is
- still evolving with this -- these STIC lesions.

- <sup>1</sup> carcinoma in situ in the breast. There's
- <sup>2</sup> literature that debate about is ductal carcinoma
- <sup>3</sup> in situ a true cancer or is it a risk factor for
- <sup>4</sup> cancer, and what is the meaning of treatment for
- <sup>5</sup> DCIS in the breast? And I would say that that's
- <sup>6</sup> sort of analogous to STIC lesions in the
- <sup>7</sup> fallopian tube.
- Q. Okay. Do you agree that most
- <sup>9</sup> high-grade serous carcinomas arise from the
- <sup>10</sup> endometrial cells in the fallopian tube?
- 11 A. High-grade --
- Q. Epithelial cells in the fallopian tube. 12
- <sup>13</sup> Excuse me.
- A. So, again, we -- this was something
- 15 that the medical community really struggled with,
- 16 trying to find the precursor lesions to a lot of
- <sup>17</sup> these tumors.
- 18 And for a lot of years it was thought that
- 19 maybe serous carcinomas derived from what are
- <sup>20</sup> called epithelial inclusion cysts, so, basically,
- 21 the thought was that during ovulation, you're
- <sup>22</sup> disrupting the surface epithelium of the ovary
- <sup>23</sup> and when the ovary sort of heals itself, you get
- 24 this invaginated epithelium within the ovary and
- 25 that maybe because of inflammatory response to

Q. Sorry. Were you finished? I don't

- <sup>2</sup> want to interrupt you if you're thinking.
  - A. No, I'm thinking.
- Again, I don't think we really have the data
- on where these STIC lesions are coming from.
- Q. As part of your literature review for
- your MDL report, did you search specifically for
- papers that might be linking or associating
- chronic inflammation with early precursor lesions
- to serous invasive carcinomas or high-grade
- 11 serous carcinomas?
- 12 A. I was certainly looking for literature
- with the association of inflammation with ovarian cancer.
- 15 Q. With -- did you look specifically at <sup>16</sup> the various subtypes of ovarian cancer?
- 17 A. Yes.
- 18 Q. Is there a particular subtype of
- ovarian cancer that you think is associated with 20 talc use?
- A. So most of the epidemiology literature
- show the highest association with high-grade 23
- serous invasive carcinoma.
- 24 Q. When you say "highest association," are
- <sup>25</sup> you talking about strength of association?

- 1 A. I'm talking about the -- for example,
- <sup>2</sup> on the cohort studies, they found an association
- <sup>3</sup> with high-grade serous carcinoma.
- 4 And in a lot of the case-control studies,
- <sup>5</sup> when they looked at tumor subtype, a lot of those
- 6 tumors were serous carcinomas. Now, some of them
- <sup>7</sup> broke them out by relative risk by subtype; some
- 8 of them didn't. I'd have to look at the papers.
  - Q. Do you remember which cohort study
- 10 found an association with high-grade serous
- 11 carcinoma?
- A. I believe the Nurses' Health Study.
- 13 I'd have to look at it to see the numbers.
- Q. Was there more than one cohort study
- 15 that you recall associated talc use with
- <sup>16</sup> high-grade serous carcinoma?
- A. I'd have to look at them just to be
- 18 sure, but the one that I remember is the Nurses'
- 19 Health Study.
- Q. Are there any other subtypes,
- 21 histologic types, of ovarian cancer that you
- 22 believe are associated with talc use?
- A. Well. I think talc use -- I think talc
- 24 use could be associated with the -- any type of
- <sup>25</sup> surface epithelial cancer. That seems to bear

  - Page 83
- <sup>1</sup> out in the epi data. They've certainly seen an
- <sup>2</sup> association with different types of surface
- <sup>3</sup> epithelial cancers in the epi data, the strongest
- <sup>4</sup> association being with the serous invasive.
- Q. Have you seen any data supporting an
   association with talc use and a low-grade serous
- <sup>7</sup> carcinoma?
- 8 A. I'd have -- again, I'd have to look at
- <sup>9</sup> the different studies to break it out, but I know
- there was a study that found an increased risk
- there was a study that round an increased risk
- $^{11}$  with serous borderline carcinomas. I'd have to
- 12 look through the individual data sets.
  - Q. And serous borderline -- are -- serous
- <sup>14</sup> borderline tumors are not carcinomas; correct?
- <sup>15</sup> A. Sorry. I -- serous borderline tumors,
- <sup>16</sup> yes. I misspoke.
- Q. And you don't remember what study that
- <sup>18</sup> was that associated talc use with serous
- <sup>19</sup> borderline tumors?
- A. I would have to look at the data -- or
- <sup>21</sup> the study.
- Q. So do your opinions in this case apply
- <sup>23</sup> equally to all histologic subtypes of ovarian
- <sup>24</sup> cancer or are there specific subtype or subtypes
- 25 that you are opining are caused by talc?

- Page 84
- A. So I think the most consistent finding
- <sup>2</sup> is with high-grade serous carcinoma, but there's
- <sup>3</sup> data for the other types of surface epithelial
- <sup>4</sup> carcinomas.
- <sup>5</sup> Q. And what are the surface types of
- 6 carcinomas?
- A. So they're endometrioid and clear cell,
- <sup>8</sup> and mucinous less so than, I believe, the
- <sup>9</sup> endometrioid and clear cell, although I believe,
- again, in the 2010 Nurses' Health -- is that --
- <sup>11</sup> I'd have to go back -- I -- there was a mention
- of mucinous -- I'm not absolutely sure it was the
- 13 Gates 2010, but there was a mention of an
- 14 increased risk of mucinous in one of those
- increased risk of mucinous in one of those
- 15 studies.
- Q. Do you agree that the different
- <sup>17</sup> histologic subtypes of epithelial ovarian cancer
- <sup>8</sup> are likely to have different genetic causes?
- A. I know they're associated with
- <sup>20</sup> different genetic mutations.
- Q. Do they develop along distinct
- <sup>22</sup> molecular genetic pathways?
- A. That's what the literature suggests at
- this point.
  - Q. Do they behave differently?

Page 85

- A. So the high-grade surface epithelial
- <sup>2</sup> carcinomas have a more aggressive pathway or
- <sup>3</sup> presentation. The low-grade surface endothelial
- 4 carcinomas tend to have a more indolent
- progression.

13

- Q. You've used the term "surface
- <sup>7</sup> epithelial carcinomas" and I haven't seen that
- 8 term generally used in the literature.
- 9 When you talk about surface epithelial
- carcinomas, are you talking about serous or are
- 11 you talking about endometrioid or are you talking
- 12 about clear cell? Mucinous?
  - A. Epithelial carcinomas.
- 4 Q. That would encompass all of those,
- wouldn't it? Wouldn't surface epithelial
- <sup>16</sup> carcinomas encompass mucinous, clear cell,
- endometrioid, and serous subtypes? They're all
- 18 epithelial ovarian cancers; correct?
- A. Yes. That's what I'm referring to when
- <sup>20</sup> I -- because we also have germ cell tumors and
- stromal tumors of the ovary. Those are much more
- <sup>22</sup> rare, and I'm not -- you know, I don't think
- 23 there's associations with those. So, yes, we're
- <sup>24</sup> talking about epithelial carcinomas, to be clear.
  - Q. Well, and just -- because I want to

<sup>1</sup> make sure your testimony is also clear.

- So if we could, if you could use the
- <sup>3</sup> specific subtype names, like serous or
- 4 endometriod --
- <sup>5</sup> A. Okay.
- 6 Q. -- or clear cell. That way there's no
- <sup>7</sup> confusion later on about what you intended.
- 8 So when you say -- let's see. Let me go
- <sup>9</sup> down. Sorry.
- When you say "high-grade surface epithelial"
- <sup>11</sup> carcinomas," are you talking about high-grade
- 12 serous carcinomas?
- MR. ROTMAN: Objection. You're asking
- <sup>14</sup> her to reflect back on all of her prior answers
- 15 to all of your prior questions, whether she was
- <sup>16</sup> referring to the same thing in each one?
- Q. Do you understand my question?
- A. I'd have to figure out what answer
- 19 you're talking about, but --
- Q. So you just -- just a few questions
- <sup>21</sup> ago, you answered -- I said, "Do the different
- 22 types -- histologic types develop along the same
- <sup>23</sup> molecular genetic pathways?"
- You said, "That's what the literature
- <sup>25</sup> suggests at this point."

- Does that make sense?
- <sup>2</sup> A. Okay. Yes. Okay.
- Q. Okay. All right. So let me ask my

Page 88

Page 89

- <sup>4</sup> question that I asked a little while again, and
- <sup>5</sup> you tell me -- you can answer it again with the
- <sup>6</sup> terminology.
- 7 Do the different histologic subtypes of
- <sup>8</sup> ovarian cancer behave differently?
  - A. Yes. Again, the high-grade ones
- generally behave differently than the low-gradeones.
- Q. Okay. Do endometrioid and clear cell carcinomas behave differently from high-grade
- <sup>14</sup> serous carcinomas?
- A. The high-grade serous carcinomas tend to behave more aggressively.
- Q. Do low-grade serous carcinomas behave
- <sup>18</sup> differently from endometrioid, clear cell, and
- 19 high-grade serous carcinomas?
- A. They tend to be less aggressive. They
- <sup>21</sup> all tend to be less aggressive than the
- <sup>22</sup> high-grade serous carcinomas or other high-grade
- <sup>23</sup> carcinomas of the ovary.
  - Q. And are they thought to each have
- <sup>25</sup> different cells of origin?

Page 87

- I asked, "Do they behave differently?"
- 2 And then you responded, "So the high-grade
- <sup>3</sup> surface epithelial carcinomas have a more
- <sup>4</sup> aggressive pathway or presentation. The
- <sup>5</sup> low-grade surface epithelial carcinomas tend to
- 6 have a more indolent..."
- Were you talking about high-grade serous and
- 8 low-grade serous carcinomas?
- 9 A. I was talking -- sorry. I was talking
- 10 about high-grade serous carcinomas, yeah. And we
- <sup>11</sup> also have sort of undifferentiated carcinomas
- <sup>12</sup> that are also considered high grade.
- Q. Okay. And were you talking about
- 14 low-grade serous carcinomas when you said
- 15 "low-grade surface"?
  - A. No. So "surface" doesn't really refer
- 17 to cell type; it's just sort of a --
- 18 Q. Right.
- 19 A. -- an umbrella term for the epithelial
- 20 carcinoma.

- Q. Right, which is my point. I just
- 22 wanted to be clear. When you say "surface" --
- 23 A. Yes.
- Q. -- could you instead use the actual
- 25 cell type.

- A. Again, we're not entirely sure where
- <sup>2</sup> these tumors are arising from, particularly with
- <sup>3</sup> mucinous carcinomas. I think mucinous carcinomas
- <sup>4</sup> and there's also a type transitional cell, which
- <sup>5</sup> is very, very rare, and most of the literature,
- 6 when it comes to the epi data, don't really
- 7 discuss transitional cell.
- 8 But putting that aside, mucinous carcinomas
- 9 we have, I think, the least amount of data on
- where they are actually arising from. Clear cell
- 11 and endometrial carcinomas have an association
- 12 with endometriosis, but, again, you know, are all
- 13 cases of endometriod and clear cell carcinomas,
- 14 are they all arising from endometriosis? I don't
- 15 think I can say that. I don't think we know for
- 16 sure.
- And serous carcinomas, we talked about the precursor lesions and the fallopian tubes.
- So there are differences where we think the
- tumors are arising from, but, again, I don't
   think we have absolutes where we can definitively
- 22 say, you know, this particular tumor in this
- 23 particular woman arised [sic] from this precursor
- particular woman arised [sic] from this precurs or...
- Q. Okay. And do you know if the different

- histologic subtypes have been associated in the
   epidemiologic literature with different risk
- <sup>3</sup> factors?
- 4 A. Yes. Again, I think we touched on some
- <sup>5</sup> of that before. There is an association with
- <sup>6</sup> endometrioid and clear cell with endometriosis
- <sup>7</sup> and obesity.
- 8 Mucinous carcinomas have shown to be
- <sup>9</sup> associated in some studies with a smoking
- 10 history.
- High-grade serous carcinomas, it's a little
- 12 bit harder. We know that BRCA1 and BRCA2
- <sup>13</sup> patients have an increased risk.
- Q. Now that we're on that topic of
- genetics, do you know what proportion --
- <sup>16</sup> currently, what is believed to be the proportion
- of ovarian cancers that are caused by germlinemutations?
- <sup>19</sup> A. Off the top of my head, I think -- do I
- 20 have that in my report? But I -- I'm thinking
- $^{21}\,$  it's 10 to 20 percent, but that's off the top of
- 22 my head.
- Q. Have you seen any research coming out
- <sup>24</sup> of Seattle Cancer Care Alliance over the last 10
- <sup>25</sup> or 15 years that indicates the number could be as

- Q. -- this is an article by Karen
- <sup>2</sup> Malmberg, et al., entitled "Serous tubal
- <sup>3</sup> intraepithelial carcinoma, chronic fallopian tube
- <sup>4</sup> injury, and serous carcinoma development," and it

Page 92

Page 93

- <sup>5</sup> was in Virchows Archives, March of 2016.
- MR. TISI: What did you mark this? I'm sorry.
- 8 MS. AHERN: I marked this one 9. Thank
- <sup>9</sup> you. No -- yes, 9.

10

- MR. TISI: Oh, I'm sorry.
- MS. AHERN: That's okay.
- Q. Do you recall if you've ever reviewed this article?
- A. It's possible. It's certainly possible
- 15 that I have seen this before in just my daily
- <sup>16</sup> practice. I don't believe I cited it in any of
- $^{\rm 17}~$  the references that I can remember, but it's
- <sup>8</sup> highly possible that I've seen it.
- Q. Do you see the first page that -- you can just skip if you want, take your time reading
- 21 it if you'd like, but the authors conclude in
- 22 their study that there is no correlation with
- <sup>23</sup> chronic tubal injury or inflammation with the
- <sup>24</sup> development of STIC lesions or the existence of
- 25 STIC lesions.

Page 91

- <sup>1</sup> high as a quarter of all ovarian cancers being
- <sup>2</sup> linked to germline mutations?
- A. That would roughly fit with what I just
- 4 said, 10 to 20 percent. I can't say for sure
- <sup>5</sup> that I have seen that. I might have. But it
- <sup>6</sup> fits with what I remember.
  - Q. I had asked you earlier if you had
- 8 reviewed any literature relating to inflammatory
- <sup>9</sup> conditions and associations with early STIC
- 10 lesions.
- And you -- and, I'm sorry, I don't want to
- 12 misstate your response. What was your response
- 13 to that?

16

- A. Had I reviewed literature? Yes, I've
- <sup>15</sup> seen literature.
  - Q. Okay.
- 17 (Article entitled "Serous tubal
- intraepithelial carcinoma, chronic
- <sup>19</sup> fallopian tube injury, and serous carcinoma
- development" marked Exhibit 9.)
- 21 BY MS. AHERN:
- Q. I'm handing you what's been marked as
- <sup>23</sup> Exhibit 9 to your deposition. And this is --
- MS. AHERN: I don't know if anyone else
- <sup>25</sup> wants one.

- Do you see that?
- A. No. Can you -- I'm sorry, can you
- <sup>3</sup> point to me --
- O. Oh, sure.
- <sup>5</sup> A. -- where?
- 6 Q. Do you see the abstract, if you carry
- <sup>7</sup> it over to the second column?
  - A. Mm-hmm. Yes.
- <sup>9</sup> Q. It says, "STIC and invasive cancer were
- seen more often in the older patients than in the
- 1 younger patients"?
  - A. Mm-hmm.
- <sup>3</sup> Q. This study is -- small study, no
- correlation with chronic tubal injury or
- <sup>15</sup> inflammation was identified.
- A. Yes, with the caveat -- that was a
- <sup>17</sup> conclusion with the caveat that it was a small
- 18 study

- Q. Have you -- as a gynecologic
- <sup>20</sup> pathologist or a pathologist who has subspecialty
- <sup>21</sup> training in gynecologic malignancies, how often
- <sup>22</sup> do you see chronic -- or evidence of chronic
- <sup>23</sup> inflammation surrounding STIC lesions?
- Or strike that. How often do you see STIC
- 25 lesions?

A. On -- certainly, I can't give you a

- <sup>2</sup> number. I've certainly made the diagnosis and
- 3 see it -- I can't give you a number of how many
  4 times
- <sup>5</sup> Q. Have you ever been involved in a study
- 6 looking specifically at STIC lesions and
- <sup>7</sup> high-grade serous carcinomas?
- 8 A. I have not been involved in a study,
- <sup>9</sup> no.
- Q. Have you ever seen evidence of chronic inflammation with a STIC lesion?
- A. Off the top of my head, I am not sure.
- 13 It's possible, but I can't really answer that off 14 the top of my head.
- Q. How often do you see chronic
- <sup>16</sup> inflammation in the fallopian tubes associated
- with high-grade serous carcinoma?
- A. You can certainly see it, but it sort
- 19 of goes along with the discussion that we had
- <sup>20</sup> before. You can see chronic inflammation within
- 21 the tumor, as well.
- And so I think, you know, the literature
- 23 is -- the research is ongoing as to, you know...
- Q. So once the tumor -- once there's a lot
- <sup>25</sup> of tumor burden in the abdominal cavity, it's
  - Page 95
- <sup>1</sup> difficult to tell where the inflammation is
- <sup>2</sup> coming from or what started it; is that correct?
- <sup>3</sup> A. Well, if there's chronic inflammation
- 4 in the tumor, it's likely the tumor has something
- <sup>5</sup> to do with the chronic inflammation.
- <sup>6</sup> But, again, you know, as we talked about
- <sup>7</sup> before, I think sometimes it is difficult to
- <sup>8</sup> tell.
- 9 MS. AHERN: Okay. Housekeeping matters
- <sup>10</sup> before I forget.
- Let me go ahead somehow and mark --
- 12 let's mark -- we can remove this later --
- 13 "Blaustein's Pathology of the Female Genital
- 14 Tract," Fourth Edition, as Exhibit 10 to your
- <sup>15</sup> deposition.
- 16 ("Blaustein's Pathology of the
- Female Genital Tract," Fourth Edition,
- marked Exhibit 10.)
- 19 BY MS. AHERN:
- Q. And, Doctor, you brought this textbook
- 21 with you today.

25

- 22 Is this your textbook?
- A. That particular copy is not. That's my
- <sup>24</sup> coworker's copy. This copy is mine (indicating).
  - Q. Okay. And inside this, you have what

- 1 looks --
- <sup>2</sup> MR. ROTMAN: Just so the record is
- <sup>3</sup> clear, when you said "this," do you want to
- 4 identify it?
- A. Sorry. The fourth edition belongs to a

Page 96

- <sup>5</sup> colleague. The fifth edition is my own.
- MS. AHERN: Okay. We'll get to that
- <sup>8</sup> one. I'll mark that next.
- <sup>9</sup> Q. There is a photocopy here, "Blaustein's
- O Pathology of the Female Genital Tract, Fourth
- <sup>11</sup> Edition," Pages 300 and -- well, Page 376,
- <sup>12</sup> Page 539, Page 540, 648, 1216, 1217, 1218.
- Is this a copy -- are these copies that you
- 14 made?

19

- <sup>15</sup> A. Yes.
- <sup>16</sup> Q. Okay.
- MR. TISI: Do you have a stapler?
- <sup>18</sup> Otherwise I'll get one.
  - MS. AHERN: No, I don't have one.
- MR. TISI: No, I'll go get one.
- 21 BY MS. AHERN:
- Q. Can you tell me why you made those
- 23 copies?
- A. I made them because it was easier than
- <sup>25</sup> lugging around a whole textbook. That's why I

- <sup>1</sup> Xeroxed them. But --
- Q. You had to bring it anyway.
- <sup>3</sup> Sorry. Go ahead.
- 4 A. But the particular pages that I copied
- <sup>5</sup> are ones that talk about granulomatous reactions
- <sup>6</sup> to talc in the female reproductive system.
  - Oh, sorry. Okay.
- 8 MS. AHERN: Okay. We'll go ahead and
- <sup>9</sup> mark those copies as Exhibit 10 to your
- deposition.And
  - Q. And just to confirm --
- MS. AHERN: Sorry. Are we on 10 or 11?
  - We're on 11. Thank you.
- 14 Q. As a --
- MR. TISI: Is this the next one?
- MS. AHERN: Yeah. Hold on. I'm going
- <sup>17</sup> to clarify it.
- Q. So this photocopy that you made from
- Blaustein's came from the fourth edition?
- A. Correct.
- Q. The textbook that we have here marked as Exhibit 10.
- A. (Witness nodded.)
- Q. Okay. So Exhibit 11 are photocopies of
- <sup>25</sup> specific pages from Exhibit 10, which is

Page 98 <sup>1</sup> Blaustein's Pathology of the Female Genital

<sup>2</sup> Tract, Fourth Edition.

3 (Excerpt from "Blaustein's

4 Pathology of the Female Genital Tract,"

5 Fourth Edition, marked Exhibit 11.)

6 BY MS. AHERN:

10

11

Q. Okay. And can you tell me, with

8 Exhibit 11, the specific information that you

found relevant to your opinions in this case?

A. Okay. So on Page --

MR. ROTMAN: You marked the copy as

12 Exhibit 11 and the book as Exhibit 10?

13 MS. AHERN: Mm-hmm.

14 MR. ROTMAN: Okay.

15 A. Okay. You have to bear with me,

<sup>16</sup> because I don't have any highlights or anything,

so I have to find it.

18 So Page 376, right down -- okay. The last

paragraph under "Zanko Granulomatous

20 Inflammation," it says, "Rarely, talc or another

21 foreign substance may elicit a foreign-body

22 reaction in the endometrium. Talc may be

<sup>23</sup> introduced into the endometrial cavity by

24 instruments contaminated with talcum powder or by

gloves during a pelvic examination. Patients may

Page 99

<sup>1</sup> be asymptomatic or may have menorrhagia.

<sup>2</sup> Microscopically, the extent of the granulomatous

<sup>3</sup> inflammatory reaction depends on the quantity of

<sup>4</sup> talc inoculated. The infiltrate is characterized

<sup>5</sup> by histiocytes and foreign-body multinucleated

<sup>6</sup> giant cells surrounding the talc crystals, along

<sup>7</sup> with lymphocytes and plasma cells. The crystals

8 appear as refractile, birefringent, needle-like,

or fan-shaped splinters in polarizing light."

10

Then on Page 530 --

11 Q. Sorry. Let me just -- let's take this 12 in order.

So what about that particular passage

informs your causation opinions regarding talc

and ovarian cancer, if at all?

A. So it is evidence that talc causes

foreign-body giant cell reaction and chronic

inflammation in the endometrium.

19 O. And that is the uterine tissue;

correct?

16

25

21 A. That's the lining of the uterus,

22 correct.

Q. And how does that inform your opinions 23

24 regarding the development of ovarian cancer?

A. Well, I thought, again, it's a piece of

Page 100

<sup>1</sup> evidence, and it shows that talc can cause

<sup>2</sup> granulomatous or chronic inflammation in the

<sup>3</sup> female reproductive tract.

Q. And how is uterine cancer related to,

for instance, high-grade serous carcinoma of the

A. Again, this is just evidence that talc

can cause chronic inflammation and granulomas in

the endometrium, which I think is another piece

of evidence that talc can cause chronic

inflammation and granulomatous inflammation in

the female reproductive tract.

13 Q. Doctor, shouldn't talc -- based on the

literature that we have available to us over the

last 50 years, shouldn't talc induce that

response in any tissue that it's found in?

A. Well, again, different tissues will

respond in different ways, but I think it also

depends -- well, I'll just...

Q. Well, as a pathologist --

MR. ROTMAN: Wait. Wait. Are you

22 done?

20

21

25

23 MS. AHERN: Are you done?

THE WITNESS: I think so.

Q. Okay. So as an anatomic pathologist

Page 101

<sup>1</sup> who knows something about granulomatous

<sup>2</sup> reactions, shouldn't a foreign body produce a

<sup>3</sup> foreign-body reaction in any tissue that it's

4 found in?

A. Not -- no, not always. Sometimes you

6 will have a foreign body that won't cause a

<sup>7</sup> foreign-body giant cell reaction. It depends

8 on -- it depends on the particle, the foreign

body, the tissue it's in. You don't always see

10 that. And also the timing, when you're looking

at it, versus how long it's been there.

Q. Well, the timing is just more or less

when you observed it, not whether it occurred;

correct?

15

25

MR. ROTMAN: Objection.

16 A. So it's hard to know whether or not it

occurred -- if it had been there for a long time

and you're looking years, you know, in -- years

after it's been there, if you don't see a

granulomatous or chronic inflammation, that's not

evidence that it never occurred; it's just you're

not seeing it at that moment.

Q. Do you know of any -- any foreign 23

24 bodies that generate tissue-specific reactions?

A. Well, we -- I mean, we certainly have

- evidence with, say, viruses and bacteria that
- <sup>2</sup> respond differently -- certain tissues will
- <sup>3</sup> respond differently to different infections.
- For esophageal cancer, there's some
- <sup>5</sup> literature to suggest that very hot liquids
- <sup>6</sup> increase your risk of esophageal cancer. So,
- <sup>7</sup> yes, certain tissues will respond differently to
- <sup>8</sup> different material.
- 9 Q. So my question was -- it might be just
- <sup>10</sup> a little simpler to think of just this
- 11 question -- do you know of any foreign bodies --
- 12 I'm not talking about viruses and bacteria which
- 13 cause immune responses -- but foreign bodies that
- <sup>14</sup> generate a tissue-specific foreign-body reaction?
  - A. Well, it's sort of semantics. I mean,
- <sup>16</sup> viruses and bacteria -- that's why I answered the
- way I did -- are foreign to -- and, certainly,
- <sup>18</sup> foreign bodies can elicit immune response.
- 19 That's why you see granulomatous reactions and
- <sup>20</sup> chronic inflammation.
- So I guess I'm not -- I think I answered the
- <sup>22</sup> question.

15

- Q. Pathologists distinguish the different
- 24 types of granulomatous inflammation based on the
- <sup>25</sup> cause of the inflammation; correct?

- Page 104
- <sup>1</sup> granulomas, which are caused by talc and
- <sup>2</sup> cornstarch and certain other inert-type
- <sup>3</sup> materials; correct?
- MR. ROTMAN: Objection.
- A. Again, you can have inflammation --
- <sup>6</sup> granulomatous inflammation due to infection, you
- <sup>7</sup> can have granulomatous infection -- response due
- 8 to foreign bodies, and you can have granulomas in
- <sup>9</sup> certain diseases, like sarcoidosis or Crohn's
- o disease.
- So in that respect, yes, we're categorizing
- granulomas, but on a daily basis, other than that
- 13 type of breakdown, we're not subcategorizing
- <sup>14</sup> granulomas.
- Q. But you are aware of the literature
- <sup>16</sup> that actually characterizes the different types
- $^{17}\,$  of granulomas and the types of cells that are
- 18 involved in the formation of those granulomas;
- 19 correct?
- A. As far as foreign-body giant cells and
- multinucleated giant cells and inflammatory
- <sup>22</sup> versus foreign body, yes.
- Q. So, you know, a granuloma caused by
- 24 tuberculosis is going to be very different from a

Page 105

<sup>5</sup> granuloma caused by talc; correct?

- A. We look for -- if we see granulomatous
- <sup>2</sup> inflammation in tissue, we certainly look for a
- <sup>3</sup> potential cause. We want to rule out infection,
- <sup>4</sup> so if we see granulomas, we'll routinely do
- <sup>5</sup> special stains to rule out infection. Like we'll
- <sup>6</sup> do an acid-fast Bacillus stain for microbacteria.
- <sup>7</sup> We'll do fungal stains to rule out a fungal
- <sup>8</sup> infection that causes inflammation.
- 9 And then, of course, if we have -- if those
- <sup>10</sup> are negative and we're trying to figure out if
- 11 there's a foreign body within a granuloma, we can
- 12 use polarized light to try to find the foreign
- body to identify it as a foreign-body giant cell
- <sup>14</sup> reaction.
- But often you do have granulomatous
- <sup>16</sup> inflammation and you won't find fungi -- fungal
- <sup>17</sup> lesions -- fungal bodies or bacteria or
- <sup>18</sup> birefringent particles on them, so you don't
- 19 necessarily know why you have a granulomatous
- <sup>20</sup> inflammation.
- Q. Pathologists categorize granulomatous
- <sup>22</sup> inflammation, don't they? They categorize it in
- 23 terms of the different types of immune granulomas
- $^{\rm 24}~$  and the etiologic agents for those granulomas,
- <sup>25</sup> and over here somewhere are the foreign-body

- MR. ROTMAN: Objection.
- A. I would say not necessarily. In
- 3 microbacterial infections, you can have necrosis
- 4 within granulomas, but that doesn't mean that
- 5 you're not necessarily going to see necrosis in a
- 6 foreign-body granuloma.
- Q. How often have you seen necrosis
- 8 associated with a foreign-body granuloma?
- A. I'd say more commonly you see
- 0 necrotizing or necrotic granulomas in infectious
- 1 granulomas.
- Q. There are different types of
- 13 macrophages that are involved, too, in
- 14 foreign-body granulomas and in immune granulomas;
- 15 correct?
- A. As far as macrophages themselves and
- 17 multinucleated giant cells that can form
- 18 granulomas.
- Q. There are different types, different
- 20 subtypes of macrophages that are involved in --
- 21 A. Yes.
- Q. -- those activities; correct?
- 23 A. Yes.
- Q. Okay. So there are differences between
- <sup>25</sup> a foreign-body granuloma and an immune granuloma?

Page 106 A. There can be.

Q. Well, there are, aren't there? I mean,

<sup>3</sup> there are papers that characterize these. A. Yes, but I'm -- yes. In the

<sup>5</sup> literature, yes. And -- but are we necessarily

<sup>6</sup> categorizing them when we're looking at a

particular patient? We're looking for the cause

of the granuloma, but we're not necessarily

subcategorizing, is my point.

O. Understood.

1

10

11 Oh, I'm sorry. We were talking about the <sup>12</sup> pages that you copied from Blaustein's.

What was the second page in that photocopy, 14 Exhibit 11?

15 A. Okay. So Page 539.

16 O. What was it on 539 that's relevant to your opinions in this case?

A. Okay. I think it starts at the very bottom. I think it carries into Page 540, where

<sup>20</sup> it starts talking about foreign-body reactions in

<sup>21</sup> the -- this is diseases of the fallopian tube. 22

So it starts, "Foreign material may be

<sup>23</sup> introduced into the tube in the course of

gynecological investigation, especially

<sup>25</sup> hysterosalpingography, lubricant jelly, mineral

Page 107

- <sup>1</sup> oil, and starch and talc powder may cause lipoid
- <sup>2</sup> or granulomatous salpingitis. Talc may cause
- <sup>3</sup> mucosal or serosal granulomas. Examination of
- 4 all granulomas or foreign-body reactions under
- <sup>5</sup> polarized light is useful in the recognition of
- 6 these processes."
- So, again, I'm just referencing the fact
- that talc can cause granulomatous reaction in the
- 9 fallopian tube.
- 10 Q. So another tissue that's exposed to
- talc forms the typical type of foreign-body
- 12 response?

13

- A. That can form a granulomatous reaction.
- Q. Okay. And does that in any way inform
- <sup>15</sup> your opinions on causation, other than
- granulomatous reactions occur?
- 17 A. Well, so, again, it's another piece of <sup>18</sup> evidence that talc can cause a granulomatous
- reaction within the female reproductive tract.
- Now, the fallopian tube, we know some -- has
- 21 been indicated as a precursor site for certain
- <sup>22</sup> high-grade serous carcinomas, so I think it's
- relevant. 23
- 24 But, again, you know, we're talking about
- <sup>25</sup> mechanisms that talc may eventually cause ovarian

Page 108

- <sup>1</sup> cancer, which is sort of the plausibility arm of
- <sup>2</sup> the Bradford Hill. I think it's compelling
- <sup>3</sup> evidence that we see that you can get
- granulomatous inflammation and some of these
- sections have mentioned lymphocytes and plasma
- 6 cells in the tissue. I mean, I think it's a
- further piece of evidence that talc can cause
- these -- this type of inflammation in female
- reproductive market.
- Q. How often have you, in your career, seen a talc granuloma in gynecologic specimens?
- A. We don't routinely do -- perform
- polarized light microscopy on ovarian tumors,
- partly because you really need electron
- 15 microscopy. You can -- with polarized light
- microscopy, you can tell that there's a foreign
- substance there, but that's pretty much as far as
- you can -- you can get. You need more testing to
- be able to determine what type of particle it is,
- usually. So we don't, in daily practice,
- routinely use polarized light microscopy.
- 22 Now, it's entirely possible that, you know,
- in the course of my career, I've come across
- chronic inflammation or granulomas in an ovarian
- tumor that could have been due to talc that I

Page 109

- <sup>1</sup> didn't polarize so I didn't see particles, I
- <sup>2</sup> guess.
- Q. So let me back up and just ask you:
- 4 How often in your career have you seen
- <sup>5</sup> foreign-body granulomas? Regardless of whether
- <sup>6</sup> you've identified the particle in the granuloma,
- how often have you seen foreign-body granulomas
- in gynecologic specimens? Not just tumors, but
- any gynecologic specimens you've reviewed.
  - A. No, I understand.
- 11 O. Okay.

10

- 12 A. You can certainly see granulomas -- how
- often, I can't give you a number; that would just
- be wildly guessing -- but you can see granulomas
- in the endometrium. You can see them in
- different types of tumor.
- 17 Sometimes it's -- you'll see granulomas, but
- you won't see a particle, so you don't know for
- sure if it's a foreign-body granuloma; you just
- see the granuloma because you're not using
- polarized light microscopy on it.
  - MR. KLATT: Object. Nonresponsive.
- 23 MS. AHERN: Same.
- 24 Q. So how often, though, in your career --<sup>25</sup> you can give me an estimate -- have you seen

Page 110 1 foreign-body granulomas in gynecologic specimens? <sup>1</sup> foreign body, you're not necessarily going to be 2 MR. ROTMAN: Objection. <sup>2</sup> able to say whether or not it's a foreign-body Q. I'm not talking about immune granuloma with absolute certainty unless you're granulomas, but just foreign-body granulomas. 4 looking under polarized light microscopy. And even then, you might not see it under polarized We'll start there. MR. ROTMAN: Objection. You've asked 6 light microscopy, because it depends on the section of the tissue you're looking at and -that question. She's answered it. A. So, again, I've seen granulomas in my Q. Okay. Thank you. <sup>9</sup> career in the female reproductive tract, but I And if you see a foreign-body response in 10 don't -- pathologists don't routinely use tissue, do you then go one step further and polarized light microscopy in that instance to polarize to see if you can identify whether 12 look for foreign bodies. that's got a foreign body in it? 13 13 Q. Okay. So are you done? A. It certainly depends on the situation. 14 14 MR. ROTMAN: Can we take a break? So, for example, in cases where there's been 15 MS. AHERN: Not just yet. Let me a surgery and they've taken out more tissue after 16 finish this line of questioning and then we can surgery, you might be looking for polarizable foreign body. Often, you can see a suture on take a break. Because we may want to -- what time is it? light microscopy. But, yeah, we do -- depending 19 MR. ROTMAN: It's been an hour. on the situation, we will use polarized light 20 MS. AHERN: 11:30. If we go a little microscopy to find foreign bodies. bit longer, we can break for lunch if you want. 21 MR. ROTMAN: Okay. 22 MR. ROTMAN: I just want to take a 22 Q. How often do you polarize specimens <sup>23</sup> where you've found a foreign-body response? How break in the next few minutes.

> Page 111 Page 113

A. I think -- I think I tried to come up

Page 112

## <sup>1</sup> BY MS. AHERN:

24

25

Q. Doctor, are you able, as a -- as a <sup>3</sup> pathologist, under regular light microscopy to 4 identify a foreign-body granuloma? Not the content, just the foreign-body granuloma.

MS. AHERN: Sure.

A. I would say it depends on the specific granuloma. Sometimes, for example, in epidermal inclusion cysts, you can see the keratin under

<sup>9</sup> light microscopy that's causing the reaction, but 10 you don't always -- you won't always necessarily

11 see a particle. They're very small. And unless 12 you're looking specifically for polarizable

<sup>13</sup> birefringent particles, you're not going to see

<sup>14</sup> it just with regular light microscopy.

Q. So my question wasn't -- and I thought <sup>16</sup> I was specific -- my question wasn't whether or not you could see the particle; my question was:

18 You should be able to see the foreign-body

19 response in terms of multinucleated giant cells. 20 Do you -- can you see that under regular

21 light microscopy?

A. Well, so you're categorizing it as a 22 <sup>23</sup> foreign-body granuloma. What I'm saying is you 24 can see granulomas, of course, under light

<sup>25</sup> microscopy. But if you're not looking for a

<sup>1</sup> with an estimate. I think I have it in my

<sup>2</sup> report, actually, in the beginning.

often do you do that?

Yes. So I estimated that I use polarized

<sup>4</sup> light microscopy for this purpose, which is identifying foreign material to explain an

<sup>6</sup> inflammatory reaction, I estimated about twice a month. It's an estimate.

And I -- well, that was -- actually, I was

referring to calcium oxalate crystals in breast

biopsies. That's different. So it's not

uncommon, let's put it that way, but I can't really give you a -- an estimate.

13 Q. What was the estimate for breast tissue?

15 A. I think it was twice a month, is what I 16 said.

17 O. So compared to looking for calcium crystals in breast tissue twice a month, how often in gynecologic specimens do you look for foreign bodies?

21 A. I would say slightly less than that.

22

23

Q. Maybe once a month, maybe less than that?

24 A. Once a month is probably a good <sup>25</sup> estimate, I guess.

Q. Do you know, based on your review of the epidemiologic literature, what proportion of

3 women are said to use talc?

A. I believe I've seen in some of the

<sup>5</sup> literature -- it depends on the population, I

6 think. I think I saw -- well, again, I'd have to

<sup>7</sup> pull out the papers to be absolutely certain, but

8 I remember there was a reference to

<sup>9</sup> African-American women, about 50 percent of them

10 using talc.

Q. Would you say that in 50 percent of the

12 gynecologic specimens you review, you find

13 foreign-body granulomas or granulomas?

A. Well, I wouldn't necessarily expect --

15 I wouldn't expect to, just because, you know,

<sup>16</sup> again, we're looking at an ovarian tumor at a

very particular point in time.

How many granulomas -- how much talc is

19 getting to the ovary, we don't -- we don't know

20 how much talc is getting to the ovary. We know

21 it's been found there, we know it can get there,

22 but we don't know with how much use, how much is

<sup>23</sup> actually getting there.

So we wouldn't necessarily find a lot of

granulomas in ovarian tissue of women that use

Page 116

I mean, it's not -- it's not frequent that

<sup>2</sup> you're going to find foreign-body giant cell

<sup>3</sup> reactions in tissue, but, again, it doesn't mean

<sup>4</sup> that they weren't there. Maybe --

Q. And this is based just on your

<sup>6</sup> experience. I know that -- I don't want you to

<sup>7</sup> guess about what might have been there --

A. Yeah, I'm --

<sup>9</sup> Q. -- but based on your experience as a

practicing pathologist.

11 A. It would just be a pure guess at this

 $^{\rm 12}\,$  point. I couldn't give you an accurate number.

Q. Do you see foreign-body reactions in

<sup>14</sup> 50 percent of the gynecologic specimens or cases

that you review?

16

21

24

MR. ROTMAN: Objection.

A. I would say it's less than 50 percent.

Q. Is it less than 25?

A. I would say less than 25.

Q. Less than ten?

A. Probably less than ten.

Q. Less than five?

A. That's where I'm not exactly sure.

Q. Okay.

MS. AHERN: All right. We can go ahead

Page 115

<sup>1</sup> it, because we don't know exactly how much is

<sup>2</sup> getting there or we don't know how long those

<sup>3</sup> granulomas are there once the tissue is in the

<sup>4</sup> ovary.

I mean, 20 years later, when you're looking

6 at the -- at the ovary for a talc particle that's

<sup>7</sup> been there, we don't know if the granuloma would

<sup>8</sup> still be there or the chronic inflammation would

<sup>9</sup> still be there.

Q. And my question wasn't specific to

ovarian tissue; it was just gynecologic

<sup>12</sup> specimens.

10

16

17

22

Because you review more than ovarian tissues

when you're looking at gynecologic samples;

15 correct?

A. Yes.

Q. So looking at all of your gynecologic

18 specimens, your vaginal, vulvar, endometrial,

19 tubal, ovarian, I guess omentum might fall in

20 there, how often do you identify foreign bodies

<sup>21</sup> or foreign-body granulomas?

A. I would have to be -- a completely

<sup>23</sup> ballpark guess, but, I don't know, maybe every --

<sup>24</sup> I'm really trying to figure out a somewhat

<sup>25</sup> ballpark figure. It's tough.

Page 117

<sup>1</sup> and take a break. Thank you.

THE VIDEOGRAPHER: Here ends Media 2.

<sup>3</sup> Off the record, 11:44 a.m.

(A recess was taken.)

THE VIDEOGRAPHER: Here begins Media

<sup>6</sup> No. 3 in today's deposition of Sarah Kane, M.D.

<sup>7</sup> Back on the record, 12:02 p.m.

8 BY MS. AHERN:

9 Q. All right. Doctor, can we go ahead and

10 keep moving through that photocopy, Exhibit 11.

11 Can you tell me what the next page was?

A. Okay. We just read from Page 540, I

believe, so the next one is Page 648.

4 Q. Okay. And tell me what on 648 caught

15 your eye.

A. Okay. It's the first paragraph under

7 "Noninfectious Granulomatous Peritonitis." So it

<sup>8</sup> says, "Foreign material typically recognizable on

histologic examination can elicit a granulomatous

reaction on the peritoneum. Starch granulomas

from surgical gloves, douche fluid, and

22 lubricants typically incite a granulomatous and

<sup>23</sup> fibrosing peritonitis. In occasional cases, the

inflammatory reaction may be a tuberculoid type

<sup>25</sup> with KCS necrosis. The periodic acid shift (PAS)

Page 118

1 positive starch granules exhibit the

<sup>2</sup> characteristic Maltese cross configuration" --

THE COURT REPORTER: I'm sorry, you're

<sup>4</sup> reading too fast.

THE WITNESS: I'm sorry.

6 A. "The periodic acid shift (PAS) positive

starch granules exhibits a characteristic Maltese

8 cross configuration under polarized light. Talc

<sup>9</sup> was once an important cause of granulomatous and

10 fibrosing peritonitis because of its use as a

11 lubricant on surgical gloves and talc-induced

12 peritonitis has been described more recently in

 $^{13}\,$  drug abusers." I think that's kind of where it

14 stops.

5

Q. Okay. And how does that passage that

16 you just read inform your opinions in this case?

A. Well, again, it's just another --

18 similar to the last pieces, this is the

<sup>9</sup> peritoneum, so this is outside of the fallopian

20 tube. Once particles are outside of the

21 fallopian tube, they are in the peritoneum.

22 That's where the ovary is. And so it's

<sup>23</sup> discussing foreign-body granulomatous reactions

<sup>24</sup> in the peritoneum.

Q. And this question -- this passage that

<sup>1</sup> head.

Q. And when you say "they" were looking

Page 120

Page 121

<sup>3</sup> at, are you talking -- who are you talking about?

A. When the -- when the regulatory -- if I

<sup>5</sup> recall -- did I put that in my report? -- they

<sup>6</sup> removed -- I know that they removed starch from

<sup>7</sup> surgical gloves because it was causing an

8 inflammatory reaction.

And they had started using starch more

o commonly because talc had been removed from

surgical gloves for also causing inflammatory

<sup>2</sup> reactions.

Q. And talc particles and cornstarch

particles cause the same foreign-body reaction in

the peritoneum and fibrosis; correct?

A. Well, again, they can cause a

<sup>17</sup> granulomatous reaction, but they're

<sup>18</sup> bioabsorbable, so it's not going to be -- you

<sup>19</sup> know, when we're talking about talc, we're

<sup>20</sup> talking about the talc in surgical gloves. And,

21 you know, talc is not bioabsorbable and it will

22 stay in the peritoneum longer than starch, which

23 is bioabsorbable. So it will -- the inflammation

<sup>24</sup> will likely resolve more quickly. It's a

<sup>25</sup> different -- it's a different type of reaction

Page 119

<sup>1</sup> you just read also mentions that starch granules

<sup>2</sup> from surgical gloves --

<sup>3</sup> A. Yes.

Q. -- cause granulomatous and fibrosing

<sup>5</sup> peritonitis, which is the same that they mention

6 talc use to.

Would you say that starch granules, then,

8 have the capacity to cause chronic inflammation

<sup>9</sup> that can lead to cancer?

A. Starch can cause inflammatory

11 reactions, but it's a -- very different, in that

12 it's bioabsorbable, and so the particles are

<sup>13</sup> absorbed in the body. And the literature hasn't

<sup>14</sup> supported a link between starch and ovarian

15 cancer.

10

16

17

Q. How many studies have evaluated the association between starch and ovarian cancer?

A. I couldn't say, off the top of my head,

19 how many. But I know, you know, they looked at

<sup>20</sup> starch when they were evaluating whether or not

21 to remove it from surgical gloves, and they ended

<sup>22</sup> up deciding to remove it from surgical gloves.

And I -- I think at that point they had done

<sup>24</sup> a literature search. I don't think there was --

<sup>25</sup> I don't know how many studies off the top of my

<sup>1</sup> because it's bioabsorbable.

Q. Well, they both cause granulomas;

3 right?

4 A. Mm-hmm.

Q. And they both cause fibrosis; correct?

6 A. They can cause fibrosis.

Q. Does the biodurability of the causative

8 agent determine how long fibrosis exists?

A. Well, the fibrosis is thought to arise

from the inflammatory process. And since -- I

11 don't know how much data is really there except

12 to say that starch is bioabsorbable and talc is

13 not. So talc is going to be available for an

inflammatory response more than a starch particle

15 will.

20

Q. Is the purpose of a foreign-body

granuloma to essentially wall off an irritant, a

18 foreign body, from the rest of the tissue to

prevent damage?

A. That can be one reason.

Another reason is if the particle is large

22 enough and one macrophage can't handle it because

23 of its size, it will sort of recruit more

24 macrophages to the area to try to digest the

<sup>25</sup> foreign material, which is not going to -- they

Page 122

1 won't be able to digest the talc particle.

- Q. If they can't digest the particle,
- <sup>3</sup> these macrophages will fuse to form a
- 4 multinucleated giant cell and surround the
- <sup>5</sup> particle to basically encapsulate it and prevent
- 6 it from harming the surrounding tissue; correct?
- A. It's possible that they would, yes,
- 8 they would recruit more macrophages and
- <sup>9</sup> potentially do that.
- Q. Isn't that the purpose of a
- <sup>11</sup> foreign-body granuloma?
- A. So, again, you can get well-formed --
- 13 you can get well-formed encapsulated granulomas.
- 14 You can also get sort of poorly formed granulomas
- $^{15}$  that are -- when more macrophages have been
- <sup>16</sup> recruited to that site.
- You can get a -- you can get a histiocytic
- 18 reaction that isn't a well-formed granuloma in
- 19 the sense that you're talking about, where it's
- <sup>20</sup> kind of walling off the foreign body. You can
- 21 get histiocytic reactions that aren't as well
- 22 formed like that.
- Q. But we're just talking about the actual
- granuloma itself, those particles that do result
- <sup>25</sup> in a well-formed granuloma.

Page 123

- Once that granuloma has formed, it can
- persist for many years, can't it, without
- <sup>3</sup> damaging the surrounding tissue?
- MR. ROTMAN: Objection.
- 5 A. I think it would depend. Macrophages
- 6 have a certain lifespan, so it's going to be
- <sup>7</sup> constantly recruiting different macrophages to
- <sup>8</sup> that site.
- 9 So I don't think we can say for certain that
- 10 the -- in fact, I think the body is still
- 11 reacting to that foreign body if it's still
- 12 recruiting new macrophages in.
- Q. Do you know that for a fact based on
- 14 your reading of the literature of granulomas,
- 15 that that's the mechanism behind a foreign-body
- <sup>16</sup> granuloma, as opposed to an immune granuloma?
  - A. What I'm saying is -- is that
- 18 macrophages have a certain shelf life, and so
- 19 they will constantly recruit new macrophages to
- <sup>20</sup> that area.

17

- Now, whether or not there's an exposure in
- 22 that particle while it's in that process, I don't
- $^{23}$  think we can definitively say.
- Q. Can you cite to any papers that support
  - <sup>5</sup> your understanding of that process whereby

Page 124

- <sup>1</sup> macrophages are continuously recruited to
- <sup>2</sup> foreign-body granulomas?
- A. I know that I've read it in the course
- <sup>4</sup> of my daily practice. I can search at some point
- <sup>5</sup> for it, but I know that that's the case, because
- <sup>6</sup> I know that macrophages, again, have a certain
- <sup>7</sup> lifespan.
  - But, you know, again, the inflammatory
- <sup>9</sup> response, we also don't know how long that
- <sup>10</sup> inflammatory response is going to be there for
- 11 sure. Is it possible that at some point the
- 12 granuloma resolves and you get some fibrosis and
- the talc particle or whatever particle is there
- <sup>4</sup> remains? I think that's possible and likely, in
- <sup>15</sup> fact, because you do see resolution of granulomas
- <sup>16</sup> with fibrosis.

17

- Q. Is fibrosis associated with the
- <sup>-8</sup> development of ovarian cancer?
- A. There hasn't -- there hasn't been a
- 20 lot -- again, the causes of ovarian cancer are
- 21 sort of -- the literature and the research is
- 22 still bearing all of it out, but from what I know
- <sup>23</sup> of the literature, I don't think that they found
- <sup>24</sup> fibrosis itself being an increased risk factor
- <sup>25</sup> for ovarian cancer.

Page 125

- <sup>1</sup> Q. Is fibrosis associated with chronic
- <sup>2</sup> inflammation?
- <sup>3</sup> A. It can be, yeah. Chronic inflammation
- <sup>4</sup> can lead to fibrosis.
- Q. Do you know of any literature that has
- 6 linked talc granulomas introduced into the body
- <sup>7</sup> through the use of talc-dusted surgical gloves
- 8 with any sort of cancer?
- <sup>9</sup> A. So we know that talc can -- there are
- studies that have shown talc in the ovaries, and
- we know that chronic inflammation has been
- 12 implicated in cancer.
- So if talc can reach the ovaries -- and we
- <sup>14</sup> also have evidence that talc causes chronic
- <sup>15</sup> inflammation. So if talc reaches the ovary, I
- think it's a plausible mechanism for talc from
- surgical gloves to cause an inflammatory reaction
- and lead to cancer. I think that's plausible.
- And, again, that's the plausibility arm of
- 20 it. You know, that's a piece of the general
- 21 causation opinion, but, you know, they're still
- piecing together a lot of the etiology of ovarian
- <sup>23</sup> cancer.

- Q. Then why --
  - MR. KLATT: Objection, nonresponsive.

Page 283 of 565 PageID: Page 126 Page 128 1 MS. AHERN: Nonresponsive, yeah. MS. AHERN: No. We're going back to 2 Q. Doctor, why are you so sure, then, that this question. <sup>3</sup> talc causes ovarian cancer? MR. ROTMAN: Okay. That's fine. A. It's --4 So you're asking her again a question 5 MR. ROTMAN: Objection. that she previously answered. A. So I can lay out to you my methodology. 6 MR. KLATT: No --<sup>7</sup> It's in the report. I did very in-depth, 7 MS. AHERN: I'm interested in --8 extensive review of the literature, which 8 MR. KLATT: -- a question she didn't <sup>9</sup> included the epi studies, animal studies, and answer. 10 <sup>10</sup> biologic studies. MS. AHERN: -- the question she didn't 11 And I think -- well, I know that the epi answer first. 12 studies have been very consistent with the BY MS. AHERN: 13 increased risk associated with talcum powder Q. Which is: "Do you know of any product usage -- I'm talking about talcum powder literature that has linked talc granulomas product, what's in the bottle -- and perineal introduced into the body through the use of <sup>16</sup> talc application with ovarian cancer. talc-dusted surgical gloves with any sort of And I think if you're looking at -- if you cancer?" <sup>18</sup> go through the methodology that I used and you're 18 Do you know or not know of any literature 19 looking at the Bradford Hill analysis, which I've that supports that? 20 20 laid out in the report, I've come to the A. Well, first of all, I think we're 21 professional -- you know, my professional 21 talking about -- you're talking about surgical <sup>22</sup> judgment is that the talcum powder products -glove talc, right, which is pharmaceutical-grade <sup>23</sup> weighing everything, that talcum powder products talc, which is different from the talcum powder <sup>24</sup> cause ovarian cancer. product that I'm opining about. And I know -- and, interestingly, about And we know that these talc particles can Page 127 Page 129 <sup>1</sup> three weeks after I wrote my report, there was 1 get to the ovary and we know that talc can cause <sup>2</sup> the Health Canada report that, in reading their <sup>2</sup> chronic inflammation. <sup>3</sup> methodology and the literature that they Q. Doctor, first question about your <sup>4</sup> reviewed, was very similar to what I reviewed and 4 answer is: What makes you think that cosmetic <sup>5</sup> talc used in Johnson & Johnson baby powder is not <sup>5</sup> my methodology. And they came to the same <sup>6</sup> conclusion. pharmaceutical-grade talc? A. I'm talking about the product, the 7 MR. KLATT: Objection. 8 MS. AHERN: Objection. Nonresponsive. ultimate product. 9 9 Q. Doctor, my question was: Do you know Q. Johnson's baby powder; correct? 10 10 of any literature that has linked -- sorry. A. Whatever is in the bottle.

- 11 My first question we're going to go back to
- 12 now is: Do you know of any literature that has
- 13 linked talc granulomas introduced into the body
- through the use of talc-dusted surgical gloves to
- <sup>15</sup> any sort of cancer?
- 16 MR. ROTMAN: Objection.
- 17 MS. AHERN: What's the objection?
- 18 MR. ROTMAN: Your question was --
- 19 MS. AHERN: I'm reading it.
- 20 MR. ROTMAN: -- why are you so certain.
- 21 MS. AHERN: Well, I just told you we're
- going back to this question. 22
- 23 MR. ROTMAN: Okay. So you're asking --
- you're not saying that she didn't -- you're not
- <sup>25</sup> repeating your former question?

- 11 Q. You're saying that's not
- pharmaceutical-grade talc?
  - A. Whatever is in the bottle.
- 14 Q. Okay.
- 15 A. So --

- Q. What is your -- what is your
- understanding of what pharmaceutical-grade talc
- is and how is that different from what's in
- Johnson's baby powder?
- A. So I didn't opine on the constituents
- of the talcum powder that -- the baby product --
- talcum powder products, the Johnson & Johnson. I
- saw evidence as to what's in the talcum powder
- products, but I didn't do my own analysis as to
- what is in the talcum powder products.

- 1 But pharmaceutical-grade talc, if we're
- <sup>2</sup> talking about talc that's used in pleurodesis,
- <sup>3</sup> for example, is going to be different than talcum
- powder products in the bottle --5
  - Q. Okay.
- 6 A. -- cosmetic talcum powder products.
- Q. So how is it different?
- A. So, again, I didn't do my own analysis
- as to what is in the talcum powder product, but
- 10 that's what I am -- that's what my general
- <sup>11</sup> causation opinion is on, is the talcum powder
- 12 product in the bottle, that regular perineal use
- <sup>13</sup> of that causes ovarian cancer.
- Q. My question to you is: What do you <sup>15</sup> understand the difference between the talcum
- powder products and pharmaceutical-grade talc --
- 17 MR. ROTMAN: Objection.
- 18 Q. -- to be?
- 19 A. So I've seen evidence that in talcum
- 20 powder products, there are heavy metals. There
- are fragrances that are added to the talcum
- powder product that, in talc used for
- pleurodesis, they wouldn't be adding fragrances
- <sup>24</sup> to that type of talc.
- Q. Would -- you're not saying that talcum

- A. Well, I think I've answered, like, to
- <sup>2</sup> me, it doesn't -- it doesn't really matter
- <sup>3</sup> what -- the difference between pharmaceutical

Page 132

Page 133

- <sup>4</sup> talc and talcum powder products; it's whatever is
- <sup>5</sup> in that talcum powder products -- product,
- <sup>6</sup> whatever is in the bottle that women are buying
- off the shelf and applying to their perineum.
- MR. KLATT: Objection. Nonresponsive.
- MS. AHERN: Objection. Nonresponsive.
- Q. My question was -- originally was: Do
- you know of any literature that connects talc
- dust of surgical gloves and any sort of cancer.
- 13 And then you said, "First of all, I think
- we're talking about surgical glove talc, which is
- a pharmaceutical-grade talc, which is different from the talcum powder product that I'm opining
- about."
- 18 So what I'm asking you is: What is
- different about the talcum powder product that
- 20

24

- 21 A. It's what I'm opining about. You know,
- 22 I haven't --
- 23 Q. Right.
  - A. -- looked at the talc that's used for
- pleurodesis, for example. It's what I'm

Page 131

- 1 powder products that are sold to consumers have
- <sup>2</sup> been altered to add heavy metals, are you?
- A. Well, I've seen the report of
- <sup>4</sup> Dr. Crowley that looks at heavy metals and
- <sup>5</sup> fragrances in the talc, the baby product talc
- 6 powder that he examined. I did not do my own
- analysis of that.
- Q. Does pharmaceutical-grade talcum powder
- <sup>9</sup> also have associated metals and sometimes heavy
- 10 metals?
- 11 A. I'm not sure if I've seen data as to
- 12 what is specifically in pharmaceutical-grade
- 13 talcum powder, but, again, to me, what is
- 14 important is the ultimate product and what is in
- 15 that bottle. It can -- whether it's platy talc,
- <sup>16</sup> fibrous talc, asbestos, heavy metals, fragrance
- <sup>17</sup> metals.
- 18 I mean, to me -- you know, I've seen
- <sup>19</sup> evidence of those things in that product, but to
- 20 me, what I'm looking at is the final product when
- 21 it comes to causing ovarian cancer.
- Q. So what is different about that final
- <sup>23</sup> product and pharmaceutical-grade talc? What
- 24 specific components have been added to that that
- <sup>25</sup> affect your opinions in this case?

- <sup>1</sup> separating out.
- I've looked at the talcum powder product
- <sup>3</sup> that women use on their perineum, what they
- <sup>4</sup> bought off the shelf. I haven't looked at
- pharmaceutical-grade -- let me correct that --
- pleurodesis talc, for example. I have not looked
- at pleurodesis talc and ovarian cancer. I have
- not looked at any literature specifically on
- that. It's been the talcum powder products that
- women are buying off the shelf and using on their 11
  - perineum.
- 12 Q. So if I told you that Johnson's baby
- powder starts out as pharmaceutical-grade talc
- and that, beyond that, fragrance is added, would
- it be the fragrance that you're taking issue with
- that you believe is causally associated with the
- 17 development of ovarian cancer?
  - A. Again, I -- it's whatever is in that
- bottle. It could be platy talc, fibrous talc,
- asbestos, heavy metals, fragrance. It -- to me,
- it's the product, whatever the product is that
- they are using.

- Q. And you have done a biologic
- plausibility analysis for fragrances, for metals,
- <sup>25</sup> for asbestos, for fibrous tale, and for platy

Page 134 Page 136 1 talc --<sup>1</sup> consistency piece of it. A. So --Q. Can I ask you -- you can go through all 3 <sup>3</sup> of it if you want, but would you rather break it O. -- each one of those constituents? down piece by piece? A. So I have looked at evidence -- so <sup>5</sup> Dr. Crowley's report, I mentioned. I've looked MR. ROTMAN: She should answer your <sup>6</sup> at Dr. Longo's report. I've looked at Hopkins question. <sup>7</sup> and the Pier charts from their depositions. I'm MS. AHERN: I'm not sure she's 8 aware of evidence that these heavy metals and answering my question. My question was: How do <sup>9</sup> fragrances and asbestos are in there. you come up with causation when you don't know 10 However, I haven't done -- what I know, I what the exposure is? 11 looked at the -- I've looked at some literature 11 MR. ROTMAN: I think she's answering 12 the question. 12 and I've looked at the IARC categorization of the 13 13 heavy metals. I've looked at Dr. Crowley's MR. TISI: That wasn't the question. 14 report and I've done an extensive look at The question was: Do you need to know the agent? <sup>15</sup> asbestos and ovarian cancer. And she said the agent is the product. 16 But, ultimately, those are just pieces of 16 BY MS. AHERN: <sup>17</sup> biological plausibility. What I'm mainly -- what 17 Q. The agent is everything in it? 18 I am opining about is the ultimate product. And, A. Yes, the agent is whatever is in that 19 again, it can be platy tale, it can be fibrous talcum powder product. 20 <sup>20</sup> talc, it can be asbestos, it can be heavy metals. Q. So are you basing, then, your causation It's pieces of information that strengthen 21 conclusions on the epidemiologic literature 22 the plausibility. We know that asbestos causes 22 alone? 23 <sup>23</sup> ovarian cancer, that certain heavy metals are A. The epidemiologic literature is very <sup>24</sup> carcinogens, which the IARC categorized them as. comp- --25 25 So it's just -- it's just additional pieces of MR. ROTMAN: She was not done with her Page 135 Page 137 <sup>1</sup> information that strengthen the biological <sup>1</sup> earlier answer. Now you've gone two more beyond <sup>2</sup> it. <sup>2</sup> plausibility arm of it. Q. Doctor, how do you arrive at a MS. AHERN: She's answering. Why don't <sup>4</sup> causation conclusion without a well-defined agent you let her answer. If she wants to go back, she of exposure? 5 can. 6 MR. ROTMAN: Objection. MR. ROTMAN: No, I want her to go back. Q. Do you understand what I'm asking you? She was -- she was in the middle of going through 8 How do you arrive at your causation and her Bradford Hill to answer your earlier question conclusion when you're not sure what it is about and you cut her off. So she had covered strength 10 the talcum powder products that's actually of association. <sup>11</sup> biologically relevant? 11 BY MS. AHERN: 12 A. Well, I think -- well, strike that. 12 Q. Doctor, you can answer the question the 13 The epi studies are looking at the product way you want to answer the question. 14 that the women are using. So that is the agent. MR. ROTMAN: Now there's no question in 15 front of her. 15 It's the -- it's the total product. That is the 16 agent. 16 MS. AHERN: Well, because you 17 So when you're looking through -- let me interrupted it. 18 just -- so let's keep in mind that we're looking MR. ROTMAN: Let's go back to what the at that product. 19 question was before you cut her off. "Do you 20 And then if you go through my Bradford Hill understand what I'm asking you? How do you <sup>21</sup> analysis, you look at strength of association. arrive at your causation and conclusion when <sup>22</sup> And, overall, there's a consistent relative risk you're not sure what it is about the talcum <sup>23</sup> that's between 1 and 2. I would say it's, across powder products that actually biologically --<sup>24</sup> studies, averaging 1.3 to 1.4 relative risk, and <sup>24</sup> that are biologically relevant?"

25

25 that's consistent across studies. That's the

And then you gave -- then you started

- an answer about the epi studies are looking at
   the product that the women are using, and you
- were talking about strength of association and
- 4 then you said, "And that's consistent across
- <sup>5</sup> studies. That's the consistency piece of it,"
- <sup>6</sup> and then you were interrupted.
- So were you done with your answer to that earlier question?
- 9 THE WITNESS: I can continue, because I <sup>10</sup> think it's important.

I mean, I was -- my general causation opinion, the methodology I used was to answer the

question: Does perineal application of talcum
 powder products, the, you know, baby powder

<sup>15</sup> product that you buy off the shelf, does that

cause ovarian cancer? So it's whatever is inthat bottle.

So with the methodology that I used, looking at the epi data, but also considering the

Bradford Hill criteria -- which, you know,
 looking for specificity is another one. So most

22 of the studies showed a stronger -- a strong

23 association with serous ovarian cancer, but it

<sup>24</sup> was basically associated with epithelial ovarian

<sup>25</sup> cancer, so all groups of epithelial ovarian

Page 139

- <sup>1</sup> cancer. It was pretty specific, the epi data,
- <sup>2</sup> for that type of ovarian cancer.
- Temporality. If you look at that, I
- 4 mean, the case-control studies are retrospective
- reviews, so we know that they were using talc
   before their diagnosis of ovarian cancer.
- Biological gradient. For those studies
- that looked at a biological gradient, there was
- <sup>9</sup> an evident -- there was evidence of a
- 10 dose-response, not all of the times statistically
- 11 significant, but the trend -- you can see a trend
- 12 of a dose-response across studies.
- And then we get into the plausibility
- piece, which you've been discussing mostly so far
- 15 in this deposition, which has to do with the
- <sup>16</sup> plausible mechanism of talcum powder -- what I'm
- <sup>17</sup> thinking of, talcum powder products -- whatever
- 18 is in that bottle was what I'm looking at --
- 19 talcum powder products causing -- the
- <sup>20</sup> plausibility of it causing a chronic inflammatory
- <sup>21</sup> response, leading to ovarian cancer. We've been
- <sup>22</sup> discussing that quite a bit today.
- And then coherence. So I can refer again to my report. Coherence, in this context,
  - <sup>5</sup> means coherence between epidemiologic and

1 agc 140

- generally accepted knowledge of the disease inquestion.
- So we know that particles can reach the
- <sup>4</sup> ovary. We know that talc can cause chronic
- <sup>5</sup> inflammation. We know that chronic inflammation
- <sup>6</sup> is associated with certain types of cancer. We
- <sup>7</sup> know that certain types of ovarian cancer have
- 8 shown association with chronic inflammatory
- conditions.

O So, again, going through all this is

- <sup>1</sup> experiment and analogy, experiment with the
- <sup>2</sup> animal studies and the in vitro studies. And
- analogy, I used the example of asbestos, because
- <sup>14</sup> even though asbestos is -- you know, asbestos is
- chemically similar, you can have asbestos fibers
- and talc fibers, but it's a similar mineral
- 17 chemically, and we know that that is a
- 8 carcinogen. So that's part of the analogy.
- But, again, it's the whole picture. I
- mean, you look at the -- all of this data
- following my methodology and you apply the
- <sup>22</sup> Bradford Hill criteria guidelines -- the Bradford
- <sup>23</sup> Hill guidelines. And, looking at all that, my
- professional judgment is that the talcum powder
- <sup>25</sup> products can cause ovarian cancer.

- Q. Okay. Are you done? I don't want to interrupt you.
- A. I think I answered the question.
- Q. Okay. One of the things, and I guess a
- 5 major component of the talcum powder products,
- 6 would be talc; correct?
  - A. Presumably -- it's called talcum
- 8 powder, so presumably, talc would be a
- <sup>9</sup> constituent.
- Q. Do you know what percentage of talcum
  - powder products is talc?
- 12 A. Again, I did not do my own analysis as
  - 3 to how much tale was in that product.
  - Q. Do you know whether any of the heavy
- <sup>5</sup> metals that you looked at or were examined by
- other experts in this litigation, whether any of
- <sup>7</sup> those are known carcinogens for the ovary?
- A. So it's another piece of information.
- <sup>19</sup> There is not, to my knowledge -- looking at what
- the IARC looked at, there's not data right now on
- 21 those heavy metals and ovarian cancer, but
- 22 it's -- it's a -- it's a piece of the puzzle.
- 23 It's a piece of information.
- The IARC has called some of them
- <sup>25</sup> carcinogenic, some of them probably carcinogenic,

<sup>1</sup> so we know that they can cause cancer. And if <sup>2</sup> they're in the talcum powder products, then it's <sup>3</sup> just another piece to the puzzle of plausibility.

- Q. Are you saying that the probably <sup>5</sup> carcinogenic category for IARC means that they can cause cancer?
- A. Well, we can look at what the IARC 2A <sup>8</sup> categorization -- category actually says, what they break it down. But my understanding is <sup>10</sup> it's -- probably carcinogenic means it probably causes cancer, more likely than not, probably <sup>12</sup> causes cancer.
- O. How many categories does IARC have? 13
- 14 A. They have four.
- 15 Q. What is the -- what is Category 1?
- 16 A. Carcinogenic.
- 17 Q. Known to be carcinogenic?
- 18 A. Mm-hmm.
- 19 Q. And then the next?
- 20 A. Probably carcinogenic.
- 21 Q. And then?
- 22 A. Possibly carcinogenic.
- 23 Q. And then?
- 24 A. I think it's unclassifiable. I have to
- <sup>25</sup> look. But I think it's uncertain, basically.

- Q. And then what is the last? 1
- 2 A. And then known not to be carcinogenic.
- Q. How many agents are in the known not to
- 4 be carcinogenic category?
- A. Very, very few.
- 6 Q. One; right?
- A. That's plausible. I haven't looked at
- the list recently. 8
- Q. So going back to the major component, you don't know what percentage of talcum powder
- <sup>11</sup> products are actually talc?
- 12 MR. ROTMAN: Objection.
- A. I have not done my own analysis as to what the components are of that talcum powder -of the talcum powder products.
- 16 Q. Do you agree that carcinogens can be
- 17 organ specific? 18
- A. I will agree that certain tissues
- respond to certain things differently.
- Q. Do you agree that carcinogens can be 20 21 organ specific?
- 22 A. Certain tissues respond to certain
- <sup>23</sup> things differently. If you're casting that wide
- <sup>24</sup> a net to say that one specific carcinogen only
- <sup>25</sup> causes one type of cancer, I think that's a

Page 144

Page 145

- <sup>1</sup> little too wide a net. I think science is always
- <sup>2</sup> evolving and there's always the possibility of an
- <sup>3</sup> unknown cause of a certain type of cancer.
  - MS. AHERN: Objection. Nonresponsive.
- Q. My question was just: Can carcinogens <sup>6</sup> be organ specific?
  - A. And I feel like I answered that fairly.
- Q. Do you know of carcinogens that are
- organ specific?
- A. I know -- for example, we know that H. Pylori causes increased risk of gastric cancer, <sup>12</sup> but not oral or esophageal cancer.

We know that HPV infection can cause cervical cancer, anal cancer, certain types of squamous cell carcinomas of the oropharyngeal system, but not, you know, of the endometrium, for example.

So we know that certain things cause certain cancers and aren't -- haven't been associated with other types of cancers. But to cast that wide a net, to say that a carcinogen is only going to cause one type of cancer or this cancer is caused only by this carcinogen, I think that's <sup>24</sup> too wide a net, because I feel like research is constantly evolving. We're constantly learning

Page 143

<sup>1</sup> of new causal factors in cancer.

Q. Do you think that dose is an important consideration when you're looking at the

toxicologic effects of an agent on a tissue?

A. I think it is a piece of information.

<sup>6</sup> I'm looking at my biological gradient portion of my report, and I said in my report that it was an

important factor in my analysis because it does

add information to the overall causality.

- Q. Are there agents that can be toxic at <sup>11</sup> certain levels and not toxic at other levels?
- 12 A. There are certainly agents that are more toxic with increased exposure and increased duration. We don't know all of the thresholds for carcinogenicity of all carcinogens.
- 16 Q. As part of the biologic plausibility analysis that you would do on a particular agent, would that take into consideration the relative levels of exposure that a person would have to that agent?
- A. Well, dose-response -- I -- I'm taking 22 it -- your question -- can you rephrase the
- question? I'm sorry. I just want to make sure
- I'm answering it accurately.

25

Q. To determine whether it's biologically

Page 146

1 plausible for a particular agent to cause a

- <sup>2</sup> particular harm, would you need to be able to
- <sup>3</sup> characterize the dose of that agent that is
- <sup>4</sup> required to elicit the effect that you're looking
- 5 for?
- 6 A. I think it's a piece of the
- <sup>7</sup> information -- a piece of information, but you're
- 8 not always going to be able to determine a
- <sup>9</sup> dose-response. It's going to depend on the
- <sup>10</sup> carcinogen, the agent, the routes of exposure.
- 11 You're just not always going to have that data,
- 12 unfortunately. It would be nice to have, but
- 13 you're not always going to have it, and you don't
- 14 necessarily have to have it to come to
- <sup>15</sup> plausibility.
- Q. And do you have well-characterized
- 17 levels of exposure to the ovaries for women who
- <sup>18</sup> are using talc perineally?
- MR. ROTMAN: Objection.
- A. So some of the -- we're never really
- 21 going to be able to figure out what an actual --
- 22 to characterize what an actual dose -- dose of
- 23 talcum powder product of what -- of a talcum
- <sup>24</sup> powder product in a particular use. We don't
- 25 know how much a woman is putting on her hand to

Page 148

Page 149

- <sup>1</sup> and ovarian cancer. I certainly saw some of the
- <sup>2</sup> data about talc migration and cornstarch on
- <sup>3</sup> surgical gloves migration, but I didn't
- <sup>4</sup> specifically -- I don't know if -- I don't even
- <sup>5</sup> know if that study has really been done.
- Q. Did you consider the publications on
- <sup>7</sup> talc responses -- or, excuse me, did you consider
- 8 the publications on granulomatous reactions to
- <sup>9</sup> talc from surgical gloves to be relevant to your
- biologic plausibility analysis?
- A. It's a piece of information that
- 12 talc -- now, again, surgical glove talc, for me,
  - is different than the talcum powder products.
- You know, my general causation opinion -- I
- <sup>15</sup> just want to be clear -- is about, you know,
- 16 talcum powder products, not the talc used in
- pleurodesis, not talc on surgical gloves.
- 8 Having said that, I think it's an important
- piece of information to know that talc on
   surgical gloves can cause a granulomatous
- <sup>21</sup> reaction, because that is further evidence for
- <sup>22</sup> plausibility that talcum powder products --
- 23 they're called talcum powder products, so, again,
- <sup>24</sup> it's sort of an assumption. It doesn't really
- <sup>5</sup> matter to me what's in there, but my assumption

- 1 place into the perineum. We don't know how much
- <sup>2</sup> of that product is getting to the ovary. We know
- <sup>3</sup> that it can get to the ovary because we've seen
- <sup>4</sup> talc in the ovary. But where -- it's extremely
- <sup>5</sup> difficult in this type of situation, when women
- use the product differently, to know what the
   dose -- what a single dose is.
- 8 Now, if you're talking long-term, frequent
- <sup>9</sup> use of talcum powder products, of course, the
- exposure is going to be greater than a single use
- 11 of that product.
- But are we ever going to know what one dose
- 13 of talcum powder product is? I don't think we're
- 14 going to be able to say that and how much of one
- <sup>15</sup> dose reaches the ovary.
- But, certainly, again, with -- over time,
- <sup>17</sup> increased frequency and duration, it's -- you
- 18 know, more of that product is going to reach the
- 19 ovary.
- Q. So going back to the discussion we had
- 21 earlier about surgical glove talc, do you know of
- 22 any literature that links exposure to talcum
- 23 powder -- pharmaceutical-grade talcum powder from
- <sup>24</sup> surgical gloves to any kind of cancer?
- A. I did not opine on surgical glove talc

- 1 is that whatever -- the talc or whatever is in
- <sup>2</sup> that product is causing the -- a chronic
- <sup>3</sup> inflammation. And so it's part -- it's a piece
- <sup>4</sup> of evidence for the plausibility.
- Q. So are you not aware of any studies,
- <sup>6</sup> based on the review that you did conduct, that
- 7 link surgical glove talcum powder with the
- 8 development of any cancer?
- 9 MR. ROTMAN: Objection.
- A. So I'm not sure how you could do that.
- If you're looking at patients who -- I think that
- would be a very difficult study to design.
  - If you're looking at women -- if you're
- 4 doing a case-control study -- I'm just
- thinking -- and you're looking at patients who
- 16 have been diagnosed with ovarian cancer who have,
- at any time, had surgery during the time period
- 18 that talc was used on surgical gloves, I think
- that would be a difficult study.
- Q. My question to you was --
- MR. KLATT: Objection. Nonresponsive.
  - Q. My question to you was: Are you aware
- of any studies or literature that link
- <sup>24</sup> talc-dusted surgical gloves to the development of
- 5 any kind of cancer?

Page 152 Page 150 1 MR. ROTMAN: Objection. <sup>1</sup> could be helpful information to my general 2 THE WITNESS: My thing is not --<sup>2</sup> causation opinion. So it's possible that I did. 3 Q. Is it in your report or cited in any of MR. ROTMAN: There's a button you can your reference lists? 4 push. 5 A. Again, I can look through my whole THE WITNESS: Oh, "follow." 6 <sup>6</sup> reference list. It's the same answer. Off the MR. ROTMAN: Do you see the button that's flashing on the right-hand -top of my head, I don't know the answer to that. Q. Do you know of any studies or any data THE WITNESS: Yeah. 9 that link foreign-body granulomas to the MR. ROTMAN: -- side? If you hit that, development of any kind of cancer? it should go to the bottom. 11 THE WITNESS: Okay. I see. Yup. A. Well, we know that asbestos can cause a 12 MS. AHERN: And I'll withdraw that, granulomatous reaction and asbestos is certainly <sup>13</sup> because there's -- the question asked first was, associated with mesothelioma and lung cancer. <sup>14</sup> I think, better. I slightly modified it on Q. Are there other biologic properties of <sup>15</sup> accident. 15 asbestos that contribute to its carcinogenicity? <sup>16</sup> BY MS. AHERN: 16 A. It can provoke a reactive oxygen species inflammatory response. Q. Are you aware of any studies, based on your review, that link surgical glove talcum Q. Can it disrupt DNA? 19 powder with the development of any kind of A. It can based on that mechanism, yes. 20 cancer? 20 Q. Have you seen any studies or data 21 suggesting that talcum powder can do those And, Doctor, to be clear, I'm only <sup>22</sup> interested in whether you know of a study, not 22 things? 23 whether one could be conducted. A. I've seen studies that show that talcum A. Off the top of my head, it's possible powder can increase production of reactive oxygen 25 that one exists, but I can't come up with one off species and can change gene expression in Page 151 Page 153 1 mesothelial cells. So, yes, I mean -- let me go 1 the top of my head. Q. Do you know of any data linking <sup>2</sup> back to your question. <sup>3</sup> surgical glove talcum powder with the development So I would say, yes, there are studies that 4 of any cancer? 4 show talc can cause the production of reactive 5 MR. ROTMAN: Objection. <sup>5</sup> oxygen species and reactive nitrogen species, 6 A. It would be my same answer. which can disrupt DNA, similar to asbestos. 7 Q. That you don't know, but there might Q. How do reactive oxygen and nitrogen 8 be? species disrupt DNA similar to asbestos? 9 A. Sitting here right now, I can't come up A. Well, it's the reactive oxygen species with a specific study that evaluated ovarian -- it's part of this feedback loop with -- what's 11 cancer patients who have had surgery with talcum the word I'm looking for? -- tumor factors like 12 COX and TNF alpha. It's related to those types powder gloves. 13 Q. Any cancer. Not ovarian cancer, any of expressions and an inflammatory response. 14 cancer. Q. Are you relying on cell studies? 15 15 A. Similar. Sitting here right now, I MR. ROTMAN: Objection.

<sup>16</sup> cannot think of one off the top of my head.

Q. And wouldn't that have been something 18 you think you would have picked up in your 19 review?

A. It's possible that I did. I just said 21 I can't think of it off the top of my head. It's 22 possible that I did at some point.

23 But my -- and, again, I tried to make every

<sup>24</sup> effort to be able to identify studies and

25 literature and evidence that were relevant or

A. I have looked at cell studies. The

Buz'Zard study is one, and I know Saed has done a lot with myeloperoxidase and ovarian cells. He

recently came out with a paper.

So it's, again, a piece of information towards the plausibility arm of my general causation opinion.

23 Q. Have you seen any studies in animals or in humans that have linked the specific enzymes that Dr. Saed has evaluated in cell studies to

Page 154

the development of ovarian cancer?

- A. So there have been some studies that
- <sup>3</sup> have looked at anti-inflammatory drugs, aspirin
- <sup>4</sup> and NSAIDs in particular.
- The data on NSAIDs has been less consistent,
- <sup>6</sup> but the data on aspirin has been consistent, in
- <sup>7</sup> that it lowers the risk of ovarian cancer with
- <sup>8</sup> regular aspirin use.
- 9 And aspirin, one of the mechanisms of action
- <sup>10</sup> is on the cyclooxygenase expression, which is
- 11 similar to the cyclooxygenase expression seen in
- 12 some of the in vitro studies.
- Q. So my question was: Have you seen any
- 14 studies in animals or in humans that have linked
- <sup>15</sup> specific enzymes that Dr. Saed has evaluated in
- <sup>16</sup> his cell studies to the development of ovarian
- <sup>17</sup> cancer?
- MR. ROTMAN: Objection.
- Q. Are you relying, then, on epidemiologic
- <sup>20</sup> studies looking at NSAID and aspirin use?
- MR. ROTMAN: Objection.
- A. I'm saying that the NSAID and aspirin
- 23 use is another piece of information that -- as to
- <sup>24</sup> plausibility, mechanism -- and mechanism of
- <sup>25</sup> regulation of pathways that can result in
  - Page 155
- $^{\, 1} \,$  reactive oxygen species and cause an inflammatory
- <sup>2</sup> response.
- 3 MR. KLATT: Objection. Nonresponsive.
- 4 MS. AHERN: Same.
- <sup>5</sup> Q. Let's go back to that. We'll finish up <sup>6</sup> this Exhibit 11.
- What was the next page, if any, the last
- 8 page in your photocopy?
- 9 A. Okay. So this is Page 1216 of the
- 10 fourth edition, if I am correct. Give me one
- 11 second while I find it.
- Okay. So the reason why Page 1216 is there
- 13 is because it starts the section on ovarian
- <sup>14</sup> cancer, which then continues on to Page 1217.
- <sup>15</sup> And it says -- the last paragraph on Page 1217
- <sup>16</sup> says, "Other suggested factors affecting ovarian
- <sup>17</sup> cancer risk include talc exposure, a history of
- 18 mumps infection, and alcohol consumption. Talc
- <sup>19</sup> exposure, which has been related to an excess
- <sup>20</sup> risk of ovarian cancer in a number of
- 21 case-control studies, is of interest biologically
- 22 in that ovarian cancer is thought to arise from
- 23 the mesothelium that lines the peritoneal
- 24 cavity."

25

MR. ROTMAN: Slow it down so she can

- <sup>1</sup> get it.
- <sup>2</sup> THE WITNESS: Oh, I'm sorry.
- A. "Ovarian cancer may be analogous,
- <sup>4</sup> therefore, to plural mesothelioma, which has been
- <sup>5</sup> shown to be caused by asbestos, a chemical
- 6 similar to talc."
- Q. Is that the complete passage that
- 8 you're looking at?
- A. I believe that is why I had highlighted
- 0 that one, yes.

13

18

- Q. You'd agree that this version of
- 12 Blaustein's textbook was published in 1994?
  - A. Yes, I am aware.
  - 4 Q. Would you agree that a number of the
- 15 risk factors that have been identified here,
- there have been additional studies published on?
- <sup>17</sup> A. Yes.
  - Q. Would you agree that alcohol is a known
- <sup>9</sup> risk factor these days for ovarian cancer?
- A. I don't think that's been borne out to
- <sup>21</sup> be the case. But with talc, there's continued to
- <sup>22</sup> be several case controls and meta-analyses which
- 23 have continued to be consistent with the
- <sup>24</sup> increased risk of ovarian cancer cited in the
- 25 studies that were cited here, which I didn't
  - Page 157

Page 156

- <sup>1</sup> actually Xerox. You have the book, so --
- Yes, I agree this was 1994, but taken into
- <sup>3</sup> context of the subsequent studies and literature
- <sup>4</sup> looking at talc and ovarian cancer, I think it's
- <sup>5</sup> still relevant.
- 6 Q. Have there been a number of updates and
- <sup>7</sup> changes to the classification of tumors since
- 8 1994?

13

- <sup>9</sup> A. Since 1994, sort of semantically. We
- 10 still have the same subtypes of ovarian cancer.
- 11 There's been a new categorization. We talked
- <sup>12</sup> about the Type 1 and Type 2 ovarian cancers.
  - So not a complete overhaul in
- categorization; I think just different ways to
- <sup>15</sup> category the same entities, let's --
  - O. Has the --
- A. -- put it that way.
- <sup>18</sup> O. Sorry.
- 19 Has the understanding of the origin of
- ovarian tumors evolved significantly since 1994?
- A. So this mentions -- we talked about
- this a little bit earlier -- this does mention
- that at this time, in 1994, there was thought
- <sup>24</sup> that ovarian cancer might arise from the
- <sup>5</sup> mesothelium. So the ovary is covered by a layer

Page 160 Page 158 <sup>1</sup> of mesothelium. That's the outer layer. And so 1 page just because it was a continuation of that. <sup>2</sup> in 1994, that was still, I would say -- this is <sup>2</sup> So, yes, I think we're done with the fourth <sup>3</sup> before my residency, a little before my time --<sup>3</sup> edition. 4 that that was the most common thought, that Sorry. I'm starting to talk fast because <sup>5</sup> that's where the ovarian cancer -- cancers are <sup>5</sup> I'm excited for lunch. MS. AHERN: We can take a break for <sup>6</sup> arising from. Now, since then we've discussed <sup>7</sup> some of the other more recent findings of the lunch, then. THE VIDEOGRAPHER: Here ends Media 3. <sup>8</sup> etiology. 9 But, anyway, I just -- I had read this a Off the record, 1:05 p.m. (Lunch recess was taken.) 10 couple of days ago and, you know, it was -- it <sup>11</sup> was a reference that I think is still relevant 11 ("Blaustein's Pathology of the 12 Female Genital Tract," Fifth Edition, 12 because of the -- the subsequent case controls 13 marked Exhibit 12.) <sup>13</sup> and meta-analyses that were done since then that 14 14 I think still make it relevant, although, again, (Excerpt of Blaustein's 15 <sup>15</sup> I -- we're not -- we're still not absolutely sure Pathology of the Female Genital Tract," <sup>16</sup> where all of these ovarian epithelial tumors are 16 Fifth Edition marked Exhibit 13.) <sup>17</sup> arising from. But we have a little more evidence 17 THE VIDEOGRAPHER: Here begins Media <sup>18</sup> than we did in 1994. No. 4 in today's deposition of Sarah Kane, M.D. 19 Q. And in 1994, the first prospective Back on the record, 1:45 p.m. 20 cohort study had not yet been published; correct? BY MS. AHERN: 21 A. I believe that is correct. O. Okay. Hi, Dr. Kane. 22 O. So we would be -- these numbers here 22 A. Hello. 23 23 in -- that are discussed for talc exposure would Q. I'm looking here at Blaustein's <sup>24</sup> be, essentially, just the retrospective case <sup>24</sup> Pathology of the Female Genital Tract, Fifth <sup>25</sup> Edition, which you brought with you here today. <sup>25</sup> controls that had been published up to that point Page 159 Page 161 <sup>1</sup> I marked it as Exhibit 12 to your deposition. <sup>1</sup> or the specific ones --<sup>2</sup> You can have it back. A. Yeah. You have the reference list of <sup>3</sup> the reference numbers 47, 69, 70, and 182. A. Okay. Q. Thank you. And inside, you brought O. Cramer? You said 59? 5 <sup>5</sup> with you a photocopy of the cover page and also A. 69. 6 O. Harlow, 92. <sup>6</sup> Page 629. I'll hand that back to you. I think 7 <sup>7</sup> there's only one copy. I've marked that as A. 70. 8 <sup>8</sup> Exhibit 13. Q. 70. Hartge. 9 9 And 83. A. Oh, okay. 10 A. And 182. 10 Q. Here you go. 11 11 Q. And Whittemore, 1988. A. Okay. 12 A. So, yes, that was before. They only 12 MR. TISI: What was the page? I'm 13 looked up until 1988. sorry. 14 Q. Okay. THE WITNESS: 629. Do you want the 15 MR. ROTMAN: Hunter, a good time to textbook back? 16 take our lunch break? It's been an hour since Q. Whichever one you'd rather actually pass back to me. Thank you. 17 our last -- since we started. 18 Can you tell us, on Page 629, what MS. AHERN: Sure. I'm sure people information you thought was relevant to your could use a bio break too.

Q. Are these the only pages that you photocopied from this book -- or in -- sorry.

Let me rephrase that.

Have we finished

25

Have we finished with the photocopy of Exhibit 11 or are there more pages?

A. I think -- I think I Xeroxed this last

review of the talc issue?
A. Yes. I believe this is under "Foreign"

22 Body." So this is diseases of the fallopian

tube. So under "Foreign Body" -- hold on one
 second. Okay. It says, "Foreign material may be

25 introduced into the tube in the course of

<sup>1</sup> gynecologic investigation, especially

- <sup>2</sup> hysteroscopic -- I can't say the word,
- <sup>3</sup> hysterosalpingo -- anyway, HPG, lubricant jelly,
- <sup>4</sup> mineral oil and starch and talc powder may cause
- <sup>5</sup> a lipoid or granulomatous salpingitis. An
- 6 intense phagocytic reaction to introduce lipid
- 7 material causes" --
- THE COURT REPORTER: Excuse me.
- <sup>9</sup> A. Sorry. I think that's basically the -- <sup>10</sup> that is the end.
- No. At the very end of the page, it says,
- 12 "Talc may cause mucosal or serosal granulomas.
- 13 Examination of all granulomas or foreign body
- <sup>14</sup> reactions under polarized light is useful in the
- 15 recognition of these processes. Other disease
- <sup>16</sup> processes in the tube such as leprosy or
- <sup>17</sup> amyloidosis are so infrequent that they are of
- 18 little clinical or pathologic significance."
- Q. How does that information inform your opinions today?
- A. So it's just another -- again, similar
- 22 to the other things that we reviewed in the other
- <sup>23</sup> edition, just another piece of evidence that talc
- <sup>24</sup> causes mucosal and serosal granulomas, and
- 25 they're talking about the fallopian tube in this
  - Page 163

- <sup>1</sup> chapter.
- MR. KLATT: Can I interrupt?
- 3 (Discussion off the record.)
- 4 MR. LOCKE: I'm on right now. Thanks,
- <sup>5</sup> Mike.
- <sup>6</sup> BY MS. AHERN:
- Q. And, Doctor, did you review any other
- 8 sections of Exhibit 12, Blaustein, Fifth Edition?
- 9 A. I believe I did. I think in this
- 10 edition, from what I recall, that was the -- the
- 11 reference was in the fallopian tube.
- Q. Is that what we just discussed on
- <sup>13</sup> Page 629?
- A. Yes. 629 was where talc was discussed
- 15 in the fallopian tube.
- Q. Did you see any other information in
- <sup>17</sup> any of the Blaustein texts that we reviewed today
- 18 that suggests that foreign body granulomas caused
- 19 by talc have been associated with the development
- <sup>20</sup> of ovarian cancer?
- A. Well, we saw mention of the
- <sup>22</sup> epidemiologic studies in the fourth edition that
- <sup>23</sup> we reviewed.
- Q. So other than the epidemiology, is
- 25 there any reference to pathology studies or

- <sup>1</sup> experimental studies or animal studies
- <sup>2</sup> linking talc foreign-body responses to
- <sup>3</sup> development of cancer?
  - A. From what I can recall in those
- <sup>5</sup> textbooks, I don't think they went into any more
- <sup>6</sup> detail than what I've read for you.
- Q. Okay. What else did you bring with you
- 8 today? Anything that we haven't covered other
- <sup>9</sup> than the boxes behind me?
- A. Correct. I don't think so. Mr. Rotman
- <sup>11</sup> brought a copy of my report, but that is all.
- <sup>12</sup> This -- let me look.
- All of these have been marked already.
- <sup>14</sup> Yeah.

19

21

24

- Q. All right. Doctor, you've got a copy,
- but I'm going to hand you another one. I've
- marked as Exhibit 14 a copy of your expert report
  - 8 dated November 15, 2018.
  - (Rule 26 Expert Report of Sarah
- E. Kane, M.D. marked Exhibit 14.)
  - Q. Can you review Exhibit 14 and tell us
- <sup>22</sup> if this is indeed your expert report dated
- <sup>23</sup> November 15, 2018?
  - A. Yes. This appears to be my report.
- Q. And you brought with you earlier an
  - Page 165

Page 164

- <sup>1</sup> updated copy of your CV; correct?
- A. Yes, I did.
- O. Which we marked Exhibit 2.
- (Document entitled "References
- <sup>5</sup> Cited and Other Material and Data
- 6 Considered" marked Exhibit 15.)
- <sup>7</sup> BY MS. AHERN:
- Q. And Exhibit B to your report was
- <sup>9</sup> entitled "References Cited and Other Material and
- <sup>10</sup> Data Considered." I've marked that as Exhibit 15
- <sup>11</sup> to your deposition.
- 12 A. Okay.

- Q. Okay. And Exhibit 15 isn't paginated
- but consists of 11 pages. The first ten pages of
- <sup>15</sup> materials consist of 186 items identified by the
- indications consist of 100 feeting identified by the
- caption on the top of Page 1 as "Literature"; is
- <sup>7</sup> that correct?
- 18 A. I'm sorry. Are you talking about the
  - <sup>9</sup> "References Cited and Other Material and Data
- <sup>20</sup> Considered," Exhibit 15?
- 21 Q. Yes.
- A. Yes. There is a list of 186 literature
- <sup>23</sup> references.
- Q. And the materials listed on Page 11 are
- <sup>25</sup> identified by a caption as "Other Sources" and

- <sup>1</sup> include an additional 17 items; is that correct?
- A. Yes.
- 3 Q. Okay. So did you prepare Exhibit 15?
- 4 A. Yes. I did.
- 5 Q. Did you type this out yourself?
- 6 A. I did. Yes.
- Q. Okay. And how did you go about pulling this together?
- 9 A. I'm -- in what way?
- 10 Q. Did you keep a running list of the
- 11 citations as you went and then pull this all
- 12 together at the end of your report?
- A. Yes. So what happened is this was my
- 14 first medical expert witness report I have
- <sup>15</sup> written. And you'll notice that -- let's see,
- <sup>16</sup> all of the -- oh, I'm sorry. This doesn't
- <sup>17</sup> include the January 4th list; right?
- O. We'll get there.
- 19 A. Okay. So that's what I kind of want to
- <sup>20</sup> explain. What happened is, the reason why you
- <sup>21</sup> had a January 4th list, is because I wrote
- 22 this -- the accepted form for published
- 23 literature is listing literature that you've
- <sup>24</sup> actually cited within the body of your report,
- <sup>25</sup> and so it was my misunderstanding. I was not
  - Page 167
- <sup>1</sup> aware at first that you guys were going to want a
- <sup>2</sup> list of everything that I had reviewed.
- So what I tried to do is this, I think, was
- <sup>4</sup> turned in at the same time, so Exhibit 15 was
- <sup>5</sup> turned in at the same time as Exhibit 14, and it
- <sup>6</sup> has the literature that was cited within the body
- <sup>7</sup> of the report.
- And then when I realized I needed to get a
- <sup>9</sup> list together of everything, as complete a list
- 10 of everything that I thought I reviewed, I put
- 11 together the January 4th list, which was -- I had
- 12 to sort of recreate -- and I kept almost all of
- 13 those -- all of this literature in different
- 14 files.
- 15 I had to do a little bit of recreation
- <sup>16</sup> because, as I mentioned before, I lost a couple
- of hard drives during this whole process, which
- 18 was not fun. But thankfully, I was -- I had
- 19 backed up a lot of it.
- So I tried to be as complete as possible.
- 21 It is possible that there are a few things I
- <sup>22</sup> reviewed that did not make the list, which I
- <sup>23</sup> think I realized on the list that you got
- <sup>24</sup> yesterday there might have been a couple that I
- <sup>25</sup> had reviewed before, but most of that literature

Page 168

Page 169

- <sup>1</sup> that you -- the list that you got yesterday is
- <sup>2</sup> stuff that I had reviewed, I believe. I have to
- <sup>3</sup> look at it.
- But my point is that list that you got
- yesterday was varied, and -- when I looked at it,
- and it was just an effort to be as complete as
- possible.
- Q. Okay. And just looking -- we'll get
- there, but just looking at Exhibit 15, which --
- the first ten pages, which are the references?
  - A. Mm-hmm.
- 12 Q. So do you define the references as the
- specific sources that you cited within the body of your report?
- 15 A. These are sources that I cited within
- the body of my report. 17 Q. And are these the sources that you rely
- on to support the opinions expressed in your
- 19 report?

11

- 20 A. So these are some of the references
- <sup>21</sup> that I used. Again, I also had reviewed the
- subsequent -- the literature and the other data
- in the subsequent lists. So I would not say this
- <sup>24</sup> is all-encompassing, but ultimately, with all the
- 25 lists you have now, I'm hoping that that is
- - <sup>1</sup> encompassing of at least all of the stuff that I
    - <sup>2</sup> considered. I wouldn't necessarily say "rely
    - <sup>3</sup> on," but at least everything that I considered.
    - Q. Okay. And that was -- my next question
    - <sup>5</sup> was: Do you differentiate between the sources
    - <sup>6</sup> cited here as references and those that you just
    - considered but weren't included as references?
    - A. Not necessarily. These are the ones
    - that ended up getting cited in the report. Now,
    - there were different drafts, which at one point
    - some of the other ones were cited, and there was

    - a little bit of changing it around, which there's
    - a couple -- I think there are a couple of
    - typographical-type errors in a couple of the
    - <sup>15</sup> references because of that.

- 16 But essentially, there isn't that much of a
- difference, I would say, except to say that this
- is the literature that I ended up specifically 19 citing.
- 20 But all of the literature that I looked at, <sup>21</sup> I considered.
  - Q. Would you say that all of the
- literature that you looked at, which would
- include your other sources here on Exhibit 15,
- your January 4, 2018, reference list, and the

<sup>1</sup> ones served yesterday, January 24th, would you <sup>2</sup> say that you relied on all of those materials?

A. No. Well, I at least reviewed those. <sup>4</sup> I would say that I considered them. I wouldn't

<sup>5</sup> necessarily say that I relied upon them.

Q. And when you consider material, what does that mean to you?

A. Well, you know, when I'm -- you can <sup>9</sup> look at my methodology, how I tried to cast as wide a net as possible with the information that <sup>11</sup> I gathered in the information stage. So I wanted

12 to have as much data, as many literature 13 references, expert reports, whatever I could kind 14 of get my hands on that might be relevant to my

<sup>15</sup> general causation report.

16 And then I'm reading through those, and <sup>17</sup> that's actually when I started my draft of the <sup>18</sup> report. It really started as sort of notes that <sup>19</sup> I took as I read the different literature <sup>20</sup> references, and I sort of built out from there.

Does that answer your question?

22 Q. I think probably so.

23 Did you collect -- did you identify all of <sup>24</sup> the materials in Exhibit 15 yourself, or were

some of these provided to you by the plaintiffs'

Page 172 <sup>1</sup> remember, I did my own literature search, read as

<sup>2</sup> much as possible, started taking my own notes.

<sup>3</sup> And then thought, as I was sort of forming my

4 opinion, thought, you know, it would be nice to

<sup>5</sup> know what the defense is saying. And, of course,

<sup>6</sup> I think at that point is when I asked, but I

don't remember specific timing.

Q. And did you specifically -- did you ask for specific defense reports or specific defense

reports related to particular expertise?

A. If I recall -- I'm looking at this 12 list -- I believe the first request was a more

general request.

Q. When you say "more general," do you mean for --

16 A. Meaning --

17 Q. -- for defense?

A. -- I didn't ask for specific names of

19 people.

18

23

20 Q. Ah.

21 A. I think at this point, I wasn't

necessarily aware of who would have been defense

experts. And so I don't remember exactly, but my

inclination is that I had asked for a more

general sort of representation.

Page 171

1 counsel?

25

A. The vast majority of them, I found <sup>3</sup> through my own literature search. Some of them

4 may have been supplied by the plaintiffs'

<sup>5</sup> attorneys. A lot of those overlapped with what I

6 had already found; the exception, of course,

<sup>7</sup> being documents on the other sources that I would

not have had access to on my own.

So I had asked for, and in forming my 10 opinion, my general causation opinion, I had 11 asked for defense expert reports so I could get a 12 sense of what the defense experts' opinions were, 13 just to get, you know, the other -- just to get <sup>14</sup> more information.

15 So that's -- so those were definitely given

<sup>16</sup> to me by plaintiffs' attorneys. 17 Q. Do you remember, timewise, did you

18 review the defense expert reports and the 19 materials in the other sources earlier on to get

<sup>20</sup> a sense of the issues in the litigation and then

<sup>21</sup> do your literature search, or the other way <sup>22</sup> around? What was the timing?

A. I don't remember exactly. I don't 23 <sup>24</sup> believe I read the -- I'm trying to think timing.

I think what I did is -- from what I

Page 173

Q. And can you identify on here which of <sup>2</sup> the other sources are from defense experts?

A. Yes. I'll try my best.

The Michael Ober expert report was provided

<sup>5</sup> by plaintiffs' counsel. The deposition of Alice

<sup>6</sup> Blount was also provided by plaintiffs' counsel.

Both of the Chodosh, his report and his trial

testimony, was provided by plaintiffs' counsel.

Samuel Cohen was provided by plaintiffs' counsel.

And also -- also, let's see, the Cramer, I

wouldn't have access to the Cramer reports on the

Byrd and Jacqueline Fox. The expert report of

13 Michael Crowley was given to me. That,

obviously, is a plaintiffs' report that was

within a day or two of turning in my report.

That was very late in the process.

John Godleski, I might have asked for by

name. Of course, he's a plaintiffs' expert.

His, I may have asked for by name because of the Cramer papers.

Q. Did you say Cramer was a plaintiff or <sup>22</sup> defense expert?

A. Cramer, I believe, was a plaintiff.

24 Q. I wasn't sure. You named him after the <sup>25</sup> defense experts. I'm sorry. I'm just going

- <sup>1</sup> through the list.
- MR. ROTMAN: The list is alphabetical,
- <sup>3</sup> so she's going down the list.
- <sup>4</sup> BY MS. AHERN:
- Q. Yeah. My question was: Which ones are
- <sup>6</sup> the defense experts?
- A. I'm sorry.
- Q. If you're done, you're done. Are there any other defense experts.
- A. Well, the John Hopkins and Julie Pier, 11 those exhibits and depositions I got from plaintiffs' counsel.
- 13 I believe that is it, looking at the list of 14 defense reports.
- 15 Q. Did you want to know what the defense experts had to say about epidemiology?
- A. I wanted -- yeah. I wanted as much 18 evidence as I could get, so --
- 19 Q. Were you aware that the defendants had <sup>20</sup> designated epidemiologists in the litigation who <sup>21</sup> had given reports and testimony?
- 22 A. I don't know if I was aware
- specifically of that.
- Q. Were you aware that the defense had <sup>25</sup> designated a number of gynecologic pathologists

- <sup>1</sup> ones that I received. Yes.
  - Q. Is there anyone on this list that's --
  - <sup>3</sup> that specifically addresses gynecologic
  - pathology?
  - A. I think it's been a long time since I
  - <sup>6</sup> read those reports, but I do remember some of

Page 176

Page 177

- <sup>7</sup> those reports speaking to -- your question was on
- top. I'm just making sure.
  - Q. Sure.
- 10 A. Some -- so the gyn onc report
- <sup>11</sup> definitely went into some gynecologic pathology.
- 12 Gyn oncs are generally knowledgeable about gyn
- pathology because we work pretty closely with
- 14 them. We often show our gyn pathology, for
- <sup>15</sup> example, at multiconferences, multidisciplinary conferences.
- 17 So I vaguely remember a gyn onc one going over some gyn path stuff, but my memory is vague
- because I have not read these in probably over a
- year. I don't know exactly.
- 21 Q. Would you be interested in what the <sup>22</sup> epidemiologists that had served reports and given
- testimony in the litigation the last five years,
- what they've said?
  - MR. ROTMAN: Objection.

Page 175

<sup>1</sup> who had given reports and testimony as well?

- A. Again, I don't know if I was
- specifically aware of that. No.
- Q. Would you have, as a pathologist doing
- <sup>5</sup> an expert report on this litigation, would you
- <sup>6</sup> have been interested to know what the defense pathologists had said?
- 8 A. Well, I will take any data that I can get to try to see if it's relevant. I mean, so I
- <sup>10</sup> had asked for defense reports, and that's what I <sup>11</sup> got.
- 12
- Q. These reports, these other sources, the 13 17 items here were in response to your request, but they were chosen by the plaintiffs' counsel?
- 15 MR. ROTMAN: Objection.
- 16 A. I'm not sure how they were chosen or how -- why -- all I know is that I asked for reports, and this is what I received.
- 19 Q. And you specifically asked for defense <sup>20</sup> reports; right?
- A. I did.

25

- 22 Q. And you got Michael Beer, who is an <sup>23</sup> oncologist; Lewis Chodosh, a cancer biologist;
- and Sam Cohen, a toxicologist; correct?
  - A. That would appear, from the list, the

A. Again, I'll take whatever information

- <sup>2</sup> or data, you know, I can get that might be
- <sup>3</sup> relevant.
- Q. And do you consider expert litigation
- reports to be data?
- A. Yes. I think it's data. Q. Okay. Is it the kind of data you rely
- on in your everyday practice as a pathologist?
- A. I sort of view they're opinion reports.
- 10 They're opinion, general causation opinions, and
- <sup>11</sup> a couple of these are -- I can't remember. All
- 12 of these were general, I believe, from the <sup>13</sup> defense.
- So they're professional opinion data, and I
- would say that's similar to having a consultation with a colleague or a peer. I mean, you know, in
- my day-to-day practice, I'm certainly asking
- opinions of colleagues and different specialties
- <sup>19</sup> or my own specialty, even. Those are
- professional judgments, professional opinions,
- 21 looking at their knowledge of the literature or 22 data.
- 23 So I think it's a good analogy; looking at
- general causation, professional opinions, is
- <sup>25</sup> similar to kind of getting a colleague's opinion.

Q. But this is the first time you've relied on litigation reports to inform your own opinions; correct?

A. Well, again, I don't know if I would use the word "rely." I certainly considered them, you know. But, again, I think it's very similar to asking a colleague in my daily practice for an opinion on something.

<sup>9</sup> Q. And, Doctor, looking at 186 references <sup>10</sup> that are cited in Exhibit 15.

Did you review each one of these carefully and thoroughly?

A. I reviewed each one of them, some of them probably more thoroughly than others, depending on what I was looking for; but yes, I reviewed all of them.

Q. And do you know whether or not the boxes, the four boxes that are sitting behind me, do those include these 186 references on Exhibit 15?

MR. TISI: Let me see if I can help you out.

MS. AHERN: Sure. Go ahead.

MR. TISI: My understanding is they do.

MS. AHERN: That's the 186?

Page 179

MR. TISI: That would be the references in the report. It would not be, to my -- I

<sup>3</sup> haven't cracked the boxes, so I can only assume

<sup>4</sup> from past prologue that the information

considered is not in those boxes. They may be,
 but the information relied on that is cited in

7 the report are.

MS. AHERN: Okay. So other sources
here that are not cited specifically, well, they
may be -
MR. TISI: I don't know for example --

MR. TISI: I don't know, for example -well, maybe we can open them up. But I don't
know, for example, if the expert reports and
depositions are in the -- in there. If they're
cited, then they're probably in there. If
they're not cited --

THE WITNESS: I'm not sure because -
18 I'm not sure I cited these in my report because

19 they weren't necessarily reliance. It was more

20 data.

But I thought at the time that I should list what -- because these aren't publicly -- I don't believe any of these are publicly

available, what is on this list, so I felt like I
 should list them.

Page 180
But I don't believe I -- well, I might

But I don't believe I -- well, I might have referenced the Longo.

<sup>3</sup> BY MS. AHERN:

Q. Page 5. I think if you look at Page 5 of your report, you reference Dr. Blount --

6 A. Yes.

Q. -- Dr. Crowley, Longo, Rigler,

8 Hopkins --

A. Yes.

<sup>10</sup> Q. -- Pier?

A. Yes. Looking back at the list, you're absolutely correct. I did.

Q. Do you think, as you sit here, that those are --

MR. TISI: I can look at them if it makes your life easier. I'm happy to do it.

But I do think -- Mike is back there looking. I'm thinking that those are the actual, relied-on referenced materials, not the materials considered, which was a separate list.

MS. AHERN: That's the January 4th, and we're going to get to that one.

MR. TISI: No. it's in the back of the report. Maybe I'm wrong.

MS. AHERN: There are other sources,

Page 181

<sup>1</sup> but she has apparently relied on them --

MR. TISI: That's fine.

3 MS. AHERN: -- to some extent in

<sup>4</sup> performing reviews about fragrances and asbestos.

<sup>5</sup> BY MS. AHERN:

Q. Is that right, Doctor?

A. Dr. Crowley's report and Dr. Longo's

<sup>8</sup> report, yes. I --

9 Q. And what about Dr. Hopkins and Pier?

A. Yes. I don't believe I read their

<sup>11</sup> entire depositions. I know I had seen the

12 exhibits from the depositions, and I think

<sup>-3</sup> part -- I listed it here, so I must have at some

14 point.

MS. AHERN: Okay. So let's put 15 over here, and let's move on to the next one.

17 (Document entitled "Additional

<sup>18</sup> Material Considered" marked Exhibit 16.)

<sup>9</sup> BY MS. AHERN:

Q. Okay. Doctor, I'm handing you what's been marked as Exhibit 16 to your deposition.

Can you take a look at Exhibit 16 and tell

23 us what that is?

A. Yes. So this is a combination. So once I realized that I needed to give you all a

Page 182

list of -- as complete a list as I could -- I'm

- <sup>2</sup> not going to say this is a complete list -- and,
- <sup>3</sup> of course, you have another list that you just
- <sup>4</sup> got, but I tried to be as complete as I could in
- <sup>5</sup> recreating the literature and other reports that
- <sup>6</sup> I had considered.
- <sup>7</sup> So these are ones that, to my recollection,
- 8 I didn't specifically cite or were not
- <sup>9</sup> available -- I mean, obviously, I have some of
- 10 the plaintiffs' expert reports that weren't
- <sup>11</sup> available to me until after I had written and
- 12 submitted my report. So some of these were
- <sup>13</sup> available to me only after -- and the Health
- <sup>14</sup> Canada came out after my report.
- So these are a combination of things I
- <sup>16</sup> reviewed subsequent to November 15th and stuff
- <sup>17</sup> that I had reviewed prior to that but had not
- 18 specifically cited and recreated the list.
- Q. Okay. And just for the record, this
- <sup>20</sup> is -- Exhibit 16 is a four-page document. It's
- 21 not paginated, but it has 96 items identified as
- <sup>22</sup> "Additional Materials Considered," so -- served
- <sup>23</sup> on January 4, 2018.
- <sup>24</sup> Can you identify, as you look through these
- 25 items on Exhibit 16, which of those you reviewed

A. No.

Q. And are there some materials on

Page 184

Page 185

- <sup>3</sup> Exhibit 16 that were provided to you or
- <sup>4</sup> identified for you by the plaintiffs other
- <sup>5</sup> than -- and I'm not talking about the litigation
- <sup>6</sup> materials, but the articles?
- A. Again, there might have been some that
   overlapped with what I had already found. I'm
- <sup>9</sup> looking.

I believe the April 2014 FDA letter may -although that might have been available on the
internet. I might have come across that on my
own first.

No. I believe the vast majority of this

15 stuff was stuff that I -- other than those

<sup>16</sup> reports was stuff that I had independently

<sup>17</sup> already found. That's the only one that is

18 ringing a bell as a possibility, but I also seem

<sup>19</sup> to remember finding it on the internet.

Q. Okay. And are any of these materials, materials that you explicitly rely on or, excuse

<sup>22</sup> me, are any of the materials on Exhibit 16

<sup>23</sup> materials that you rely on to support your

4 opinions?

A. Again, it's all data that I considered.

Page 183

- $^{1}\,$  prior to the submission of your report and which
- <sup>2</sup> ones you reviewed after?
- A. I can do the best that I can. My
- <sup>4</sup> memory might be a little -- and I have to jog my
- <sup>5</sup> memory a little bit on some of them.
- 6 Clearly, the expert reports that were
- <sup>7</sup> dated -- the plaintiff expert reports that were
- 8 dated after my report, I had not seen --
- <sup>9</sup> Q. Mm-hmm.
- <sup>10</sup> A. -- prior.
- And, again, the Health Canada came out
- <sup>12</sup> afterwards, so that was not available when I
- 13 submitted my report. The majority of the rest of
- 14 the literature, I had read prior to submitting my
- 15 report.
- Q. Okay. Had you seen any draft reports from any of the other experts designated by the
- <sup>18</sup> plaintiffs in this litigation?
- A. Not before my report. I didn't see any
- drafts. I only saw the final reports after myreport was submitted.
- Q. Okay. Did you have an opportunity to
- 23 talk with any of the other experts that were
- designated by plaintiffs prior to your reportbeing submitted?

- ich 1 I didn't specifically cite them, but there's
  - <sup>2</sup> certainly pieces of information that helped me
  - <sup>3</sup> come to my conclusion.
  - Q. And you prepared Exhibit 16, didn'tyou?
  - A. Yes.
  - <sup>7</sup> Q. And do you remember when you prepared
  - 8 it?

- <sup>9</sup> A. Very shortly before you received it.
- 10 So it would have been -- you received it
- 11 January 4th?
  - Q. Mm-hmm.
- <sup>3</sup> A. I think I -- it was only -- I don't
- 14 remember exactly, but it wasn't very long before
- 15 that that I put it all together, after
- <sup>16</sup> recreating -- trying to recreate as best I could
- <sup>17</sup> the list of literature that I had reviewed.
- Q. And did you carefully and completely
- review all of the information in Exhibit 16?
   A. Again, I reviewed all of it. Some of
- it was more relevant than others, likely, so --
- Q. Okay. Obviously, anything that you
- received after your report is information you
- would not have relied on to form your opinions in

<sup>1</sup> this case; correct?

- A. No. It's more information for my -- my opinion hasn't changed since I wrote my report.
- <sup>4</sup> In fact, I know we've talked about Health Canada
- <sup>5</sup> a little bit, but that was pretty interesting to
- <sup>6</sup> see that report because their methodology was
- <sup>7</sup> very similar to mine, and they did a Bradford
- <sup>8</sup> Hill analysis, and they looked at a lot of the
- <sup>9</sup> same literature and came to the same conclusion.
- So that definitely was supportive evidence,
- I think -- not I think; it is -- of my opinion.
   Q. And, Doctor, I only have one copy of
- 13 this. It's "Additional Materials to Sarah Kane"
- <sup>14</sup> that were served last night or yesterday
- <sup>15</sup> afternoon, January 24th.
- 16 (Document entitled "Additional
- Materials to Dr. Sarah Kane" marked Exhibit
- <sup>18</sup> 17.)
- <sup>19</sup> BY MS. AHERN:
- Q. First of all, can you take a look at
- 21 that?
- Have you seen it before?
- A. Yes. Yes. I have.
- Q. Did you prepare that?
- A. I did. I had listed -- there are a

- I think that covers most of them.
- Q. What about the EFSA guidance on the use

Page 188

Page 189

- <sup>3</sup> of weight of evidence?
  - A. Oh, yeah. That, I think, I reviewed
- <sup>5</sup> after I had submitted my report.
- 6 Q. Did that form part of the basis of your
- <sup>7</sup> opinions or your methodology?
- A. It was more of a -- it basically shows
- <sup>9</sup> that the methodology that I used is very similar
- to evidence-based medicine that we would use on a
- 11 daily basis. It kind of went through weight of
- <sup>12</sup> evidence, and it was sort of helpful to see the
- similarity of the methodology that I used coming
- 14 to my conclusion.
- Q. Was the methodology you used for
- preparing your opinions in this case and your
- 17 report in this case taken directly from the EFSA
- 18 guidance?
- <sup>19</sup> A. No. I think I just -- I saw this EFSA
- <sup>20</sup> guidance after writing my report.
- Q. Did you use any other sort of published
- <sup>22</sup> methodology on weight of the evidence when you
- <sup>23</sup> prepared your opinions?
- A. I used what we have been trained to
- use. I mean, it's evidence. It's an

Page 187

- <sup>1</sup> couple of papers that I realize I had read
- <sup>2</sup> previously and didn't -- I can tell you Purdie,
- <sup>3</sup> 1995, Keskin, 2009, I definitely reviewed while
- <sup>4</sup> preparing my report, and somehow those got off
- <sup>5</sup> the list.
- 6 The other ones, Taher wasn't available. I'm
- <sup>7</sup> trying to remember Gordon, if I had seen that.
- 8 If I had seen that before I submitted a report,
- <sup>9</sup> it was very late. It might have been after.
- The IARC heavy metals, I believe I actually
- 11 cited that in my reference list, but I was trying
- 12 to be -- it was one of these last-minute, trying
- 13 to be as complete as possible, so that actually
- 14 might be a repeat.
- The website, I had reviewed prior to turning
- <sup>16</sup> in my report. And the Longo supplemental report,
- <sup>17</sup> obviously, wasn't available until January. Same
- 10 total 1 to TEL 111
- <sup>18</sup> with the depositions. Those weren't available
- <sup>19</sup> until after they were done.
- The Kurman defense report, I asked for
- <sup>21</sup> recently when I realized that Kurman was a
- 22 listed -- a named expert witness, which is also
- <sup>23</sup> why I went through my copies of my old textbooks
- <sup>24</sup> and my partner's old textbooks. So that, I asked
- <sup>25</sup> for specifically.

- 1 evidence-based medicine model of methodology and
- <sup>2</sup> coming to conclusions. So it's -- I tried to do
- 3 as thorough as possible description of my
- <sup>4</sup> methodology, which we can refer to in my report
- <sup>5</sup> if you'd like.
- Q. What about the J&J Science Day
- <sup>7</sup> presentation?
- A. That --
- 9 MR. ROTMAN: Objection. Is there a 10 question?
- MS. AHERN: I'm about to get there if you'd let me finish my question.
- MR. ROTMAN: I thought you were.
- 14 Sorry.
- MS. AHERN: You might just hold off.
- <sup>16</sup> BY MS. AHERN:
- Q. What about the J&J Science Day
- $^{\mbox{\scriptsize 18}}$  presentation? Is that something that you
- 19 reviewed?

- A. I reviewed that very quickly, and I
- only received that maybe a week ago. It was veryrecently.
  - Q. Did you request that information?
- A. I think, from what I remember, it was
- <sup>25</sup> part of asking for more sort of defense side of

- <sup>1</sup> the story; what, you know, your experts might
- <sup>2</sup> have been saying; what kind of -- you know, I was
- 3 trying to figure out how somebody who had looked
- 4 at the same body of evidence that I did can come
- 5 to a different conclusion, so it was part of sort 6 of that request.
- I think I probably got it after I requested
- 8 Kurman's defense report from a prior litigation,
- if memory serves me correctly.
- 10 Q. You would agree that a very large part, 11 not just volume, but a very large part of your
- 12 report and your opinions in this case are related
- 13 to the observational epidemiology on talc and
- <sup>14</sup> ovarian cancer; is that correct?
- 15 A. Well, I think that epidemiology
- 16 literature is extremely compelling. You have
- 17 30 case-control studies over different periods of
- 18 time in different populations that have come to
- 19 the same -- same ballpark relative risk, I would
- 20 say, 1.3 to 1.4.
- 21 Now, not all of those have been
- 22 statistically significant, but some of those
- 23 studies were smaller studies, and so that tends
- 24 to decrease the power of the study and your
- 25 confidence intervals will be wider.
- Page 191
- But I thought the epi data was really
- <sup>2</sup> compelling. And often in causation, the epi data
- 3 sort of leads the way in paving a path to
- 4 figuring out causation.
- A perfect example is tobacco. You know, the
- <sup>6</sup> Surgeon General issued his report in the 1960s
- <sup>7</sup> about tobacco before they had any mechanism for
- 8 tobacco causing -- so that was a perfect example
- of the epi data leading to causation.
- 10 So it's true, a lot of the studies looking
- 11 at talcum powder products and ovarian cancer are
- 12 epidemiology studies, but they're extremely
- 13 informative in that they are very consistent in
- 14 their findings. And, again, different authors,
- 15 different populations, different countries.
- 16 And there's also the cohort. So I went
- 17 through the cohort studies. The cohort studies,
- 18 some of them showed an association with serous
- 19 invasive carcinoma, but the cohort studies didn't
- 20 tend to find, other than that, a statistically
- 21 significant increased risk, although some of them <sup>22</sup> did find increased risk.
- 23 But we can talk about cohort studies versus 24 case-control studies if you want, but I think the
- 25 difficulty with cohort studies is ovarian cancer

- Page 192
- 1 is such a rare disease, and you're sort of, you
- 2 know, rolling the dice when you enroll patients
- 3 as to whether or not they're going to end up with
- <sup>4</sup> a disease at the end that you want to study.
- So you're sort of -- and these cohorts are
- 6 also designed for multiple endpoints and multiple
- diseases. They weren't just looking, most of
- them -- I believe the sister -- well, the sister
- study -- anyway, we can pull it out if I have to,
- but my point is the cohort studies are designed
- for multiple different things, especially the
- Nurses' Health Study.
- 13 And so it's a difficult type of study to
- design with a very rare disease. And I think
- 15 that's where the case-control studies are
- 16 important because you can start with the disease
- and work backwards, and so you can have an easier
- time getting cases.
- Q. Did you find it interesting or odd that 19
- you were provided with a number of defense expert
- 21 reports, but not a single one of them related to
- 22 the epidemiology specifically from an
- epidemiologist?

24

- A. Well, you know, again, I don't pretend
- 25 to know why I was sent what I was sent. I just
- <sup>1</sup> know that I asked for reports, and I got what I

Page 193

- <sup>2</sup> got. So I have no idea what the process was in <sup>3</sup> deciding what I received; if there was even a
- 4 decision. For all I know, it's just what they
- <sup>5</sup> had readily available.
  - Sorry. What is the question?
  - Q. Well, let me ask another question.
- 7
- MR. ROTMAN: Let her finish the answer
- <sup>9</sup> because you can read -- she can go back and read 10 from the realtime what the question was and see
  - if she's done.
- 12 A. So I guess I don't know if there was
- 13 thinking -- what the thinking was or if there was any. But also I can say that the epi data -- I
- 15 knew that by that point that the epi data was
- <sup>16</sup> consistent by the time I -- I think that was the
- first literature that I was looking at, and so I
- knew that it was consistent.
- 19 So it's -- anyway, I don't really -- I don't
- know is the answer, the short answer. 21 The long answer, the short answer is I don't
- 22 know why I got what I did. I just did.
- 23 Q. Okay. And you've seen the designations <sup>24</sup> in this case from November of 2017 in which you
- <sup>25</sup> were listed formally and publicly as an expert

Page 194 Page 196 <sup>1</sup> for the MDL? Have you seen that document? 1 MR. TISI: That's fine. 2 A. I'm not sure that I have, actually. 2 MS. AHERN: Absolutely. O. Were you aware that in November of 3 I have the date as November 6, 2017. 4 2017, you were listed on a court document as an 4 MR. TISI: You are exactly -- well, it <sup>5</sup> expert for the plaintiffs in the MDL litigation? is what it is. MR. ROTMAN: Objection. MS. AHERN: Okay. Either way. 7 A. I don't know the timing or I don't BY MS. AHERN: think I saw the document, so I... Q. Okay. Doctor, if you turn to -- if you 9 turn to Page 8, the bottom of Page 8, do you see ("The Plaintiffs' Steering vour name? 10 Committee's Initial Designation and 11 Disclosure of Non-case Specific Expert 11 A. Yes. Witnesses" marked Exhibit 18.) 12 12 Q. Okay. And did you -- go ahead and 13 review the text here associated with your name 13 BY MS. AHERN: 14 Q. Okay. I'm marking Exhibit 18 to your and designation. <sup>15</sup> deposition. Do you see this document, 15 (Witness complies.) <sup>16</sup> Exhibit 18, is entitled "Plaintiff Steering 16 Q. Just let me know when you're finished. 17 Committee's Initial Designation and Disclosure of 17 A. I'm finished reading my blurb. I'm <sup>18</sup> Non-case Specific Expert Witnesses"? just looking... 19 19 A. Okav. O. Sure. 20 20 Q. And if you turn to -- first of all, A. Okay. let's see. Unfortunately, I can't find the date 21 Q. Were you aware in November of 2017 that on that, and I apologize. you had been publicly disclosed as an expert on 23 MR. TISI: It's January, if I'm not behalf of plaintiffs in the MDL? mistaken. I think it was mid-January of 2017. MR. TISI: Okay. That's -- and you do MS. AHERN: Is that what it is? kind of need to know the context in which this Page 195 Page 197 MR. TISI: Yeah. And, Counsel, since I <sup>1</sup> was done. <sup>2</sup> was involved in this process, if you don't mind MS. AHERN: I'm just asking if she was <sup>3</sup> if I place an objection here. <sup>3</sup> aware she was publicly -- she was already MS. AHERN: Sure. <sup>4</sup> retained at that point. MR. TISI: As you may not know, during MR. TISI: She was retained, but there <sup>6</sup> the status conference where this was ordered -- I <sup>6</sup> was no -- the judge was very clear when she <sup>7</sup> don't have the transcript in front of me -- it <sup>7</sup> ordered that this be done. She understood that <sup>8</sup> was intended to be an interim -- I don't know this was not a disclosure of experts. So when you ask the question "You <sup>9</sup> what the questions are going to be, but it was understand you were being identified as an expert 10 intended to be an interim disclosure to help <sup>11</sup> guide the legal process for identifying issues at that time," she would have no way of knowing 12 that would be involved in Judge Wolfson looking that because we didn't know it. 13 <sup>13</sup> at the science. MR. KLATT: Chris, you've got to limit It was never -- I don't know -- again, your objection. 15 15 not knowing what your questions are, I don't even MR. TISI: No. But it's unfair 16 think it would be intended to be used as an 16 because -expert -- as an exhibit in a deposition. 17 17 MR. KLATT: You're coaching the But, you know, whatever your questions 18 witness. You're telling her the whole story. are, we would like to reserve that because --MR. TISI: It's a true story. Why 19 20 don't we ask her to leave, and we'll put it on MS. AHERN: Sure. MR. TISI: -- this was intended to be the record. I have no problem with that. <sup>22</sup> a -- more of an informative document than 22 MR. KLATT: All right. 23 MR. TISI: We can ask her to leave, and <sup>23</sup> anything else. 24 MS. AHERN: Okay. Your objection is we can put it on the record. 25 25 noted. MR. KLATT: Let's do that.

Page 198 Page 200 1 MR. ROTMAN: Go get a cookie. MR. TISI: She was probably not, I 2 MS. AHERN: Sorry, doctor. <sup>2</sup> mean, what she was aware of when she had been 3 <sup>3</sup> retained. (Witness exited) 4 MS. AHERN: My questions on this are MS. AHERN: Did she agree to be <sup>5</sup> fairly limited to the time period that she was disclosed as an expert? retained, time period she was intending to be an MR. TISI: She agreed to be retained. She was disclosed as an expert when she reached expert, that sort of thing --MR. TISI: Yeah. her conclusions in the case. 9 MS. AHERN: -- and the subject matter And so what the Court was requiring us that she is being designated for. to do was to give us a broad brush, and she was 11 MR. TISI: Yeah. But, you see, the <sup>11</sup> very clear. I remember standing in court, and 12 she said, "Look, some of these may fall off your 12 issue in the case -- and the reason why this was 13 list. Some of these may -- we may have people <sup>13</sup> a tricky issue for the judge and -- well, I won't 14 speak for the judge, but for us when we disclosed 14 that might be added, but I want a snapshot in 15 this was because we didn't know -- we didn't have time as to what I'm dealing with in terms of" --<sup>16</sup> expert reports. We didn't even have opinions 16 MR. KLATT: We don't need to waste time <sup>17</sup> yet. on the record on this. 18 MR. TISI: We can go off the record if So this was being done in a way that said, "Okay, Judge, she wants to know, A, are you want. I just don't want to be -- use this as 20 there new and different witnesses that were going an unfair -- you know, none of your questions 21 to be designated that were different than what have been unfair up until now. 22 was designated in the state court?" But to take this document and to 23 23 suggest in some fashion -- and I don't know what MS. AHERN: I do recall this, yes. 24 MR. TISI: The second issue, she was you're going to do with it. Maybe we just need 25 to wait and see. <sup>25</sup> very clear that she understood that there was a Page 199 Page 201 <sup>1</sup> lot of discovery that needed to be done, But I think this is -- I don't think <sup>2</sup> documents to be reviewed, science that was going <sup>2</sup> anyone ever intended that this document would be <sup>3</sup> to come out. So she was pretty clear that this 3 used as an exhibit in a deposition of one of 4 was more informative than anything else. 4 these witnesses. I don't think the court And so when you ask her a question 5 intended that to be the case, just like she --6 about -- when you ask her questions, "You know <sup>6</sup> when she ordered the Tardek report --<sup>7</sup> when this document was disclosed when you were informational only. <sup>8</sup> identified as an expert," you know, it implies MR. KLATT: Are we off the record? <sup>9</sup> that she had agreed to be -- you know, what her <sup>9</sup> We're just going on here. Let's go off the <sup>10</sup> opinions actually were at that time. 10 record. She -- I can tell you that these 11 11 MR. TISI: Yeah. 12 reports were done over a period of time. So it's 12 THE VIDEOGRAPHER: Off the record, 13 misleading, and it really is an unfair thing to 13 2:38 p.m. <sup>14</sup> do to a witness because this was a court request (A recess was taken.) 15 15 having nothing to do with her opinions or her THE VIDEOGRAPHER: Back on the record, <sup>16</sup> expert report. 16 2:42 p.m. 17 17 MS. AHERN: Okay. (Witness returns) 18 MR. TISI: Do you understand where I'm 18 BY MS. AHERN: 19 coming from? Q. Okay. Doctor, I've just shown you a 20 copy of some early designations that were 20 MS. AHERN: I understand where you're 21 coming from. submitted in the talc MDL, and you saw your name 22 Here is my question to you: Did Dr. --22 listed as one of the people who was being <sup>23</sup> was Dr. Kane not aware that you were going to considered as an expert; correct? <sup>24</sup> designate her or that you had at least publicly 24 A. My name is in this document. Yes. 25 <sup>25</sup> disclosed her to the Court? Q. Okay. Is there any -- do you have any

- <sup>1</sup> issues with the description of the testimony that <sup>2</sup> you were going to offer to give?
- A. I believe that to be accurate.
- Q. Okay. And you had been working on your <sup>5</sup> report at this point since May of 2017; correct?
- A. I started in May. "Writing the report"
- <sup>7</sup> is a very loose description. What I was -- what
- 8 I started, as I mentioned before, was I started
- <sup>9</sup> to review literature. I sort of took notes. So
- <sup>10</sup> I sort of counted that as writing. So I started
- 11 that process in May.
- 12 Q. Okay. And the only thing I was going
- 13 to ask you about in this report is, as you look
- 14 through it, do you note that there are a number
- <sup>15</sup> of professional epidemiologists that have been
- 16 listed in this report on behalf of plaintiffs?
- A. I'd have to go through the list. I
- <sup>18</sup> actually, even though I did have access to
- 19 several final reports, after I had submitted my
- <sup>20</sup> report, I don't remember who was what specialty,
- <sup>21</sup> what field, for the majority of them.
- 22 Q. Well, how about this question: Of the
- 23 experts -- are you aware of which experts have
- <sup>24</sup> submitted reports on behalf of the plaintiffs?
  - A. I would need to look at the list that I

Page 204

- <sup>1</sup> asked me if I would be willing to do an extensive
- <sup>2</sup> review of the literature and decide what my
- <sup>3</sup> opinion would be on talcum powder products
- causing ovarian cancer.
- Q. Did you ask them or discuss with them
- <sup>6</sup> what your role would be in terms of your specific
- area of expertise in anatomic pathology?
- A. I did not specifically talk to them
- about that because I know that I'm a gynecologic
- pathologist, so I thought that would be my area
- where I weigh in on my opinion.
- 12 Q. And where in your report specifically
- do you address your expertise in gynecologic
- pathology, anatomic pathology?
  - A. I list it in the beginning of my
- report, I think. I talk about -- I talk about my
- background.
  - Is that what you mean?
- 19 Q. I mean more in terms of the opinions
- 20 that you're giving being informed by your
- expertise in anatomic pathology.
- A. Well, again, I'm an expert in
- gynecologic pathology, and the question is about
- a causation of ovarian cancer, so certainly that
- <sup>25</sup> falls into my area of expertise.

Page 203

- <sup>1</sup> reviewed, which I think is all of the ones that
- <sup>2</sup> were submitted, and compare it to this list.
- I mean, I know Jack Siemiatycki is an
- <sup>4</sup> epidemiologist, off the top of my head.
- <sup>5</sup> Dr. Singh, I believe, is an epidemiologist.
- But without going through the list and sort
- <sup>7</sup> of jogging my memory as to the reports, I skimmed
- a lot of these reports.
- Q. Okay. And I guess the point is: Are
- you aware, as we sit here today, that the
- 11 plaintiffs have designated a number of
- <sup>12</sup> epidemiologists in this MDL litigation who have
- 13 given reports and/or testimony at this point on
- 14 the topic of epidemiology, talc and ovarian
- 15 cancer?

16

25

- A. I am aware that they have
- epidemiologists that have submitted reports for
- 18 this MDL.
- 19 Q. Okay. And specifically, if you can
- 20 think back to your initial contact with
- 21 plaintiffs' counsel when you were asked to get
- <sup>22</sup> involved in the litigation, what specifically
- <sup>23</sup> were you asked to do, or what was your
- <sup>24</sup> understanding of what your role would be?
  - A. Yeah. My understanding was they had

- Page 205 Q. And do you specifically address in
- <sup>2</sup> terms of anatomic pathology or ovarian cancer
- pathogenesis the question of talc and ovarian
- cancer?

23

24

- A. I think that goes to the plausibility,
- the mechanisms, as part of it.
- Q. And which particular mechanisms are
- informed by the discipline of anatomic pathology
- and gynecologic pathology?
  - A. Well, I think pathologists, anatomical
- and clinical pathologists, have training in
- inflammation and immunology and certainly
- epidemiology, looking at epidemiologic studies.
- I think all of it is within the realm of
- gynecologic pathology.
- 16 Q. Did you discuss anywhere specifically
- in your report the biology of foreign body
- reactions and granulomas as a part of the
- biologic plausibility for exposure?
- 20 A. Let me refer to my report. I
- definitely talk about inflammation. I can do a word search for granulomas, if you would like.
  - Q. Do you talk about inflammation --
    - MR. ROTMAN: Would you like --
    - Q. -- in the context of anatomic

Page 206 Page 208 1 pathology? <sup>1</sup> any other portions of your report that directly 2 MR. ROTMAN: Would you like to do that? <sup>2</sup> address ovarian cancer pathogenesis from a pathology standpoint," and --<sup>3</sup> Because I can get your report up electronically. MS. AHERN: I know where she's A. So my answer is I did the work, but I <sup>5</sup> mentioned granulomas. I already know. I'm just <sup>5</sup> can't discuss it because of attorney work product asking her if she knows. issues. 7 MR. ROTMAN: So she wants to find it Q. Okay. MR. ROTMAN: You can -- she can -- you quickly. 9 MS. AHERN: You can give her your can ask her questions about it. computer and let her search. MS. AHERN: Sure. 10 11 MR. ROTMAN: Okay. That's what I was 11 MR. ROTMAN: But she's -- as to what is 12 asking. 12 in the report or not in the report, that's the work product piece. 13 BY MS. AHERN: 14 Q. Do you cite any publications describing 14 MS. AHERN: That's kind of all the 15 the biology of granulomas? 15 questions. 16 A. I know some of the literature talks 16 MR. ROTMAN: Ask her about the science. 17 <sup>17</sup> about granulomatous inflammation, discusses MS. AHERN: I'll ask, and you can granulomatous inflammation. 18 object. 19 MR. ROTMAN: If you want to search, do 19 MR. KLATT: Find out what is in or is 20 you know how to do it on this computer? Edit, 20 not in the report. 21 Find, then you can type in a word that you want MS. AHERN: Let's pick up the 22 to search. <sup>22</sup> foundation here. 23 MR. KLATT: Is there a question? BY MS. AHERN: A. So I mention it in the animal studies, Q. Doctor, first of all, you said you did <sup>25</sup> injecting talc into the pleural spaces causes 25 the work relating to ovarian cancer pathogenesis Page 207 Page 209 <sup>1</sup> from a pathology standpoint; correct? <sup>1</sup> granulomatous response. It looks like those are <sup>2</sup> the two. A. Yes. 3 And then I cite the Mostafa 1985 paper, Q. Was it ever in your report? MR. ROTMAN: That's part of the work 4 "Foreign body granulomas in normal ovaries." I'm double-checking. It looks like in doing product objection. <sup>6</sup> a word search for granuloma, that's what is MR. KLATT: We've got to establish the facts to know whether there's a basis to assert <sup>7</sup> popping up. 8 BY MS. AHERN: the objection. 9 Q. Okay. Are there any other portions of MR. ROTMAN: You can ask the question. 10 your report that directly address ovarian cancer But in order to answer the question, you're 11 pathogenesis from a pathology standpoint? invading the domain of what is protected under 12 MR. ROTMAN: Objection. 12 the Federal Rules in terms of the drafting of 13 A. This might be attorney work product expert reports. 14 draft stuff. 14 I will object and instruct her not to 15 MR. ROTMAN: Do you want to talk to me 15 answer. 16 outside where I can understand what you're What's in the report, you have. What was in drafts of the report, you're not entitled 17 getting at? 18 18 THE WITNESS: Sure. Sure. to. 19 19 THE VIDEOGRAPHER: Off the record, So that's the problem we have. 20 2:50 p.m. MR. KLATT: She's not asking what was 21 in the report. She's asking whether it was or (A recess was taken.) 22 isn't. So we can establish if there's anything THE VIDEOGRAPHER: Back on the record, 23 2:54 p.m. to even have a dispute about.

Q. Okay. Doctor, I had asked: "Are there

24 BY MS. AHERN:

25

MR. ROTMAN: You can ask her about what

25 is in the report all you want.

Page 210 1 MS. AHERN: Well, she's already said

<sup>2</sup> there was a section on ovarian cancer

<sup>3</sup> pathogenesis from a pathology standpoint in the

report, and it was removed; correct? 5 MR. TISI: That's not what she

6 testified.

MS. AHERN: Read back.

8 MR. TISI: Why don't we read what she

said because she said the answer is:

10 "ANSWER: I did the work, but I can't 11 discuss it because of attorney work product."

12 MS. AHERN: Okay. Okay.

13 MR. TISI: She never said it was in the 14 report.

15 MS. AHERN: Thank you.

16 MR. TISI: Line 48.

BY MS. AHERN:

18 Q. When you say you "did the work," did you take any notes on any reading that you did on ovarian cancer pathogenesis?

21 A. So in writing this report, I generally did not take any notes, handwritten notes. It

was sort of a living document that I used. Q. Now, earlier, you referred several

25 times to taking notes as you were going through

<sup>1</sup> let me rephrase it.

As a gynecologic pathologist who was asked

Page 212

<sup>3</sup> to opine on ovarian cancer and talc, did you

4 assume that part of your opinions would be to

<sup>5</sup> incorporate your expertise in anatomic pathology

and gynecologic pathology? MR. ROTMAN: Wait. Wait. Wait. Wait.

Wait. MS. AHERN: I'm only concerned if she understands the question.

BY MS. AHERN:

12

Q. Do you understand the question?

13 MR. ROTMAN: No. You have to let me see if I understand the question to see if I'm going to object to it before she's allowed to 16 answer.

17 MS. AHERN: Why don't you make an objection, and we'll move on.

MR. TISI: Because he may instruct her not to answer the question.

MS. AHERN: This is not -- this is not a question that should invade your privilege.

23 MR. TISI: It involves the discussion <sup>24</sup> between counsel and in the drafting of the reports, what would be in, what would be out,

Page 213

Page 211

<sup>1</sup> literature.

9

17

18

24

25

Are all those notes something that became --<sup>3</sup> on a single document that ultimately became a 4 report?

A. It was one document that went through 6 numerous, numerous editing on my part and, of <sup>7</sup> course, suggestions from attorneys at different 8 points.

Q. Now, as an anatomic pathologist and as <sup>10</sup> the only pathologist that has been designated by 11 the plaintiffs in this MDL, did you think that it was important to opine on the pathogenesis of <sup>13</sup> ovarian cancer from an anatomic pathology standpoint?

15 MR. ROTMAN: Objection. For what 16 purpose?

MS. AHERN: I'm asking her.

Q. Can you answer the question?

19 A. First of all, I wasn't aware I was the only pathologist because I didn't have a list of 21 their named experts.

22 I did work on -- I'm not sure how much I can really talk about the whole draft process.

MR. ROTMAN: You can't --

Q. So my question was: As an anatomic --

<sup>1</sup> what she thought, what she didn't think. You're <sup>2</sup> not entitled to any of that.

MR. ROTMAN: So if you can find the question, read the question, and I will object to

the question, but you can answer it.

A. Okay. So you want me to reread the question?

MR. ROTMAN: To yourself.

9 So my question was -- do you see that? 10 THE WITNESS: Yeah.

A. Well, I feel as if I did that in my <sup>12</sup> final report. I certainly -- the -- my opinions 13 that are in my final report are certainly within the realm of gynecologic pathology.

Q. And can you specifically point to the opinions and the discussions in your report that are within your personal expertise in gynecologic pathology?

19 A. So, again, review of epidemiology is something that physicians do on a regular basis.

<sup>21</sup> We're trained to look at epi data. We're trained to practice evidence-based medicine, which has a

very similar, if not identical, methodology.

So -- and we certainly are trained in <sup>25</sup> inflammation, the immune system, talc and

- <sup>1</sup> tissue -- I have a section on talc and tissue --<sup>2</sup> the epi data.
- Not -- I don't think any of this report is 4 outside of my -- I know that none of this is
- <sup>5</sup> outside of my expertise as a gynecologic pathologist.
- Q. Okay. Doctor, were you retained as an expert epidemiologist in this case?
- A. I was retained as a gynecologic 10 pathologist.
- 11 Q. And you are not an epidemiologist; 12 correct?
- 13 A. I'm not a epidemiologist, but we <sup>14</sup> certainly review epidemiology and critique <sup>15</sup> epidemiology studies on a regular basis in our <sup>16</sup> daily practice.
- Q. When people ask you what you do for a 18 living, you don't tell them you're an 19 epidemiologist, do you?
- 20 A. I often have to explain what a 21 pathologist is, so I spend half the time just
- trying to describe what a pathologist is, so... 23 MR. KLATT: Objection. Nonresponsive.
- 24 MS. AHERN: Yeah.
- 25 MR. ROTMAN: She's not done answering

11

13

Page 215

- <sup>1</sup> your question. She's in the middle of an answer.
  - A. So my point is I'm unlikely to describe
- <sup>3</sup> myself as an epidemiologist when I'm trying to 4 describe what a pathologist does, but that's the
- <sup>5</sup> big picture.
- But the real picture is, on a daily basis,
- 7 we are evaluating epidemiologic data in the
- 8 literature.

13

- 9 BY MS. AHERN:
- 10 Q. When was the last time you did a 11 systematic review of the literature for the purpose of opining on causation?
  - A. So we review literature --
  - Q. You. I'm just talking about you.
- 15 A. Hold on one second. Let me just review
- the question. I'm way behind here on my --
- 17 Well, I do literature searches all the time
- 18 and looking -- when I'm looking at cases to 19 figure out causation.
- 20 I've been involved in one other legal case,
- 21 but it is -- this was the first medical-legal
- general causation report.
- 23 But, again, this is all the same methodology
- <sup>24</sup> that we use in evidence-based medicine and our practice.

Page 216

- Q. You do a full systematic review of the <sup>2</sup> literature, as that term is defined
- epidemiologically?
- A. We certainly do when we're doing
- research, when we're writing papers, but we still
- <sup>6</sup> do literature searches when we're assigning out
- cases that are relevant to individual patients.
- Q. When was the last time you conducted a
- full systematic review of the literature and a
- Bradford Hill analysis to opine on causation?
- A. So, again, this is not something that's completely foreign to me. The legal aspect of it
- is new to me, but this methodology is not new to 14 me.
- 15 The last time -- I mean, there was a tobacco
- case that I worked on, but in my daily practice,
- again, I'm still looking at epidemiology
- literature all the time.
- 19 Q. Well, there is a difference, Doctor,
- wouldn't you agree, between looking at the
- epidemiology to inform yourself about a
- particular issue and doing a systematic review of
- the literature and a full Bradford Hill analysis
- <sup>24</sup> to opine on causation? Is there a difference?
  - A. Well, this was a deep dive, so I'll say

Page 217

- <sup>1</sup> I was aware of the literature on talcum powder
- <sup>2</sup> and ovarian cancer before I became involved in
- <sup>3</sup> this litigation.
- I will say, you know, it wasn't until they
- asked me to form my opinion on this that I did a
- deep dive on the literature again on this
- particular issue.
- Again, I've certainly done extensive
- <sup>9</sup> literature reviews before to, you know -- in
- research and in practice.
  - Q. But nothing like this?
- 12 A. It's very similar.
  - MR. ROTMAN: Objection.
  - A. The methodology is very similar to
- 15 this. It's identical.
- 16 Q. Doctor, can you point me to -- take a 17 look at Exhibit 2, your CV.
- Can you point me to something in your CV
- that demonstrates some specialized knowledge or
- expertise in epidemiology? A course, a class
- you've taught? A paper that you've published? A
- 22 case-control study you've been involved in?
- Anything that would indicate that you have
- specialized expertise in epidemiology? 25
  - A. It's part of our medical training as

1

4

14

Page 218

- 1 part of evidence-based medicine.
- I'm trying to find my CV. I'm not sure I
- <sup>3</sup> have it in front of me. Maybe it's under here.
- 4 Well, you're sitting in -- I mean, all of these
- <sup>5</sup> involved epidemiology research.
  - MR. ROTMAN: All of what?
- A. I'm sorry. All of these research
- projects start with -- the pathology publications
- <sup>9</sup> start with looking at the literature of
- <sup>10</sup> epidemiology.

6

- 11 Q. Which ones are you pointing to --
- 12 sorry. Let's look at the peer-reviewed
- <sup>13</sup> publications.
- 14 Is that what you're talking about?
- 15 A. Yes. Sorry.
- 16 Q. So the first publication is Narasimhan,
- 17 "Temperature Induced Interstrand Crosslinks in
- 18 Cisplatin-DNA Adducts Detected by Electrophoresis
- and UV Spectrophotometer."
- 20 That's not an epi study, is it?
- 21 A. Some of these were biology. The one
- 22 that comes to mind when I'm looking at this list
- 23 is the "Yersinia pestis and the plague." That
- 24 was a review article. That was around -- that
- <sup>25</sup> was after the 2001 mailings of the pattern
- Page 219
- <sup>1</sup> substance. And so the literature was very
- <sup>2</sup> interested in Yersinia pestis at the time, and so
- <sup>3</sup> I did a review article on that.
- Q. Was that a systematic review and a
- <sup>5</sup> Bradford Hill analysis?
- A. The Bradford Hill analysis is part of
- evidence-based medicine when you're coming to a
- conclusion. So --
- 9 Q. This isn't a case-control study or a
- prospective cohort study --10
- 11 MR. ROTMAN: You're not allowing her to
- 12 finish her answer.
- Q. -- or epidemiology study, is it?
- A. But my general causation opinion is
- <sup>15</sup> very similar to a review article on causation.
- <sup>16</sup> It's a review of the epi data and mechanisms.
- 17 Q. Did you do a full review of the epi
- <sup>18</sup> data and mechanisms on Yersinian plague?
- 19 It's kind of a done deal; right? We already
- 20 know that; isn't that right?
- A. Well, you're still looking at -- you're
- 22 still looking at data. The question is -- the
- <sup>23</sup> question was at the time: Can Yersinia pestis be
- <sup>24</sup> a dangerous weapon of destruction or
- <sup>25</sup> terrorist-type agent?

- Page 220 So that was sort of more the review on that.
- Q. Who is S.M. Rollins?
- 3 A. That's my ex-husband.
  - Q. What is his specialty?
- 5 A. He's a microbiologist. 6
  - Q. What about Ryan?
    - A. He is an infectious disease physician.
- Q. Okay. What portion of "Yersinia pestis
- and the plague" did you draft or did you
- contribute?
- 11 A. I drafted the entire -- I was the lead
- author, and I -- the primary author, and I
- drafted that report.
  - Q. Okay. So if we go in there, we're
- going to find you used statistical methods or
- analysis in any way to weigh the evidence and
- conduct a systematic review?
  - A. It's definitely a review article. Off
- the top of my head, I don't know if I did a
- 20 statistical analysis, but...
- 21 Q. Would you describe it as more of a
- narrative review of the literature?
- 23 A. A review of the literature. I don't
  - know about the word "narrative," but review.
    - Q. What about the Grundy paper,

Page 221

- <sup>1</sup> "Specificity of tRNA-mRNA Interactions in
- <sup>2</sup> Bacillus substilis tyrS Antitermination"?
- Is that an epi study?
- 4 A. No.
- Q. What about the Rollins paper,
- "Diagnostic yield of muscle biopsy in patients
- with clinical evidence of mitochondrial
- cytopathy"?
- 9 Is that an epidemiologic article?
- 10 A. No. That's not an epidemiology
- 11 article, but we --
- 12 Q. Sorry?

- A. It's getting late in the day.
- 14 MR. TISI: Do you need some water?
- 15 THE WITNESS: Sure.
- 16 A. But it's interesting that it actually
- did involve electron microscopy. And when we do
- muscle biopsies for mitochondrial cytopathy, we
- use electron microscopy anyway, regularly.
- 20 MR. KLATT: Objection. Nonresponsive.
- 21 Q. And what about the Rollins
  - "Autoimplants and serous borderline tumors of the
- ovary: A clinicopathologic study of 30 cases and
- a process to be distinguished from serous
- adenocarcinoma"?

- Was that a systematic review of the
- <sup>2</sup> literature, or an epidemiologic study?
- A. There's definitely review of literature
- 4 as part of that study because the question arises
- <sup>5</sup> with autoimplants, sometimes they're misdiagnosed
- 6 as invasive serous.
- So there is definitely literature review forthat study.
- <sup>9</sup> Q. This would be described as you have it
- <sup>10</sup> in the title, this is a clinicopathologic study?
- 11 A. Correct.
- Q. So you were looking at this as a
- <sup>13</sup> pathologist; correct?
- A. Well, I'm looking at -- I mean, some of
- 15 these were before I was -- the first couple are
- <sup>16</sup> before I was an M.D., but all of the subsequent
- ones I'm looking at as a pathologist.
- Q. What about the Chan study,
- 19 "Clinicopathologic Correlation of Fetal Vessel
- <sup>20</sup> Thrombosis in Mono- and Dichorionic Twin
- 21 Placentas"?
- Is that an epidemiologic study?
- A. That's a clinicopathologic correlation.
- Q. And then the publication with Jonathan
- <sup>25</sup> Hecht, "Endometrial Interepithelial Neoplasia,"

Page 223

- <sup>1</sup> is that an epidemiology study?
- A. That was a review of a new terminology
- <sup>3</sup> in endometrial precursor lesions. So that was a
- <sup>4</sup> pathologic -- an anatomic pathology article.
- <sup>5</sup> Q. And then you have the one with Haspel,
- <sup>6</sup> which is "Successful Implementation of a
- <sup>7</sup> Longitudinal, Integrated Pathology Curriculum
- <sup>8</sup> During the Third Year of Medical School"?
- <sup>9</sup> A. That was a medical-education-type <sup>10</sup> article.
- Q. Okay. And do you have any proceedings
- <sup>12</sup> of meetings, poster presentations, that were from
- <sup>13</sup> a case-control or a cohort study that you
- 14 conducted?
- A. Let me look. I don't believe these
- <sup>16</sup> poster presentations were case -- well, I mean,
- <sup>17</sup> case-control or cohort epi-type studies.
- Q. Okay. And, Doctor, to be fair, you
- <sup>19</sup> don't have a degree in epidemiology; correct?
- A. I do not have a degree. But, again,
- 21 it's -- epidemiology is a very big part of
- <sup>22</sup> evidence-based medicine and what we practice as
- 23 M.D.s.

25

- MR. KLATT: Objection. Nonresponsive.
  - Q. And, Doctor, you understand that there

- <sup>1</sup> are degreed epidemiologists who have been
- <sup>2</sup> designated on behalf of plaintiffs to look at
- <sup>3</sup> these issues; correct?
- A. I'm aware of that now. I didn't know
- who their list was before I submitted my report.
- Q. You've never published -- as we just
- <sup>7</sup> looked through here -- an epidemiologic study, a
- 8 case-control study, or a cohort study?
  - A. I have not published; but, again, that
- 10 doesn't -- I mean, it doesn't mean I haven't done
- 11 them. It's just that --
  - Q. Have you done them?
  - A. They haven't been published. Well,
- <sup>14</sup> again, literature reviews of epidemiology is part
  - <sup>5</sup> of our regular practice.
- Q. I'm asking about, like, actual study
- <sup>17</sup> designs.

12

13

21

- Have you conducted a case-control or a
- 19 cohort study?
- A. Not of an epi- --
  - Q. Okay.
- <sup>22</sup> A. -- specific design.
- Q. Have you ever taught an epidemiology
- 24 course?
  - A. No.

Page 225

- Q. Do you have any grant funding to
- <sup>2</sup> conduct epidemiologic observational studies?
  - A. No.
- <sup>4</sup> Q. Have you ever given any lectures or
- <sup>5</sup> presentations specifically on epidemiology
- 6 methodologies?
  - A. That's possible. I'm trying to think.
- <sup>8</sup> It's been a long time. Medical school through
- <sup>9</sup> residency, fellowship, not that I can think of
- off the top of my head.
- Q. Okay. And have you ever designed a clinical trial?
  - A. I have not designed a clinical trial.
  - Q. Have you designed a case-control study?
- <sup>15</sup> A. I have not designed a case-control
- 16 study.

13

14

- Q. Have you designed a cohort study?
- A. I have not designed a cohort study;
- <sup>19</sup> but, again, these are -- we can critically
- <sup>20</sup> evaluate. Just because I haven't designed one
- <sup>21</sup> doesn't mean I can't critically evaluate
- <sup>22</sup> case-control studies or cohort studies.
- Q. Doctor, you haven't conducted a
   meta-analysis or a pooled analysis to evaluate
- potential risk factors for any disease, have you?

A. No, I haven't.

1

Q. Are you qualified to conduct a

<sup>3</sup> meta-analysis or a pooled analysis?

- A. I'm -- I'm sure I could develop one.
- Q. As we sit here today, are you qualified
- <sup>6</sup> to conduct a meta-analysis or a pooled analysis?
  - A. If it was sort of a joint venture, I'm
- 8 sure; but, again, that doesn't mean that I can't
- <sup>9</sup> critically evaluate them, because that's what I
- odo on a daily basis.
- Q. Have you authored any paper or
- 12 conducted a study -- well, have you authored any
- paper on the methods of causal interpretation?
- A. Have I authored a paper on the methods
- <sup>15</sup> of causal interpretation?
- <sup>16</sup> I don't believe I've authored. It would be
- <sup>17</sup> on my list.
- Q. Okay. Doctor, I should have asked you
- 19 this when it was in front of you: Do you have a
- <sup>20</sup> copy of that one-page additional materials?
- A. Probably. Let's see.
- Q. Thank you. Maybe I have. Maybe I have
- <sup>23</sup> it too.
- <sup>24</sup> A. Exhibit 17?
- O. Yes. Yes.

- <sup>1</sup> asbestos in it, that would certainly add to the
  - <sup>2</sup> plausibility of causation.
  - O. If there was not asbestos in talcum
  - 4 powder products and there was not fragrance in

Page 228

Page 229

- <sup>5</sup> talcum powder products and you were just left
- <sup>6</sup> with the pharmaceutical-grade talc, what would
- <sup>7</sup> your biologic plausibility argument be?
  - MR. ROTMAN: Objection.
  - Q. In other words, what is your mechanism
- by which pharmaceutical-grade talc would cause
- 11 ovarian cancer?
- MR. ROTMAN: Objection. Are you asking
- <sup>3</sup> about causation or about biological plausibility?
- MS. AHERN: I'm asking --
  - MR. ROTMAN: You mixed them.
- MS. AHERN: -- about her mechanism.
- <sup>17</sup> BY MS. AHERN:
- Q. What is your mechanism by which
- <sup>19</sup> pharmaceutical-grade talc would cause ovarian
- 20 cancer?

15

- A. So there are -- again, most of the
- studies are dealing with talc powder products.
- <sup>23</sup> If we were to say that all that was in there is
- <sup>24</sup> pharmaceutical -- it's completely hypothetical
- <sup>25</sup> because I don't know what's in there -- I still
- Page 227
- You received a copy of the Longo
- <sup>2</sup> supplemental report; correct?
- <sup>3</sup> A. I did. Yes.
- 4 Q. And it's, what, 404 pages?
- 5 A. That's possible. I don't think I
- 6 looked.
- <sup>7</sup> Q. That was my next question: Did you
- 8 review it?
- 9 A. I did review it. I did skim a lot of
- 10 it because, again, it was additional information
- 11 that was nice to have, but it was after my
- <sup>12</sup> report.
- And, again, my general causation opinion is
- 14 not dependent on asbestos being in the product.
- 15 My general causation opinion is based on whatever
- 16 is in the bottle. So it was interesting
- <sup>17</sup> information to have.
- Q. So your opinions here, it doesn't
- 19 matter for your opinions whether or not there's
- <sup>20</sup> asbestos in talcum powder products; is that your
- 21 testimony?
- A. What I'm saying is my opinion is based
- 23 on whatever is in the talcum powder product's
- 24 bottle. Now, it's up to the jury to decide if
- 25 there's asbestos in it. However, if there is

- <sup>1</sup> think the mechanisms would be similar where, you
- <sup>2</sup> know, there's evidence that talc can cause
- <sup>3</sup> inflammation, and we know that inflammation is a
- <sup>4</sup> cause of cancer.
- 5 And so I -- and there's also, you know,
- <sup>6</sup> Dr. Cramer talked about anti-MUC-1 antibodies, so
- 7 there's an immune -- plausible immune mechanism,
- 8 so I think all of those are still on the table
- <sup>9</sup> and the hypothetical situation that it's only
- 10 pharmaceutical-grade talc in that bottle.
- But, again, I -- I'm not opining about what
- 12 is in the bottle; I'm just opining about that --
- whatever that product is in that bottle causing
- <sup>4</sup> ovarian cancer.
- Q. Okay. Let's take a look at your expert report again, Exhibit 14, if you will.
- Just let me know when you've got it.
- 18 A. Yeah

- Q. Okay. Doctor, does Exhibit 14, your
- 20 November 15, 2018, expert report, contain all of
- 21 the opinions that you intend to offer as a
- witness in this matter?
- A. I wouldn't box myself in that way.
- 24 There might be questions that I'm asked here
- today or in trial that aren't necessarily in my

<sup>1</sup> report.

Q. Okay. But the opinions that you intend <sup>3</sup> to offer, absent somebody asking you to offer

4 other opinions, are all outlined or contained

<sup>5</sup> within Exhibit 14, your report; is that correct?

A. Again, I wouldn't want to say "all." I

<sup>7</sup> wouldn't want to limit myself. There's always

8 the possibility that something else will come up,

<sup>9</sup> and I even have a thing that additional

<sup>10</sup> information may come up.

11 Q. Okay. As we sit here today, do you 12 understand that this is our opportunity to ask

you about the opinions in your report, and we

14 have the day to do it?

15 Do you understand that?

16 A. I understand.

17 Q. Okay. So to the extent that you think

you're going to offer additional opinions or

different opinions, we need to know that today.

I understand that if something comes up two

weeks from now and it's additional information,

you might supplement your report.

23 But as of today, as we sit here today, is

24 this report an accurate reflection of the

opinions that you have formed and that you intend

<sup>1</sup> probably have within them all the references to

<sup>2</sup> your report. Other than those and what you

<sup>3</sup> brought with you today, is there anything else

4 related to your work on your report that you have

<sup>5</sup> in your possession that you haven't been able to

6 bring with you today?

A. Not that I'm aware of. I've tried to

8 be very complete in my list of what I reviewed.

It's possible -- again, it's possible there are a

couple of things that might have been left off,

but I tried to be as complete as possible.

Q. Okay. And you mentioned earlier you

had done some work on the pathogenesis of ovarian

14

15

21

Did you have any articles or publications

16 that are related to that work that are not

referenced in your report?

A. I believe they should be in the list.

They should be included in the list that you

20 have.

Q. The one from -- your initial report?

22 A. Taken all together. Taken all

together. So that, probably, is more -- the

January 4th one would probably be some of those.

And then I can't remember what's on that one

Page 231

1 to offer in this case?

A. I would say it's an accurate reflection

<sup>3</sup> of the opinions I have formed with the exception

4 of anything that might be asked that is not in

<sup>5</sup> the report; but yes.

6 Q. All right. All right.

7 And as we sit here today, is your report

complete? 8

10

25

9 A. Well, it's signed and turned in, so --

Q. Do you, as the expert designated in

11 this case, Sarah Kane, do you consider your

report to be complete as we sit here today?

13 A. Yes.

14 MR. ROTMAN: Off the record.

15 (Discussion off the record.)

16 THE VIDEOGRAPHER: Off the record,

17 3:24 p.m.

18 (A recess was taken.)

19 THE VIDEOGRAPHER: Here begins Media

No. 5 in today's deposition of Sarah Kane, M.D.

21 Back on the record, 3:39 p.m.

22 BY MS. AHERN:

23 Q. Okay. Dr. Kane, we were talking about

24 your report. Just some basic housekeeping first.

We have the four boxes back here which

Page 233

Page 232

<sup>1</sup> that you just got, but if there's a couple on

<sup>2</sup> there.

But I would think if they weren't cited in

4 the report, the majority of those should be in

the January 4th list.

Q. Okay. And those would pertain to the

various histologic categorizations of ovarian

cancer; what is known about etiology.

9 Is that kind of the gist of the information

10 that you researched? 11

A. Yes. Yes. That was certainly part of

<sup>12</sup> it.

13

14

22

Q. And were there other parts to that?

THE WITNESS: Is that -- I don't know

<sup>15</sup> if --

16 MR. ROTMAN: Yeah. You can say what 17

work you did.

A. There was -- so a good bit of it was

sort of background information on the pathologic

diagnosis of ovarian cancer and different, as you

said, different subtypes.

There was -- I'm trying to remember -- it

was so long ago -- what some of the -- I believe

there was a little bit more on inflammation, but

<sup>25</sup> I can't say for sure.

Page  $\overline{234}$ 

<sup>1</sup> BY MS. AHERN:

- Q. And would that have been just related
- <sup>3</sup> to ovarian cancer pathogenesis?
- A. Yes. Yes.
- Q. And you think that all of the
- <sup>6</sup> publications that you found, identified, reviewed
- <sup>7</sup> in relation to that work are identified in one of
- 8 the lists or across several lists?
- 9 A. I'm hoping that across all of the
- 10 lists, that encompasses the vast majority, if not
- 11 all. But let's just keep it at vast majority.
- 12 And, of course, you know, I'm a gynecologic
- pathologist, so I read tons of other stuff that,
- 14 you know, is just my background knowledge that
- <sup>15</sup> I'm not going to put on these lists. So I can't
- <sup>16</sup> say it's all-inclusive; but, again, I tried.
- Q. Understood. Understood.
- 18 And you've now seen at least one report from
- <sup>19</sup> Dr. Robert Kurman; correct?
- 20 A. That's correct. That was an individual
- 21 causation report, though. So...
- 22 Q. And he had a very large background
- 23 section on ovarian cancer pathogenesis; correct?
  - A. To be honest with you, I sort of
- skimmed it, but I do remember seeing a section on

- Page 236
- <sup>2</sup> the product of your own work?
- A. Yes. I wrote the report. Certainly,
- <sup>4</sup> again, there were drafts that went back and
- forth. There may have been suggestions from

<sup>1</sup> Exhibit 14, your expert report, are they solely

- attorneys where language was -- that I accepted
- into my report; but yes.
- Q. Okay. You didn't borrow language from
- other experts or from other publications and then
- not quote that in your report?
- 11 A. I certainly tried not to. No. I
- 12 certainly cited anything that I -- I tried to
- cite everything that I referenced --
- 14 Q. Okay.

15

- A. -- to the best of my ability.
- 16 You know, again, I was taking the notes as I
- wrote, so it's plausible there might be
- something, but I was very cognizant of trying not
- to -- trying to cite everything that I was
- referencing.
- 21 Q. And in reaching your opinions, was it
- 22 important to you that you review the data in a
- fair and objective way?
  - A. Yes. I think it's always important to
- <sup>25</sup> review data in a fair and objective way.

Page 235

- <sup>1</sup> that. Yes.
- Q. Okay. Did you skim the section that <sup>3</sup> was case-specific?
- A. No. Mostly the background since I
- already know that stuff.
- Q. Okay. And is the stuff that was in his <sup>7</sup> background section similar to the research that 8
- you did?
- 9 A. I would say yes. If I am remembering
- accurately, it was similar. I wouldn't say
- <sup>11</sup> identical, but similar.
- 12 Q. Okay. And did anyone other than your attorneys assist you in preparing the report?
- 14 A. No.

19

22

- 15 Q. And you said earlier, I think, that you
- didn't consult with any of the other experts in
- the MDL litigation in forming your opinions or
- 18 preparing your report?
  - A. That's correct.
- Q. And you didn't review any draft reports
- <sup>21</sup> from any other experts in this litigation? A. No. The only time I saw their reports
- was after we had all turned them in to the court.
- Q. Okay. And are all of the words, the
- <sup>25</sup> ideas, the analysis that's contained in

Q. I know. It's kind of a basic question.

Page 237

- When you were doing your literature reviews
- <sup>3</sup> and searches, were you looking both for papers or
- <sup>4</sup> data that supported talc and ovarian cancer
- connection as well as for data and literature
- 6 that did not or that -- well, that did not
- support?
- A. When I was doing my literature search,
- <sup>9</sup> I was looking for any data that spoke to talcum
- powder products and ovarian cancer. I was really
- 11 trying to cast as wide a net as possible to get
- <sup>12</sup> as much data as I could.
  - Now, certainly, there are limitations when
- you're doing searches. It's possible there are
- studies that I missed; but when I was retrieving
- studies, reading them, I would also reference
- their references as a sort of cross-check. So I
- tried to be as complete as I could.
- 19 Q. So when you were reading someone else's work and they referenced an article as the basis
- for synthesis or the statement in their paper,
- <sup>22</sup> did you then go and review the underlying
- 23 reference as well?

- 24 A. Yes. I pulled up those references.
  - Q. Okay. And you reviewed those as well?

A. Yes.

1

- <sup>2</sup> Q. Okay. And you mentioned on Page 4 of <sup>3</sup> your report that your interest in talc and
- <sup>4</sup> ovarian cancer began during your training, your
- fellowship training, at Mass General; is thatright?
- A. I became aware of it. I mean, both
- <sup>8</sup> Dr. Scully and Dr. Bell were still there at my
- <sup>9</sup> time of training, and Dr. Scully was a coauthor on Cramer's first 1982 paper.
- And then Dr. Bell was a coauthor in one of the subsequent -- I think his 1992 paper with Harlow.
- So I was certainly aware of literature on
   talcum powder and ovarian cancer.
- Q. And neither one of them published anything else on talc; is that correct?
- <sup>18</sup> A. I believe those were the only two that <sup>19</sup> they were on. That's correct.
- Q. And did you understand that the role that Dr. Scully played on Dr. Cramer's first publication was simply that of pathologist and determining or confirming the diagnosis of the samples that were being studied?
- A. I was aware that he did a pathologic

Page 240

- $^{\, 1}$  I know we talked about the Nurses' Health Study.
- That's funny, though, I actually did talk --
- <sup>3</sup> I saw Jonathan last night, so it's kind of funny
- <sup>4</sup> timing. But anyway...
- Q. Have you talked to Dr. Hecht since
- 6 then, since you first discussed with him the
- <sup>7</sup> Nurses' Health Study?
- <sup>8</sup> Have you spoken with him on talc and ovarian
- <sup>9</sup> cancer?
- A. Yes. I saw him last night. We went out for a drink.
- Q. Did he give you any opinions on what he thought about talc and ovarian cancer?
- A. He told me that he had met with defense counsel at one point; did not want to do medical expert witness work but did a brief sort of intro, I guess, overview for the defense.
- Q. Did he tell you what his personal or his professional opinion was on whether or not talc causes ovarian cancer?
- A. Yes. He thought that -- so I'll say in my report, I did not spend a lot of time on
- <sup>23</sup> migration because in the gynecologic world, it's
- <sup>24</sup> widely accepted that migration happens. He told
- $^{25}\,$  me that he specifically told the defense counsel

Page 241

Page 239

<sup>1</sup> review of the case.

- Q. Okay. Did you ever have an opportunity to talk to Dr. Scully about talc and ovarian cancer?
- A. I believe my conversations were -- my memory is -- this is 20 years ago now -- it's
- possible, but probably with Dr. Bell, more. I
  interacted more with Dr. Bell than Dr. Scully.
- <sup>9</sup> Dr. Scully was semiretired at the time. He
- $^{10}$  would come in for half the day, but that was
- 11 usually when I was with other attendings. But I
- did spend a significant time with Dr. Bell, and I
- do remember being aware of that literature.
   Now, if you're going to ask me the specific
- conversation, I probably can't prompt that at the moment.
- I was also, when I was at Beth Israel
- 18 Deaconess, my colleague Jonathan Hecht is there.
- <sup>19</sup> And I was aware he was doing work on the Nurses'
- <sup>20</sup> Health Study.
- We didn't -- I can't remember if we really
- 22 talked about talc at that point because the Gates
- 23 2010 paper that he was doing, talc was a very
- 24 small -- it was almost, like, a side comment in
- 25 that report. But I think we had talked about --

- <sup>1</sup> he met with not to use migration because it's
- <sup>2</sup> widely accepted that it occurs.
- We did talk about the Nurses' Health paper.
- <sup>4</sup> He said that the data set was very small, it was
- <sup>5</sup> very difficult with classification, and that
- 6 that -- there just really wasn't a lot of data in
- 7 that 2010 study.

- 8 And he thinks that it is plausible for
- <sup>9</sup> talcum powder to cause ovarian cancer.
  - Q. Have you spoken to any other
- pathologist or colleagues about talc and ovarian cancer?
- A. I have talked to my coworkers about it
- because -- as a conflict-of-interest notification
- <sup>15</sup> for our group and for our hospital, Partners
- Healthcare, and I discussed my findings with mypartners.
- And I've also talked about it at
- <sup>19</sup> multidisciplinary conferences; recently at, for
- example, at a thoracic conference. There were
- gyn oncs there and radiologists and rad oncpeople there.
- Q. And you talked to them specifically about talc and ovarian cancer?
  - A. So I told them about my work on it and

- <sup>1</sup> the research that I had done, and I was asking
- <sup>2</sup> them -- it was a thoracic conference, so I was
- <sup>3</sup> curious if any of them had asked any of their
- 4 mesothelioma patients that didn't have
- <sup>5</sup> nonasbestos exposure if they've ever asked them
- <sup>6</sup> if they'd had talc exposure.
- And they said no, they hadn't really done
- 8 it, they hadn't thought about it, but maybe it
- <sup>9</sup> was something that they should be asking.
- Q. And, by the way, what were the
- $^{\rm 11}\,$  circumstances under which you and Dr. Hecht had
- 12 dinner the other night?
- A. His birthday is coming up. We're still
- 14 friends, so it was one of these -- I actually
- 15 stayed in a hotel last night because it took me
- <sup>16</sup> an hour and a half to drive from Topsfield
- <sup>17</sup> yesterday morning, and I didn't want to be
- 18 worried about traffic. So I decided to stay in a
- 19 hotel last night. His birthday is coming up, so
- <sup>20</sup> I said, "Let's just grab a drink."
- Q. You mentioned while you were at Mass
- <sup>22</sup> General, the fellowship director for your program
- was Robert Young; correct?
- <sup>24</sup> A. Yes.
- Q. Is he someone that you look up to as a

- <sup>1</sup> Dr. Scully retired; is that right?
- A. Yes. He inherited his consult service.

Page 244

Page 245

- <sup>3</sup> So it's a separate service from our regular
- <sup>4</sup> clinical work. So it's pathologists from all
- <sup>5</sup> over the country or even world that have
- <sup>6</sup> difficult cases, they will send as a specific
- <sup>7</sup> private consult to -- it was Dr. Scully, and now
- 8 it's Dr. Young.
- <sup>9</sup> Q. Okay. When you were first contacted by
- the plaintiffs' counsel back in 2017, what were
- your opinions regarding talc and ovarian cancer
- <sup>2</sup> at that point?
- <sup>13</sup> A. First contacted? When I was first
- <sup>14</sup> contacted, I was aware of the literature,
- <sup>15</sup> certainly. I hadn't come to a strong opinion one
- <sup>16</sup> way or the other. In fact, I'd probably say I
- was aware that the epi data had been relatively
- 18 consistent. That was kind of all I knew about it
- <sup>19</sup> until I did my sort of deep dive into the
- literature for my general causation opinion.
   O So as a pathologist, you never had a
- Q. So as a pathologist, you never had a
- <sup>22</sup> particular interest in pursuing additional
- 23 research in the area --
  - MR. ROTMAN: Objection.
  - Q. -- of talc and ovarian cancer?

Page 243

24

- <sup>1</sup> pathologist?
  - A. Yes. He's very well-respected.
- <sup>3</sup> Q. By the way, who do you send second
- <sup>4</sup> opinion consults to when you have a difficult
- 5 case?
- <sup>6</sup> A. We have a relationship with Mass
- <sup>7</sup> General, so I'll occasionally send -- if I need
- 8 another set of eyes on, I'll send it to either --
- <sup>9</sup> it's sort of their gyn pathology group in
- 10 general, so it might be Dr. Young. It might be
- 11 Esther Oliva. Those are the two that I would say
- 12 most frequently would receive any consults from
- our group for gyn path.
- 4 Q. Have you ever spoken with Dr. Young
- <sup>15</sup> about talc and ovarian cancer?
- <sup>6</sup> A. It's possible. I haven't recently. He
- and I aren't in regular communication, so I
- 18 certainly wouldn't have talked to him -- I don't
- 19 know if I've talked to him since starting this.
- It's more of a professional-type
- <sup>21</sup> relationship, so I don't know if it would have
- 22 come up recently. But it's possible in training,
- <sup>23</sup> but I don't remember specifically.
- Q. And Robin Young inherited all of
- <sup>25</sup> Dr. Scully's case files in his office when

- A. Well, there's certainly a lot of things
- <sup>2</sup> to study in gynecologic pathology. And so I
- <sup>3</sup> hadn't decided to take that -- to do that study
- <sup>4</sup> at the time that I was contacted by counsel.
- <sup>5</sup> That's not to say I never would have or I never
- 6 would have thought about it, but I hadn't at the
- 7 time.
- Q. Okay. In your report on Page 4, you
- 9 say that you've maintained a professional
- o interest -- "since your fellowship, you've
- maintained a professional interest and have
- <sup>12</sup> continued to monitor developments in the science
- 13 regarding talcum powder exposure and ovarian
- cancer, and it has been the subject of
- <sup>15</sup> professional discussions predating the
- <sup>16</sup> litigation."
- So what sort of professional discussions
- 18 about talc and ovarian cancer did you have before
- the plaintiffs retained you?
- A. So, again, I was aware of the
- 21 literature. And I knew -- I saw some of the
- newer epi data come out. I had had conversations
- <sup>23</sup> with Dr. Bell that I remember specifically;
- again, with Jonathan. I knew he was working on
- 25 that Nurses' Health. We certainly talked about

Page 246 Page 248

- <sup>1</sup> that study at some point.
- But, you know, I was certainly aware of the
- <sup>3</sup> literature as it came out.
- 4 Q. And you call it a "professional
- 5 interest."
- 6 Did you take -- other than just reviewing
- <sup>7</sup> the literature, did you do anything
- 8 professionally to either advance your knowledge
- <sup>9</sup> or other people's knowledge about this potential
- 10 association?
- 11 A. Not -- I mean, not at the time. I
- 12 think "professional interest" in my mind, you
- 13 know, means being aware of what's going on in the
- 14 literature. Again, that doesn't necessarily mean
- <sup>15</sup> an in-depth review of everything but being
- <sup>16</sup> generally aware of it.
- Q. Would you say that since you first
- 18 learned about this in your fellowship and were
- 19 interested in the topic, did it influence the way
- <sup>20</sup> you looked at gynecologic cases as a professional
- <sup>21</sup> pathologist?
- A. Yeah. It's not really routine practice
- 23 to use polarized light microscopy in gynecologic
- <sup>24</sup> pathology. It's just -- we use it more commonly
- <sup>25</sup> for breast cases, so...

Page 247

13

24

25

- And also, you know, even if we found
- <sup>2</sup> birefringent particles and granulomas or -- in
- <sup>3</sup> the tissue, it wouldn't necessarily mean that
- <sup>4</sup> they're talc unless you do subsequent studies.
- So I wouldn't say it changed my daily
- practice in diagnosing tumors.
- Q. Okay. Doctor, if you can turn to
- <sup>8</sup> Page 4 and 5 of your report.
- 9 Is this where you set out a summary of your 10 opinions?
- <sup>11</sup> A. Yes. This is.
- Q. Under Heading 2, Page 4, "General
- 13 causation opinions."
- <sup>14</sup> A. Okay.
- Q. And you list, it looks like, five specific opinions; is that correct?
- A. I see where you are. Yes.
- Q. And are those -- again, are those all the opinions that you have that you intend to
- <sup>20</sup> offer in this case?

- MR. ROTMAN: Objection.
- A. Same answer as before. Again, there
- <sup>23</sup> might be something that comes up today or at
- trial that I'm asked that I, you know, didn't put
   in this report. But I tried to be as -- complete

- <sup>1</sup> in the report.
- Q. Okay. And the first opinion is that
- <sup>3</sup> talc can migrate to the ovaries through the
- <sup>4</sup> genital tract through the lymphatic system and
- <sup>5</sup> through inhalation.
- Is that an accurate summary of your first
- opinion or set of opinions?
  - (reading from document)
- A. Yes. The talcum powder products can
- reach the ovaries; that they can be transported
- through the lymphatic system; and there is
- evidence that it can be inhaled as well with
  - transport to the ovaries.
  - Q. And the second opinion in the case or
- <sup>15</sup> second set of opinions is that talc causes
- <sup>16</sup> chronic inflammation in the ovaries, causes
- 17 increased oxidative stress in the ovaries, and
- 18 causes immunosuppression.
- 19 Is that an accurate summary of your
- 20 mechanism?
- A. Well, if you're going to read it word
- <sup>22</sup> for word, it's "Once reaching the ovaries, talcum
- 23 powder products can cause chronic inflammation,
- can increase oxidative stress, and can reduce
- <sup>25</sup> immune response. These are biologically
  - Page 249
- <sup>1</sup> plausible and likely mechanisms for ovarian
  - <sup>2</sup> cancer development and progression."
  - Q. Okay. When you say "reduce the immune
  - <sup>4</sup> response," is that essentially discussing, like,
  - <sup>5</sup> an immunosuppressive effect?
  - A. That's referencing the MUC-1 antibody
  - <sup>7</sup> paper that Cramer published in 2005.
  - Q. Are you aware that Dr. Cramer himself
  - <sup>9</sup> has disclaimed that theory as a "hypothesis
  - that's not ready for prime time"? I believe
  - <sup>1</sup> those were his words, "prime time."
  - A. I don't know where you saw those words.
    - Q. His testimony in the litigation.
  - A. Okay. I don't believe I saw his
  - testimony in the litigation. But, again, it's
  - not -- I'm not seeing it as something that needs
  - -- not -- I in not seeing it as sometiming that needs
  - <sup>7</sup> to be proven. I'm looking at it as a
  - <sup>18</sup> plausibility that, you know, it's a plausible
  - <sup>19</sup> mechanism. If it's not proven, it doesn't really
  - 20 change the fact that it's plausible.
  - Q. So are you building -- so is your plausibility opinion independent of whether or
  - 23 not the basis for that opinion is proven?
    - MR. ROTMAN: Objection.
    - Q. In other words, are you -- do you have

Filed 05/30/19 Page 314 of 565 PageID: ane, M.D. Page 250 Page 252 <sup>1</sup> a plausibility opinion that's based on a bunch of <sup>1</sup> reaching the ovaries. <sup>2</sup> other potential or plausible mechanisms? So -- and, again, it's widely accepted in 3 MR. ROTMAN: Objection. <sup>3</sup> the gynecologic community that migration occurs. 4 In fact, endometriosis, we really -- the evidence 4 A. Right. 5 MR. ROTMAN: I just objected, but you <sup>5</sup> is that endometriosis is caused by retrograde 6 can answer. If you can understand the question, 6 menstruation of endometrium. So there's a substantial amount of evidence you can answer it. A. Well, I think -- I think they're all and widely accepted that migration occurs. And I'm aware of studies that didn't find somewhat interrelated. I think there's the chronic inflammation. migration, but I think, you know, those few 11 There's the immune response. Those are plausible negative studies don't cancel out the positive studies. 12 mechanisms for ovarian cancer. 13 13 And the Bradford Hill guidelines, you don't And, you know, certainly, looking for migrated particles is very difficult. You know, 14 have to prove -- prove mechanism in order to have 15 causation. We have plenty of -- again, plenty of again, we're talking about dose. How much do you <sup>16</sup> examples of that in prior diseases, like smoking inject to get there? 17 <sup>17</sup> and lung cancer. And even certain drugs, they And so I think the positive studies are <sup>18</sup> don't know the mechanism of action, very common 18 compelling, and it's widely accepted that <sup>19</sup> drugs like lithium, for example, or metformin. migration occurs. 20 20 So you don't need to prove mechanism in (Article entitled "Presence of 21 order for it to be an important part of a 21 Talc in Pelvic Lymph Nodes of a Woman with 22 causation because it's part of the plausibility 22 Ovarian Cancer and Long-Term Genital 23 Exposure to Cosmetic Talc" marked Exhibit component. 24 Q. Do any of the bases on which you -- any 24 19.) of the bases that you use to support plausibility 25 Page 251 Page 253 <sup>1</sup> for talc and ovarian cancer, do any of them have <sup>1</sup> BY MS. AHERN: <sup>2</sup> to be proven or established? Q. Doctor, I'm handing you what's been MR. ROTMAN: Objection. marked as Exhibit 19 to your deposition. A. I think it's important to have evidence A. Okay. <sup>5</sup> to support it. There may be evidence that 5 MR. TISI: Thank you. 6 refutes it as well, but you're sort of looking MS. AHERN: You're welcome. <sup>7</sup> at -- you're balancing the weight of it. Q. Exhibit 19 is an article drafted by And the plausibility, a plausible mechanism, Dr. Dan Cramer, the "Presence of talc in pelvic 9 now, is that always going to be probable or lymph nodes of a woman with ovarian cancer and 10 definite? No. It's plausible. long-term genital exposure to cosmetic talc." 11 11 In this case, I think it's a compelling Is this a paper that you were referring to a

- 12 mechanism, chronic inflammation, because, again,
- 13 we know that talcum powder can reach the ovaries,
- 14 and we know that it can cause chronic
- 15 inflammation, and we know chronic inflammation is
- <sup>16</sup> implicated in cancer.
- 17 So I think it's a high degree of
- <sup>18</sup> plausibility in that case.
- 19 Q. So when you mention that you know that
- 20 talc can reach the ovaries, are you referring to,
- 21 for example, the Heller study?
- 22 A. So Heller found talc in women's
- <sup>23</sup> ovaries. Yes. Cramer found talc in pelvic lymph
- 24 nodes. We have other animal and human studies of
- 25 talc or particulates similar in size to talc

- 12 few minutes ago?

- A. The 2005, yes.
- 14 Q. This is 2007.
- 15 A. I'm sorry. Did I say 2005? Yes. This
- 16 is the paper, anyway.
- 17 Q. And the authors are Dan Cramer and Bill
- <sup>18</sup> Welch, Ross Berkowitz, and John Godleski. 19
  - Do you see that?
- 20 A. Yes.
- 21 Q. And three of those individuals have
- been disclosed as plaintiffs' experts in the talc
- 23 litigation. 24
  - Were you aware of that?
- 25 A. I was not aware of Bill Welch. I knew

- <sup>1</sup> after -- at some point, I was aware that
- <sup>2</sup> Dr. Cramer and Dr. Godleski was. I don't believe
- <sup>3</sup> I was aware of that at the beginning of my
- <sup>4</sup> research, but I became aware of that. Yes.
- Q. Okay. Are you aware that Dr. Welch has
- <sup>6</sup> been designated in maybe three cases and given
- testimony in those cases?
- A. Again, I was not aware that Bill Welch
- had been retained.
- Q. Are you aware that Dr. Welch has run 11 the pathology portion of Dr. Cramer's study
- 12 program for 40 years?
- 13 A. I'm aware who Dr. Welch is, and I've
- <sup>14</sup> certainly seen his name on papers. But now
- 15 his -- his role in these studies specifically, I
- <sup>16</sup> don't know if I can speak to other than he's
- <sup>17</sup> involved.
- Q. He's testified that his only role was
- <sup>19</sup> in identifying the types of tumors involved in
- <sup>20</sup> the study to keep people honest.
- 21 Are you aware that Dr. Welch has repeatedly
- <sup>22</sup> refused to give -- refused to give a causation
- opinion like you're giving today?
- A. I'm not aware of Dr. Welch's opinions.
- <sup>25</sup> I didn't know that he was an expert, so I

- Page 256
- A. I'm sorry. Where are you now?
- Q. Same sentence. He just finishes it
- with "Many subsequent studies found --
  - A. Okav.
- Q. -- "talc use to increase the risk for
- ovarian cancer."
- But he just cites himself again from 1982;
- correct?

10

12

13

15

- A. Sorry?
- Q. The only cite he provides for that
- statement is his own study from 1982?
  - A. Oh, the one -- the No. 1?
  - O. Mm-hmm.
- 14 A. Yes. That's his 1999, it says. 1999.
  - Q. Okay. Sorry about that. You're right.
- 16 And then he says, "However, the causality of
- the relationship has been challenged for several
- reasons."
- 19 Do you see that?
- 20 A. I do.
- 21 Q. And he says, "First, the association is
- a relatively weak one; i.e., summary relative
- risk of approximately 1.3."
- Do you agree that a summary relative risk of
- <sup>25</sup> 1.3 is a weak association?

Page 255

- <sup>1</sup> wouldn't have reviewed any of that testimony.
- O. Okay. You weren't provided with any of
- <sup>3</sup> his testimony or his reports in the litigation? A. No. I was not aware that he was a
- <sup>5</sup> medical expert witness.
- Q. Okay. Do you see under the
- <sup>7</sup> "Background" section here, it says, "Although
- 8 epidemiologic studies suggest talc may increase
- <sup>9</sup> ovarian cancer risk, there is no proof that talc
- <sup>10</sup> used externally reaches the pelvis"?
- 11 A. That's what it says.
- 12 Q. Are then if you look down in the -- I'm 13 sorry. I'm sorry.
- If you look down in the first paragraph, he
- <sup>15</sup> mentions, "An epidemiologic association between
- 16 the use of cosmetic talc and genital hygiene and
- ovarian cancer was first described in 1982."
- 18 That's Cramer citing Cramer; isn't it?
- 19 A. Let's see. Let me double-check. I'm
- <sup>20</sup> assuming because it's 1982. But let me
- <sup>21</sup> double-check. Or -- yeah. It's 1999. He's
- <sup>22</sup> referencing his 1999 paper.
- Q. And he says, "And the many subsequent
- 24 studies found talc use to increase the risk for
- <sup>25</sup> ovarian cancer."

A. I've seen "weak" or "moderate" used to

Page 257

- <sup>2</sup> describe a 1.3, but that doesn't mean it's not a
- significant one, especially in a rare disease
- <sup>4</sup> like ovarian cancer.
- MS. AHERN: Objection to the
- nonresponsive portion.
- Q. But I agree it's been described as
- "weak," at least here by Dr. Cramer?
- A. That's -- the sentence says, "First,
- the association is a relatively weak one; i.e.,
- summary relative risk of approximately 1.3."
- 12 Q. And he says, "Second, there's no clear
  - increase in risk with duration of use."
  - Do you agree with that, as of 2007, there
  - was no clear dose-response in the studies that looked at talc and ovarian cancer?
- 17 A. I think there was evidence of a
- dose-response by 2007. 19 Q. So do you disagree with Dr. Cramer's
- statement in the 2007 publication that as of that
- 21 time, there was no clear increase in risk with duration of use in most studies?
- 23
- A. I wouldn't necessarily phrase it that <sup>24</sup> way: There's no clear increased risk. I think,
- <sup>25</sup> again, there isn't a lot of data, but what data

- <sup>1</sup> there was -- I believe at that time, I'm trying
- <sup>2</sup> to think if I was in 2007 -- would be evidence
- <sup>3</sup> that there was a dose-response.
- Q. And which papers, prior to 2007, did
- <sup>5</sup> they find dose-response that was clear?
- A. I would have to look back.
- 7 Okay. So I tried to do this in chronologic <sup>8</sup> order.
- 9 Q. What page are you on?
- 10 A. I'm looking at 16.
- 11 Q. Page 16 of Exhibit 14?
- 12 A. Yes.
- 13 Q. Okay. Were --
- 14 A. I'm just trying to refresh my memory.
- 15 So Harlow's -- let's see -- 1992 study was,
- <sup>16</sup> it looks like, the first one that I have listed
- <sup>17</sup> that had a dose-response -- evaluated for
- dose-response.
- 19 They both -- let's see. The confidence
- <sup>20</sup> intervals all included the null. Life- -- so
- 21 what I wrote here -- this is Page 18 -- "lifetime
- <sup>22</sup> application ORs when compared to control women
- with no perineal talc exposure were 1.3, 4 less
- 24 than 1,000, with a confidence interval of 0.7 to
- <sup>25</sup> 2.7; 1.5 for 1,000 to 10,000 with a confidence
- <sup>1</sup> interval of 0.9 to 2.4; and 1.8 for greater than
- <sup>2</sup> 10,000 with the confidence interval of 1.0 to
- 3 3.0.
- And then I also -- yeah. So that's after
- <sup>5</sup> 2007, the Terry and the Lou studies.
- Q. You're looking at Harlow 1992?
- 7 A. Yes. That's the paragraph I'm looking
- 8 at.
- 9 O. And Harlow 1992 found a
- 10 nonstatistically significant increased risk; is
- 11 that correct?
- 12 A. So the confidence intervals included
- 13 the null. So, yeah, it was not statistically
- 14 significant. I'm not sure -- I don't have the
- 15 numbers here, though, of how many they had
- 16 dose-response data on, which would -- which might
- <sup>17</sup> increase the interval.
- 18 In fact, if you look at the confidence
- 19 intervals, they're pretty wide, trending toward
- <sup>20</sup> higher.
- 21 Q. What are the confidence intervals
- 22 you're looking at?
- 23 A. For less than 1,000 lifetime
- <sup>24</sup> applications, we're looking at 0.7 to 2.7.
- 25 For 1,000 to 10,000, we're looking at 0.9 to

1 2.4.

11

13

19

21

24

11

12

And for greater than 10,000, we're looking

Page 260

Page 261

- at 1.0 to 3.0.
- Q. And when they just adjusted -- when
- they excluded -- when they looked at lifetime
- <sup>6</sup> talc applications and ovarian cancer after
- <sup>7</sup> excluding use following hysterectomy or tubal
- ligation, they found no evidence of an
- exposure-response relationship, didn't they?
  - A. Are you looking at the actual paper?
  - Q. Do you need it?
- 12 A. If you're asking me questions about it.
- Q. Yeah. That wasn't in your report -- or is it? 14
- 15 MR. ROTMAN: What is the "it" referring 16 to?
- 17 Q. That particular finding is not in her
- report on dose-response from Harlow in 1992?
  - A. Well, yeah. Let me look at the --
- 20 MS. AHERN: Sure.
  - (Article entitled "Perineal
- 22 Exposure to Talc and Ovarian Cancer Risk"
- 23 marked Exhibit 20.)
  - MS. AHERN: I'll mark as Exhibit 20 to
- <sup>25</sup> your deposition "Perineal Exposure to Talc and

Page 259

- <sup>1</sup> Ovarian Cancer Risk" by Harlow, 1992. That's my
- <sup>2</sup> only copy. Sorry.
- MR. ROTMAN: Exhibit 20.
- A. Okay. So, I'm sorry, where are you
- looking?
- Q. Let me find it. Take your time, if you
- need to. I'm trying to find my copy.
- Okay. If you look at Table 3, "Estimated
- total lifetime perineal applications of talc
- containing powders and cases and controls."
  - A. Okay. I see Table 3.
  - MR. ROTMAN: Is there a question?
- 13 MS. AHERN: She asked to see the study.
- I asked her to confirm that once they excluded
- cases after hysterectomy or tubal ligation, there
- was no exposure-response relationship.
- A. These look to be similar -- oh, I see.
- <sup>18</sup> Okay. Total applications.
- 19 Well, if you actually look at the numbers,
- <sup>20</sup> the ones above, which are, I believe, what I
- quoted in my report, so under "Total
- applications."
- 23 And then you're asking me about applications
- excluding use after hysterectomy or tubal
- 25 ligation?

- <sup>1</sup> BY MS. AHERN:
- Q. Mm-hmm.
- <sup>3</sup> A. What was your question about it? I'm <sup>4</sup> sorry
- <sup>5</sup> Q. There's no statistically significant
- 6 dose-response relationship with lifetime
- <sup>7</sup> application?
- 8 A. So the confidence intervals are
- 9 somewhat similar, but -- are somewhat similar, it
  10 looks like, to the top.
- Q. There's no statistically significant
- dose-response relationship, is there?
- A. They all include the null. That's correct. But, again, they're trending high.
  - Q. But if they include the null, then it's consistent with the null hypothesis that there's no association; isn't that true?
- MR. ROTMAN: Objection.
- A. It's possible. The null hypothesis is included in "Possibilities."
- Q. It also basically means you can't exclude chance as a reason for the findings;
- <sup>23</sup> correct?
- A. Again, it's possible. I would say it's trending higher, but it does include the null

- 1 dose-response?
- A. Well, I state in my report what the
- <sup>3</sup> confidence intervals are. So certainly, I'm
- 4 showing that it did include the null hypothesis.
- <sup>5</sup> But I think it's still -- just because it's not
- 6 statistically significant, I think it's still
- <sup>7</sup> data, and I wouldn't completely discount it.
- But it does -- does contain the null. The
- <sup>9</sup> numbers weren't super high, if I remember. But
- on their -- I'll have to find it.
- On -- in their abstract conclusion, they
- 12 still say that "The greatest ovarian cancer risk
- 13 associated with perineal talc use was observed in
- 14 the subgroup of women estimated to have made more
- than 10,000 applications during years when they
- were ovulating and had an intact genital tract
- with the OR of 2.8 and a statistically
- significant confidence interval of 1.4 to 5.4.
- 19 However, this exposure was found in only
- 20 14 percent of the women with ovarian cancer."
- Q. Okay. But we were just asking -- you
- 22 mentioned the study as support for a
- 23 dose-response relationship in your report?
  - 4 A. As evidence of a dose -- a
- dose-response; again, with the caveat, which is

Page 263

- <sup>1</sup> hypothesis.
- Q. Do you see on Page 25, in the first
- <sup>3</sup> column on the left-hand side, the first full
- <sup>4</sup> paragraph, "In our analysis"?
- Okay. The authors say, "In our analysis, we
- <sup>6</sup> first calculated all genital applications of talc
- <sup>7</sup> based on frequency and years of use. As a
- <sup>8</sup> continuous variable in a multivariate model, no
- <sup>9</sup> significant dose-response was observed between
- <sup>10</sup> total genital applications of talc and ovarian
- <sup>11</sup> cancer risk"; correct?
- 12 A. That's what it says.
  - Q. And the reason they excluded
- 14 hysterectomy and tubal ligation is the next
- <sup>15</sup> sentence, "because the translocation theory
- <sup>16</sup> assumes an open genital tract, we then excluded
- <sup>17</sup> application after tubal ligation or hysterectomy
- <sup>18</sup> but observed no appreciable change in the
- <sup>19</sup> dose-response."

22

- In other words, still no significant
- <sup>21</sup> dose-response; correct?
  - A. That's what it says.
- Q. So the authors interpreted both the
- <sup>24</sup> data you cite in your report as well as the data
- <sup>25</sup> you didn't cite in your report as showing no

- <sup>1</sup> here, that it includes the null hypothesis.
- Q. Okay. And what about Cramer in 1999?

Page 265

- 3 MR. ROTMAN: Objection. I don't think
- 4 that's a question.
- 5 MS. AHERN: Fair point.
- 6 BY MS. AHERN:
- Q. In Cramer 1999, you've also cited as
- 8 evidence after dose-response, correct, on Page 35
- <sup>9</sup> of your report?
- A. I see that. Yes. It's listed in a
- 11 reference list.
- Q. And the authors, including Cramer,
- <sup>13</sup> basically say they "failed to demonstrate
- <sup>14</sup> consistent dose-response relationships with
- measures of intensity of exposure."
- MR. ROTMAN: Do you have -- do you have the paper?
- MS. AHERN: Do you want the paper?
  - MR. TISI: Is that the one you
- <sup>20</sup> identified before?
- MS. AHERN: No. This is a new one.
- MR. ROTMAN: She's getting the paper
- 23 out.

- MS. AHERN: I thought I had it too.
- 25 Maybe it's in one of the boxes. Let me see if I

Page 268 Page 266 <sup>1</sup> can find my own copy. <sup>1</sup> in the table. Let me see. 2 Okay. Sorry. This is the only copy I Q. I think so. If you want to go to --<sup>3</sup> have right now. A. Oh. THE WITNESS: Okay. Q. You got it. A. Yes. I see it now. Sorry. It was MS. AHERN: We can mark it, if you 5 <sup>6</sup> buried in Table 3, very small print. Okay. Yes. 6 want. So Table 3, years of use. Yup. BY MS. AHERN: Q. It's a copy of the Cramer 1999 Q. Do you see they're not showing a publication that you cited in your report in <sup>9</sup> statistically significant dose-response support of dose-response. relationship? 11 MR. TISI: Are you marking it? 11 A. So for less than 20 years, the 12 THE COURT: I can if you want me to. I 12 confidence intervals were 1.16 to 3; at 20 and 30 13 just didn't want to mark my copy. and greater than 30, they did -- the confidence 14 MR. KLATT: I don't think I do. intervals did include the null. 15 MS. AHERN: That's all right. I don't. But, again, I don't know how many -- I can't <sup>16</sup> We'll mark Cramer -- oops, no, we won't because remember. Oh, here are the cases. <sup>17</sup> this is the wrong study. Sorry. The old "wrong Yeah. So there are 55, less than 20 cases; study" trick. thirty-two 20 to 30; and 59 greater than 30. 19 19 THE WITNESS: I can't find that Q. And you see also the frequency <sup>20</sup> analysis? It also did not find a significant <sup>20</sup> information. Oh, I've got the wrong reference. Sorry. All righty. dose-response relationship as a statistically 22 significant dose-response relationship? (Article entitled "Genital Talc 23 Exposure and Risk of Ovarian Cancer" marked A. Yes. For less than 30 years, the 24 Exhibit 21.) <sup>24</sup> adjusted OR was 2.21 with a confidence interval <sup>25</sup> of 1.37 to 3.56. 25 Page 267 Page 269 The 30 to 39 was adjusted OR of 1.17 with <sup>1</sup> BY MS. AHERN: Q. Okay. So, Doctor, this is Exhibit 21,

<sup>3</sup> which is "Genital Talc Exposure and Risk of

<sup>4</sup> Ovarian Cancer," Dan Cramer, 1999.

5 A. Okay.

6 Q. This is something else.

Can you find -- I don't have it in front of

me, so I'm going to rely on you to find the

tables that show their dose-response analysis. 9

10 MR. ROTMAN: You made that Exhibit 21?

11 MS. AHERN: Yes.

12 MR. TISI: It's 21. Yes.

13 THE WITNESS: Would that be Table 2,

<sup>14</sup> what you're referring to (indicating)?

15 BY MS. AHERN:

16

Q. I believe the numbers were -- they were

17 looked at in terms of zero years' duration, less

<sup>18</sup> than 20, 20 to 30, and greater than 30.

19 Do you see that on there?

A. I'm looking. This one says "less 20

21 than -- frequency of use."

Q. There's a frequency and a duration. 22

23 A. Okay.

24 Q. Yeah.

25 A. Sorry. Why am I not seeing it? It's

confidence intervals .78 to 1.76.

And the 40-plus adjusted OR was 1.57 with

confidence intervals of 0.8 to 3.10.

Q. So not only did the point estimate go

down with more use, but the higher the

concentration, there was also no statistical

significance; correct?

A. Yeah. I mean, the numbers -- so the

only one that doesn't include the null -- let me

just double-check.

12 Actually, there are two. So the less than

20 years or less than 30 per month are

statistically significant.

15 Q. It's only the first dose category in

16 each group --17

A. Yeah.

18 Q. -- shows statistical significance.

19 And as the doses got higher, the exposure

frequency got higher, the point estimates went

down and statistical significance went away;

22 correct?

23 A. The confidence intervals did include

the null. And I think this illustrates how

<sup>25</sup> difficult sort of dose and frequency can be to

Page 272 Page 270 <sup>1</sup> study because we don't really know what the doses <sup>1</sup> "application of talc." <sup>2</sup> are, and we don't really have granularity as far "Another factor that may affect the <sup>3</sup> as frequency of use. Well, I have to look at --<sup>3</sup> dose-response relationship is whether use Q. These are studies that you cited in 4 occurred at a time when the female tract was <sup>5</sup> your report as evidence of a dose-response, open. There is evidence from several studies <sup>6</sup> correct, the Harlow and the Cramer papers? You <sup>6</sup> that the talc/ovarian cancer association is <sup>7</sup> both cited yourself. modified by closure of the female tract as a Did you evaluate the internal validity of result of tubal ligation or hysterectomy. <sup>9</sup> those studies and critically evaluate the methods Q. Doctor, did they say they didn't find a <sup>10</sup> and study populations when you included them in dose-response relationship? 11 your report? 11 A. I'm trying to find what they said other 12 than that on Page 355. 12 A. Let me -- well, I said -- this is the 13 13 sentence -- "Most have found an increased risk of Yeah. They said, "Studies that have <sup>14</sup> ovarian cancer with increased exposure." So, dose-response, including this one, have failed to 15 yet, when studies have evaluated duration of demonstrate consistent dose-response <sup>16</sup> frequency of perineal talc use. relationships." So this list is the studies that evaluated But it goes on to qualify with the <sup>18</sup> duration and frequency of perineal talc use. And difficulty of measuring dose and frequency, which <sup>19</sup> I said, "Most have found an increased risk." So is what I described earlier. 20 20 what I'm citing here are the studies that looked Q. Mm-hmm. 21 at duration and frequency. 21 (Article entitled "Perineal Talc 22 Q. Okay. And we were referring to 22 Exposure and Epithelial Ovarian Cancer Risk 23 in the Central Valley of California" marked <sup>23</sup> Cramer's 2007 publication where he himself says <sup>24</sup> that the association has been challenged because 24 Exhibit 22.) 25 25 it's weak and because there's no clear increase Page 271 Page 273 <sup>1</sup> in risk with duration of use. <sup>1</sup> BY MS. AHERN: And you didn't agree with that statement, O. Okay. The next one -- are you done, <sup>3</sup> and you referred me to Harlow 1992; correct? sorry, with that one? A. I was going to where I mentioned the A. If we're moving on, sure. <sup>5</sup> dose-response studies. Q. If you're done. Q. Okay. Just to button up and finish up The next one you mention, you cite in your <sup>7</sup> with Cramer 1999, if you look at Page 355, the report for dose-response is Mills 2004, which I'm authors included, "They failed to demonstrate handing you now marked as Exhibit 22. <sup>9</sup> consistent dose-response relationships with 9 Oh, yeah. We'll leave that here for right 10 measures of intensity of exposure." 10 now. 11 Do you see that? 11 A. Okay. 12 A. I'm sorry. Where are you? 12 MR. ROTMAN: Can I see the one you just 13 O. On Page 355. 13 finished with? A. Okay. I'm seeing "in attempting" --MR. TISI: This is 22; right? 15 sorry. I see, "Most talc and ovarian cancer 15 MS. AHERN: Yes, sir. <sup>16</sup> studies that have addressed dose-response, BY MS. AHERN:

17

25

<sup>17</sup> including this one, have failed to demonstrate

20 especially when the trend is examined among users

21 only. In attempting to address this weakness, we

<sup>23</sup> amount of powder actually used and degree of

18 consistent dose-response relationships with

19 measures of the intensity of the exposure,

22 point out that it is difficult to quantify the

Do you see that?

23 compared to never users. However, no

Q. And this one, you're welcome to read

through it if you want. All I wanted to point

abstract, a little more than midway down, they

22 1.37 with the confidence interval of 1.02 to 1.85

out is if you look right up front in the

21 say, "The odds ratio for ever use of talc was

- A. I see where it says that.
- Q. And if you want to look through there
- <sup>3</sup> and convince yourself of that, go for it. I
- 4 think the table that we're looking at is Table 2 <sup>5</sup> on Page 460.
- A. Yeah. The 4 to 12 years had an OR of
- <sup>7</sup> 1.86 that was statistically significant at 1.16
- 8 to 2.98. But the others, which were never --
- <sup>9</sup> which, of course, is the null, 4 to 12 years,
- <sup>10</sup> which -- oh, the 13 to 30 was adjusted OR of
- 11 1.45, confidence interval .9 to 2.32.
- And then the greater than 30 years was OR of
- 13 1.22 with confidence interval of .72 and 2.08.
- <sup>14</sup> So the 13 to 30 and the greater than 30 includes
- 15 the null.

1

- 16 And then if we look at frequency, cumulative
- <sup>17</sup> use, frequency types duration, there was a
- <sup>18</sup> statistically significant increase with second
- <sup>19</sup> quartile and third quartile divisions. But then
- <sup>20</sup> it dropped in the fourth quartile, the highest
- <sup>21</sup> exposure.
- 22 And, you know, again, sort of difficulty in
- 23 measuring this. But you do see an increase in
- <sup>24</sup> the second and third quartile, between the second
- <sup>25</sup> and third, that was statistically significant.

- <sup>1</sup> And then --
- Q. But the authors themselves interpret
- <sup>3</sup> their data as no dose-response association;
- 4 correct?
- A. In the abstract, that's what they
- <sup>6</sup> state. I'm trying to figure out what their --
- <sup>7</sup> what they said. They must have said a little bit
- <sup>8</sup> more.
- 9 Q. Doctor, you reviewed this study before;
- 10 right?
- 11 A. I did. Yes.
- 12 Q. Okay.
- 13 A. I'm just refreshing my memory.
- 14 Q. Okay. If you look at Page 463.
- 15 MR. ROTMAN: Are you changing the
- 16 topic?
- 17 MS. AHERN: No. Same topic.
- 18 MR. ROTMAN: She was looking for
- something as part of a prior answer.
- BY MS. AHERN:
- 21 Q. As part of your prior answer that there
- <sup>22</sup> was no dose-response?
- 23 A. As part of the answer that they stated
- <sup>24</sup> that in the abstract. I was trying to find out
- <sup>25</sup> where they had a discussion.

- Q. I was trying to point you a little bit
  - <sup>2</sup> toward this. It's Page 463. There's some
  - <sup>3</sup> discussion of it.
  - If you look at the third paragraph down, "As
  - <sup>5</sup> in other studies, the present study did not find
  - <sup>6</sup> a clear dose-response based on duration of use or
  - cumulative use."
  - And then it says, "Limiting the analysis of
  - dose-response to women who reported ever use of
  - <sup>10</sup> talc did not affect the results, data not shown.
  - 11 The lack of dose-response between talc use and
  - <sup>12</sup> epithelial ovarian cancer may be explained by the
  - 13 inability to quantify the actual amount of talc
  - <sup>14</sup> used per application and the timing of the
  - application."
    - A. Yeah. So with that caveat.
  - 17 Q. Well, the findings are what they are;
  - 18 right?

16

- 19 The findings are no dose-response
- 20 relationship?
- A. The findings are what they are. But,
- again, it's not an easy -- there's not huge
- numbers in these cases.
  - And, again, you still don't know from woman

Page 277

- 25 to woman what one dose is, so there's a ton of
- Page 275
- <sup>1</sup> variability. It's not like a cigarette, where,
- <sup>2</sup> you know, from one cigarette to the next or, you
- 3 know, a drug dose is probably a more accurate
- <sup>4</sup> analogy, you know.
- Q. True. But just because it's difficult
- 6 to study, it doesn't mean if we could study it
- better, we would get a positive result, does it?
- A. I -- oh, my thing is not working. I
- think I have to plug my thing in.
  - MR. ROTMAN: Can you?
- 11 COURT REPORTER: I'd have to break to
- 12 do it.

10

- MR. ROTMAN: Let's go off the record.
- THE VIDEOGRAPHER: Off the record.
- 15 4:37 p.m.
- 16 (A recess was taken.)
- 17 THE VIDEOGRAPHER: Back on the record,
- <sup>18</sup> 4:44 p.m.
- 19 BY MS. AHERN:
- Q. Okay. Doctor, you saw the Mills paper
- 21 in front of you?
- 22 A. Yes.
- 23 Q. Okay. Could you look at your report on
- 24 Page 21?
- 25 (Witness complies.)

<sup>1</sup> A. Okay.

- Q. Let's see, where is my copy?
- And turn to Page 3 of the Mills publication.
- 4 A. Page 3, which would be Page 460?
- <sup>5</sup> Q. That's a good question.
- Where is my Mills publication?
- MS. AHERN: Do you have it?
- 8 MR. TISI: Sure.
- 9 MS. AHERN: Thank you.
- Oh, I know where it is.
- 11 BY MS. AHERN:
- Q. I'm sorry. I thought I had the
- 13 specific passage marked. And I do, somewhere in
- <sup>14</sup> here. Okay. Sorry. It's on Page 460. I
- <sup>15</sup> apologize.
- 16 A. Okay.
- Q. All right. Do you see on the Mills
- <sup>18</sup> publication on Page 460 that bottom paragraph on
- <sup>19</sup> the left, "ever use of talcum powder"?
- <sup>20</sup> A. Yes.
- Q. And if you read down toward the bottom
- <sup>22</sup> part of that paragraph, on the fourth line from
- 23 the bottom, the sentence starts "Duration of
- 24 use."
- A. Okay.

Page 279

- Q. "Duration of use of talcum powder was
- <sup>2</sup> associated with increased risk, although the
- <sup>3</sup> pattern was also not clear-cut in that the point
- <sup>4</sup> estimate peaked among those reporting 4 to 12
- <sup>5</sup> years of use and declined somewhat among those
- <sup>6</sup> reporting longer duration of use."
  - Do you see that statement?
- <sup>8</sup> A. I see that. Yup.
- <sup>9</sup> Q. And if you look at your report on
- $^{10}\,$  Page 21, the top paragraph, about midway, a
- 11 little -- well, a third of the way down, you pick
- 12 up with "Duration of use of talc was also
- <sup>13</sup> associated with increased risk, although the risk
- 14 peaked."
- Do you see that statement?
- <sup>16</sup> A. Yes.
- Q. If you compare those statements, are
- 18 they almost identical with the exception of the
- 19 statement by Mills that the pattern was not
- 20 clear-cut?
- A. They are similar. This might have
- <sup>22</sup> been, like I described earlier, where, if I was
- <sup>23</sup> taking notes, some of the language might have
- <sup>24</sup> gotten incorporated, although I do have the
- <sup>25</sup> citation.

- Q. Is there a reason that that entire
- <sup>2</sup> portion of your report is copied identically from

Page 280

- <sup>3</sup> Mills except for the qualifier that the pattern
- <sup>4</sup> was not clear-cut for dose-response?
- <sup>5</sup> A. Well, I think it still has the same
- <sup>6</sup> meaning.
  - Q. Without the qualifier?
- 8 A. I think the qualifier is in the -- in
- <sup>9</sup> the data.
- O. Okay.
- A. I don't think I was -- I wasn't trying
  - 2 to make it sound anything different than what it
  - was. I think I was trying to report the data.
  - Q. Okay. All right. And, Doctor, if you
- <sup>5</sup> turn to Page 10 of your report, the section on
- <sup>16</sup> inflammation.
- 17 Are you there?
  - A. Yes.

18

21

- Q. You start on the second paragraph under
- <sup>20</sup> "Inflammation" discussing oxidative stress.
  - A. Okav.
- Q. Okay. Were you aware that a
- 23 significant amount of the section of your report
- <sup>24</sup> on oxidative stress is copied verbatim? More
- 25 than 60 percent of it, I think, is copied
  - Page 281
- vas 1 verbatim from Dr. Saed's 2018 publication?
  - A. Again, if the language is similar, it
  - <sup>3</sup> was not an intentional. I am citing him here, so
  - <sup>4</sup> it's -- you know, it's clear that those are the
  - 5 G you know, it's clear that those are the
  - <sup>5</sup> references. Again, it might have been due to
  - <sup>6</sup> note-taking, but the citation is clear.
  - Q. Do you ever take verbatim language out
  - <sup>8</sup> of another scientist's work and not set it off in
  - <sup>9</sup> quotation marks in your professional work?
    - A. I think I've cited the source here.
  - 11 It's -- so it's not -- again, it's not like I was
  - intentionally copying his words. It was, again,
  - probably an editing while I was taking notes, but
  - the citations are clear.
  - <sup>5</sup> O. Is your -- is the underlying
  - <sup>16</sup> understanding that you have related to oxidative
  - stress and inflammation drawn primarily from
  - <sup>18</sup> Dr. Saed's work?
  - A. No. I mean, oxidative stress and
  - <sup>20</sup> inflammation is something that we study -- that
  - <sup>21</sup> I've studied.

- Q. Have you ever published a study on
- oxidative stress or redox biology?

  A. I have not published on oxidative
- <sup>25</sup> stress.

Q. What sort of work as a pathologist have you done that incorporates redox biology?

A. Well, again, this is part of our
 medical training. Certainly in training to be a
 physician, that is something that we learn. And,
 you know, pathologists do quite frequently come

across inflammatory -- inflammation literature.

Q. Are you -- is it your position that the
 information in your report under "Inflammation"
 that discusses oxidative stress and redox biology
 is common knowledge among pathologists?

A. That oxidative stress and inflammation,
yes. I think -- yes. I think that's widely
accepted.

The specific information contained on

Q. The specific information contained on Pages 10 and 11 of your report that was drawn from Dr. Saed's work, is that information that is common knowledge?

The specific enzymes that are discussed, the research on these issues, is that specific information there common knowledge?

A. It's common knowledge that these types of cancer are associated with inflammation, and certainly oxidative stress is part of inflammation.

282 Page 284

<sup>1</sup> A. I did attribute -- I certainly cited

him in several places in this area. And, again,
 it was not an intentional copying. Again, it

4 might have just happened with my editing, but I

<sup>5</sup> certainly tried to cite everything that I was

<sup>6</sup> looking at in the proper place.

But I do believe that it's common knowledge that chronic inflammation can cause different types of cancer. This is not really new data.

Q. Dr. Saed says that it's new data.

A. In what respect, though? If we're talking about myeloperoxidase, yes. But I'm talking about oxidative stress and chronic inflammation with known association with certain types of cancer.

Q. So it's your testimony that the
 verbatim text that you used in the section from
 Dr. Saed's 2018 paper was appropriately cited and
 attributed to him?

MR. ROTMAN: Objection.

A. Again, I'm not sure it's absolutely verbatim, but I certainly cited him in every place that I was referencing.

Q. Okay. We'll just move on.
 (Highlighted copy of Dr. Kane's

Page 283

Q. Was this common knowledge to you before you reviewed Dr. Saed's 2018 publication?

A. Yes. I was just citing his report at this point.

Q. Are you aware you also cited his underlying citations in the same spots that he cited them?

A. That's possible because I reviewed his citations as I was reading his citations.

Q. Did Dr. Saed give you permission to copy his -- the language from his publication?

A. I wouldn't characterize it as"copying." I think it may be similar language,

<sup>14</sup> again, because I was writing as I was reading.

But I am certainly clearly citing his work andthe other citations.

Q. Do you agree that Dr. Saed's 2018
 paper is a compilation of his own synthesis and

review of the underlying articles that heincorporated into his paper, and do you think

21 it's appropriate for you to just lift the

<sup>22</sup> language from his paper and the citations that he

23 found and synthesized and put it in your report

and not attribute it to him with quotation marks?
 MR. ROTMAN: Objection.

expert report marked Exhibit 23.)

<sup>2</sup> BY MS. AHERN:

Q. Doctor, I've marked as Exhibit 23 to
 your deposition a highlighted copy of your report

Page 285

5 that shows the verbatim text that has been

6 carried over from various publications into your
 7 report.

If you turn to Page 10 and 11, you'll see
that the highlighted portions are copied directly

from Dr. Saed's work.

MR. ROTMAN: Do you have a copy for me to this exhibit?

MS. AHERN: Oh. I do. Sorry about that.

MR. ROTMAN: So we're at Page 10 and 16 11?

MS. AHERN: That's just for the Saed publication. And there's one in there that Saed was also on.

MR. ROTMAN: Does she have the Saed publication in front of her?

MS. AHERN: I can find it for you.

23 BY MS. AHERN:

Q. But my point is, are you aware that that -- that there's a significant portion of

<sup>1</sup> that section of your report that is just

<sup>2</sup> cut-and-pasted from Dr. Saed's work?

A. I don't believe -- again, it's -- it

4 wasn't intentional with the citations, and it

<sup>5</sup> could have happened with my note-taking or other

<sup>6</sup> suggested input. But, again, I cited -- I

<sup>7</sup> certainly cited him in that section.

<sup>8</sup> Q. Okay.

MR. TISI: Did you mark that?

MS. AHERN: Hmm?

MR. TISI: Did you mark that as an

12 exhibit?

MS. AHERN: Yes. I think it's 23.

<sup>14</sup> Sorry.

9

MR. TISI: That's okay.

MR. ROTMAN: Do you have the Saed in

17 front of you?

18 BY MS. AHERN:

Q. I think it's -- it wasn't intentional

<sup>20</sup> is your testimony, and it's probably just a

<sup>21</sup> result of your note-taking process; is that

22 correct?

A. Well, because I cited him specifically,

<sup>24</sup> certainly it wasn't intentional to be verbatim.

<sup>25</sup> And I'm not sure exactly the process, but

<sup>1</sup> biology and inflammation, are you?

A. I am not currently participating in a

<sup>3</sup> study of oxidative stress or redox biology.

Q. You don't have any funding related to

<sup>5</sup> oxidative stress and inflammation, do you?

A. No, I do not.

Q. Have you ever applied for any funding

8 in that area?

A. No. I have not.

Q. Have you ever authored a systematic

11 review of the literature on oxidative stress and

inflammation?

A. Oxidative stress and inflammation, no.

<sup>14</sup> I don't believe I have.

<sup>5</sup> Q. Have you ever authored a systematic

16 review of the literature on oxidative stress and

<sup>17</sup> cancer?

A. No. I have not authored a systematic

<sup>19</sup> review on that.

Q. Okay. Doctor, moving on to

<sup>21</sup> inflammation and ovarian cancer.

Generally, on inflammation, can you cite to

<sup>23</sup> a published experiment that was conducted in

<sup>24</sup> animals in vivo that establishes a role of any

<sup>25</sup> particular inflammatory cell or cytokine or

Page 287

<sup>1</sup> certainly I'm citing him several times there.

<sup>2</sup> Q. Okay. That's fine. We'll just move <sup>3</sup> on.

And, Doctor, just to be clear, I understand

<sup>5</sup> your testimony is that it is common knowledge to

<sup>6</sup> pathologists that oxidative stress and

<sup>7</sup> inflammation are related; correct?

8 A. Yes.

<sup>9</sup> Q. Okay. But you are -- we're talking

about oxidative stress and redox biology

<sup>11</sup> specifically as a field of study or research.

You're not an expert in that field of study

13 or research, are you?

A. I certainly have read literature in

15 that area.

16

Q. Does that make you an expert?

A. I'm -- I mean, I'm familiar with

18 literature in the area. That's -- that's my

<sup>19</sup> answer.

Q. Okay. But you don't conduct studies in

<sup>21</sup> oxidative stress and redox biology, do you?

A. I do not conduct studies in oxidative

23 stress and redox biology.

Q. You're not currently participating in a

25 study looking at oxidative stress or redox

Page 289

Page 288

<sup>1</sup> enzyme in tumor regenesis?

A. Oh. Let me -- let me bring up my

<sup>3</sup> inflammation section. Sorry. I'm just

<sup>4</sup> refreshing myself as to what I stated in my

<sup>5</sup> report.

6 Oh, this is low battery again. I don't

<sup>7</sup> think this is plugged in.

8 MR. ROTMAN: Can we take five minutes

<sup>9</sup> off the record?

MS. AHERN: Yes.

11 THE VIDEOGRAPHER: Off the record,

<sup>12</sup> 5:02 p.m.

10

17

19

22

(A recess was taken.)

4 THE VIDEOGRAPHER: Here begins Media

No. 6 in today's deposition of Sarah Kane, M.D.

Back on the record, 5:28 p.m.

(Article entitled "Talcum

powder, chronic pelvic inflammation and

NSAIDs in relation to risk of epithelial

ovarian cancer" marked Exhibit 24.)

21 BY MS. AHERN:

Q. Dr. Kane, I'm marking what's been --

<sup>23</sup> well, I'm marking Exhibit 24 to your deposition,

which is a copy of the Merritt 2008 publication.

<sup>25</sup> And I'm sorry, I don't have an extra. I'm going

- <sup>1</sup> to share.
- It's "Talcum powder, chronic pelvic
- <sup>3</sup> inflammatory -- sorry, chronic pelvic
- 4 inflammation and NSAIDs in relation to risk of
- <sup>5</sup> epithelial ovarian cancer."
- And you cite Dr. Merritt's paper a couple of
- times in your report; is that correct?
- A. I believe I cited it, yes.
- 9 Q. I think you cite it as a statistically
- 10 significant positive talc study on Page 17 of 11
- your report?
- 12 A. Oh, let me get to that, if that's the
- <sup>13</sup> section I'm thinking of.
- 14 Q. There are a couple of places?
- 15 A. There was -- yes. This happened in
- <sup>16</sup> editing. I believe if this is -- so the sentence
- ended up, it originally didn't have the
- 18 "statistically significant." It was just, you
- 19 know, an odds ratio greater than one and listed.
- And then I mistakenly didn't delete. When I
- 21 changed it to "statistically significant," for
- 22 some reason -- I don't know if it happened in the
- 23 editing between additions or something -- somehow
- <sup>24</sup> I seem to remember deleting them. But in the
- 25 final, they ended up all there. So that was a --

- <sup>1</sup> of multiple publications.
  - A. Right.
- Q. You're saying that some of those
- publications shouldn't be in there because you

Page 292

Page 293

- added "statistically significant" as a criteria
- later?
- A. Exactly.
- Q. Okay. That's actually not my question
- about Merritt, but thank you.
  - A. I knew that was going to come up --
- 11 Q. That's okay.
- 12 A. -- at some point.
- 13 Q. While we're there, since we're sitting
- <sup>14</sup> here looking at this, so these are -- you listed
- out case-control studies addressing talc, and
- they're supposed to be those that have
- statistically significant odds ratios; correct?
  - A. That's correct. That was the
- 19 intention.
- 20 Q. And Gertig 2000 is there, and Houghton
- 2014 are there, and they're obviously cohort
- studies?
- 23 A. So, again, I think that somehow that
- paragraph got all -- and I didn't catch it in the
- <sup>25</sup> final edits.

Page 291

- MR. ROTMAN: What page was this?
- 2 A. -- typographical error.
- It's in there twice. I noticed it after I
- 4 submitted it, and it was one of those --
- Q. Are you saying Merritt is not
- <sup>6</sup> statistically significant?
- A. So I know which -- again, I'd have -- I
- 8 have to go through. It's been a long day, and
- <sup>9</sup> the names are starting to get all confused.
  - Q. Yeah.

1

10

16

- 11 A. But I know that that sentence, with
- 12 "all of those" at the end of that sentence, is
- 13 incorrect because I had changed -- I had meant to
- 14 list cumulatively the statistically significant
- 15 ones and ended up --
  - Q. Okay. So just to clarify for the
- 17 record, on Page 17, we're talking about the first
- <sup>18</sup> full paragraph that says, "In addition to the
- <sup>19</sup> Cramer 1982 study, numerous other case-control
- <sup>20</sup> studies addressing talc use and ovarian cancer
- <sup>21</sup> have shown statistically significant odds ratios
- <sup>22</sup> greater than one indicating talc use is
- <sup>23</sup> associated with an increased ovarian cancer
- 24 risk."
- 25 And then there's a string cite with a number

- Q. Okay.
- A. I know that that was at least a
- <sup>3</sup> different paragraph at first, possibly two
- paragraphs that got condensed. And then somehow,
- the references didn't get changed in the final.
- Q. Okay. Do you happen to know -- and if
- you don't it's okay -- but do you happen to know
- which of these studies should be there and which
- should be removed?
- A. Off -- I would want to look just to
- 11 make sure.

- 12 Q. Okay.
- A. But I'm -- if I am -- I'd want to look
- just to make sure, but I know there are some that
- should not be there.
  - Q. All right. But looking at Merritt,
- there are a couple of places where Merritt is
- cited in your report. One is Page 17 in that
- paragraph we just looked at. Another is Page 28
- 20 in Section -- the "Pooled study regarding talc
- 21 use and ovarian cancer" section.
- It says some -- let's see, you're talking
- <sup>23</sup> about the advantages of pooled studies, and you
- 24 cited Merritt 2008.
- 25 A. Okay.

Page 294 Q. And then on Page 35, Merritt is cited.

- <sup>2</sup> "Studies evaluating duration and frequency of
- <sup>3</sup> perineal use, most have found an increased risk
- <sup>4</sup> of ovarian cancer with increased exposure."
- We already went through this paragraph
- 6 earlier --
  - A. Yeah. Yeah. Q. -- and discussed Merritt a little bit
- in that context.
- MR. ROTMAN: Page 30 -- the last one
- 11 was Page 35?
- 12 MS. AHERN: Thirty-five. Yeah. I
- <sup>13</sup> apologize. We may not have discussed Merritt.
- 14 BY MS. AHERN:
  - Q. But looking at Merritt now, you're
- <sup>16</sup> aware that Merritt looked specifically at
- <sup>17</sup> inflammatory conditions as part of their
- <sup>18</sup> exploration of the hypothesis that chronic
- 19 inflammation could lead to ovarian cancer; is
- 20 that right?
- 21 A. Yes. There was a component from what I
- <sup>22</sup> remember.
- 23 Q. They say in the abstract that "Chronic
- <sup>24</sup> inflammation has been proposed as the possible
- causal mechanism that explains the observed
  - Page 295
- <sup>1</sup> association between certain risk factors such as
- <sup>2</sup> the use of talcum powder or talc in the pelvic
- <sup>3</sup> region and epithelial ovarian cancer."
- Do you see that? It's in the abstract, the
- <sup>5</sup> first sentence?
- A. Yeah. Okay. The first sentence.
- Q. Okay. They go on to say, "To address
- the issue, we evaluated the potential role of
- chronic local ovarian inflammation in the
- <sup>10</sup> development of the major subtypes of epithelial
- <sup>11</sup> ovarian cancer."
- 12 Do you see that?
- 13 A. Yes.
- Q. Okay. And just want to ask you: They
- <sup>15</sup> conducted the study as a case-control study
- looking at 2319 women with epithelial ovarian
- 17 cancer; correct?
- 18 A. I don't remember the exact number, but
- 19 I will -- I will --

20

- Q. I think that's -- that's okay.
- 21 A. I don't remember the exact number.
  - Q. Okay. So they looked at a number of
- <sup>23</sup> factors that are theoretically associated with
- chronic inflammation, didn't they, including
- pelvic inflammatory disease and talc use,

- <sup>1</sup> endometriosis.
- And do you see if you turn to -- I'm trying
- <sup>3</sup> to get through this quickly. You're welcome to
- point out anything you want, but I kind of want
- <sup>5</sup> to move us along.
  - A. Okav.
- Q. If you look at the "Discussion"
- section, I, unless I missed it, on Page 174, the
- right-hand column, second full paragraph, they
- note that "It has been hypothesized that talc is
- linked to ovarian cancer development through
- 12 inflammation. However, evidence linking an
- 13 inflammatory response with talc contamination of
- 14 the ovaries is lacking."
- Do you agree or disagree with that statement
- that evidence linking an inflammatory response
- with talc contamination of the ovaries is
- lacking?
- 19 A. I don't know if I would phrase it that
- <sup>20</sup> way. Have there been studies that have followed
- talc from application up to the ovaries and
- <sup>22</sup> documenting an inflammatory response after talc?
- No. There's not going to be that study.
- That would be -- I don't think you could do
- 25 that study today with talc being called by the
- Page 297

Page 296

- <sup>1</sup> IARC a possible carcinogen. I don't think you
- <sup>2</sup> could design that study right now and do that in
- <sup>3</sup> women.
- But, again, I think -- I think it's still a
- <sup>5</sup> highly compelling, plausible mechanism because we
- 6 know talc can cause inflammation, and
- inflammation is associated with certain cancers,
- including certain types of ovarian cancers.
- 9 So I don't know if I would state it that
- 10 way.
- 11 Q. When you say inflammation is associated
- 12 with ovarian cancer, what studies are you
- 13 referring to?
- A. I'm referring to, for example, clear
- cell carcinomas that have arisen from
- endometriotic lesions that we've talked about
- <sup>17</sup> before.
- 18 Q. And those cells are -- the originating
- cells are thought to come from the endometrium
- 20 itself, the uterus; correct?
- 21 A. I don't know if we know for sure. I
- 22 mean, is it endometriosis that's in the ovary
- causing chronic inflammation in the ovarian cells
- that are causing the clear cell? I don't know if
- that's been completely delineated.

- 1 O. But there are markers that will
- <sup>2</sup> distinguish ovarian surface epithelial cells from
- <sup>3</sup> endometrioid cells which resemble endometrial
- 4 cells: correct?
- A. There are some stains that you can do.
- 6 But, again, I don't know if it's going to be --
- been completely elucidated.
- Q. Are you aware of recent studies that
- <sup>9</sup> have demonstrated that there is some abnormality
- 10 in the endometrium of women who develop
- 11 endometriosis when compared to women who don't
- 12 develop endometriosis?
- 13 A. I'm aware that retrograde migration of
- 14 the endometrium is thought to -- has been
- 15 associated with endometriosis. I don't know what
- 16 you mean by "abnormalities" of the -- you have to
- <sup>17</sup> be more specific. I can't --
- Q. I don't have the publication with me.
- 19 I was just asking if you were aware of those
- <sup>20</sup> studies.
- 21 A. I probably read them at some point, but
- 22 off the top of my head, I'm not really sure
- without knowing more specifically.
- Q. And would you agree that the studies,
- though, that show a decreased risk of ovarian

<sup>1</sup> inflammatory mechanism in the development of

Page 300

- <sup>2</sup> epithelial ovarian cancer. However, experimental
- <sup>3</sup> evidence that perineal talc use elicits an
- 4 inflammatory response in the ovaries is lacking,
- <sup>5</sup> and overall, we conclude that chronic
- <sup>6</sup> inflammation does not play a major role in
- development of ovarian cancer."
- Is there a reason you didn't cite the
- Merritt study in your report specifically when
- discussing evidence of chronic inflammation and
- ovarian cancer, a link between those two?
  - A. In the places that I -- let me just
- 13 double-check. Places that I mention, was I
- not -- I wasn't talking about inflammation. Is
- that what you're --
- 16 Q. Yes. You agree you cited Merritt in
- several places in your report?
  - A. Yes.

12

- 19 O. But you didn't cite anything about the
- inflammation findings from Merritt.
  - A. I'm not sure I can completely agree
- with their conclusion. It's true we don't
- have -- like I mentioned before, we don't have a
- study that has looked at women who use talc,
- <sup>25</sup> follow it up, and then see chronic inflammation

Page 299

- <sup>1</sup> cancer for women who have tubal ligation are
- <sup>2</sup> studies -- well, are more highly associated with
- <sup>3</sup> endometrioid clear cell carcinomas than with
- <sup>4</sup> high-grade serous?
- A. With tubal ligation, off the top of my
- 6 head, I believe that's -- that that's the case.
- But with salpingectomy, which removes the
- <sup>8</sup> fallopian tube fimbriae, there's -- that
- decreases the risk of serous carcinomas.
  - Q. To a lesser extent, then, the decrease
- 11 for clear cell and endometrioid, which some
- 12 people have suggested supports the retrograde
- 13 migration of endometrial cells into the abdominal
- 14 cavity?

10

- A. Some people have said that that
- <sup>16</sup> supports the retrograde migration of the
- 17 endometrial cells. That is correct.
- Q. And I got off topic. We're looking at
- 19 Merritt. Page 174, if you look, let's see --
- <sup>20</sup> here it is. Sorry. I apologize, on Page 175.
- The very bottom of the summary paragraph, it
- 22 says, "The elevation in ovarian cancer risk
- 23 associated with use of talc in the perineal
- <sup>24</sup> region that we and others have observed has been
- <sup>25</sup> regarded as the main evidence supporting an

- Page 301 <sup>1</sup> in the ovary.
- But I think that's going to be -- again, we
- <sup>3</sup> don't know how long that chronic inflammation is going to be there. We don't know what dose is
- getting into the ovary.
- I still think -- and, again, this is the
- plausibility part of it -- I think there's still
- compelling evidence that talc can cause an
- inflammatory response that would explain the risk
- of increased risk of ovarian cancer with talcum
- 11 powder products.
- 12 So, I mean, I certainly read this. It had
- 13 some good information in it. I don't think I was
- purposely trying to leave out something that had
- evidence. This was their opinion.
- 16 And I'm -- I don't know if I would phrase it that way, the exact words that they use.
- Q. Well, if those are exactly their
- findings here -- if you look at the top of the
- summary paragraph, "In summary, most factors that
- could potentially cause ovarian inflammation such
- as pelvic inflammatory disease, HPV infection,
- and postpubertal mumps were not associated with a
- significant elevation in ovarian cancer risk in
  - our study. In addition, the expected corollary,

- $^{\scriptsize 1}\,$  an inverse association with regular use of
- <sup>2</sup> anti-inflammatory medications, was also not
- <sup>3</sup> observed -- or was not observed."
- A. Yes. Yeah. Yeah.
- <sup>5</sup> Q. They looked at multiple sources or
- <sup>6</sup> multiple causes of inflammation in the pelvic
- <sup>7</sup> region and did not find an association with the
- <sup>8</sup> risk of ovarian cancer, and they didn't find a
- <sup>9</sup> decreased risk in people that used
- o inflammatory -- anti-inflammatory medications.
- <sup>11</sup> A. I think I mentioned --
- <sup>12</sup> Q. So this is an inflammation study, isn't <sup>13</sup> it?
- A. Yeah. I think I mentioned in -- about
- 15 NSAIDs that I might have cited them in that
- section, that the evidence was not consistent
- <sup>17</sup> with NSAIDs, if I remember correctly.
  - I definitely looked at this paper when I was
- 19 looking at NSAID and aspirin use and certainly
- <sup>20</sup> inflammation as well. So...
- Q. It's actually not cited anywhere with
- <sup>22</sup> NSAID use or regarding inflammation at all.
- So maybe it was an earlier draft and was
- <sup>24</sup> removed at some point?
- A. It's possible.

Page 303

- Q. And you also -- you cite -- you do cite
- <sup>2</sup> some of the NSAID studies and aspirin studies,
- <sup>3</sup> but you leave out others. You leave out Baandrup
- 4 2013, which was a negative study; Bonovas, 2005,
- <sup>5</sup> which was a negative study; Ni, 2012, which was a
- 6 negative study.
- When you did your review of inflammation
- 8 including anti-inflammatory medications and the
- <sup>9</sup> risk of ovarian cancer, did you pull out more
- 10 studies in review than you actually included in
- 11 your report?
- 12 A. Yes. There are definitely more studies
- <sup>13</sup> than were cited in my report.
- Q. Is there a reason you didn't cite the
- 15 negative studies?
  - A. I didn't intentionally leave out the
- negative studies, but I do mention that the
- <sup>18</sup> evidence had been inconsistent with NSAID.
- Q. Okay. And you mentioned the Heller
- 20 study in a couple of places. You mentioned
- 21 several times that part of your plausibility
- 22 opinions involve the fact that talc has been
- 23 observed in the ovaries; correct?
- A. Can you show me? I'm sorry. I just
- <sup>25</sup> want to make sure.

- <sup>1</sup> Q. I'm sorry. I'm just referring
- <sup>2</sup> generally.
- Do your opinions, in part, depend on the
- 4 finding of talc in ovaries?
- 5 A. No. Because I think, again, it's
- <sup>6</sup> difficult to find talc in the ovaries. So I
- <sup>7</sup> would not expect to see -- to find, to
- 8 histologically find talc in every ovary of a
- <sup>9</sup> woman who has used talcum powder products. I
- think that would be extremely difficult to do in
- 11 every patient.
- And I know we talked about the MUC-1 theory
- <sup>13</sup> earlier, but if that is the mechanism, that would
- 14 not require talc to get to the ovary.
  - So, no, I don't think it's necessary to find
- talc in the ovary in every woman to come --
- <sup>17</sup> that's a user.
  - Q. Let's talk about evidence for
- <sup>19</sup> talc-induced inflammation in the ovary.
- For instance, you've cited the Heller study
- 21 from 1996 in your "Migration translocation,
- <sup>22</sup> inhalation, and lymphatic transport" section on
- <sup>23</sup> Page 14.

25

- A. Mm-hmm.
  - Q. Heller actually states in their study

Page 305

Page 304

- <sup>1</sup> that they did not find on their H&E slides any
- <sup>2</sup> response -- any expected response to talc
- <sup>3</sup> particles.
  - Do you remember that?
    - A. I do remember that vaguely. Yes.
- 6 Q. Did any of the studies that you cite in
- <sup>7</sup> that section for the proposition that talc has
- <sup>8</sup> been found in ovarian tissue, did any of those
- <sup>9</sup> find a reaction to talc in the ovaries?
  - A. I don't believe the studies that have
- 11 found talc in the ovaries have all looked for
- 12 chronic inflammation. Some of them, if I'm
- 13 remembering correctly, I don't know if they all
- looked histologically; but the ones that did, I
- <sup>15</sup> don't believe they had mentioned finding chronic
- <sup>6</sup> inflammation near the talc particles.
- But again, you know, depending on how long
- that inflammatory response is going to be there, depending how long that particular talc particle
- has been there, you wouldn't necessarily expect
- 21 to still see it 20 years later.
  - Q. Okay. In the Heller study, they looked
- 23 at ovarian tissue -- ovaries from one of their
- <sup>24</sup> subjects who had 1.7 or approximately
  - 5 1.669 million particles per gram of wet weight by

1

4

6

7

15

21

Page 306 <sup>1</sup> electron microscopy and found on hematoxylin and

- <sup>2</sup> eosin stain slides from the analyzed sections of
- 3 the tissue that no evidence of response to talc
- 4 such as foreign body giant cell reactions or
- <sup>5</sup> fibrosis in the tissue.
- Is that consistent with the other studies
- that have reported findings from H&E have also
- 8 reported no response to talc or supposed talc
- they found? 9
- 10 What is an alternative explanation for how
- 11 microscopists doing these sorts of studies might
- 12 find talc by TEM or SEM without any histologic
- 13 response --
- 14 MR. ROTMAN: Objection.
- 15 Q. -- to talc in the tissue?
- 16 A. Well, I think I addressed that a little
- <sup>17</sup> earlier. Again, I don't know -- we don't know
- 18 how long a chronic inflammatory response would be
- 19 there after a particular talc particle lands on
- 20 the ovary.
- 21 But the important thing would be that that
- 22 chronic inflammation, the initial chronic
- 23 inflammation, whenever that may be, however long
- 24 it is there, causes oxidative stress that induces
- <sup>25</sup> an oncogenic change in an ovarian cell or

Page 307

- <sup>1</sup> fallopian tube cell, for that matter.
- So -- and these are very small studies that
- 3 looked at histologic -- that looked
- <sup>4</sup> histologically for talc in these ovaries.
- So, you know, I don't necessarily think -- I
- 6 don't think that you would have to find chronic
- <sup>7</sup> inflammation if you're looking at an ovary at a
- 8 particular point in time when we're talking about
- <sup>9</sup> long-term talc use from, you know, up to 20 years
- <sup>10</sup> ago or something.
- 11 Q. Well, if they're finding 1.7 million
- 12 particles per gram of wet tissue right then and
- 13 there, and their slides from that time period
- 14 don't show any response whatsoever to talc that
- 15 they would expect to see, what's an alternative
- <sup>16</sup> explanation?
- 17 A. An alternative explanation is that
- 18 there was chronic inflammation, and it has since
- 19 resolved.
- Q. How about there might be contamination
- 21 of their samples with talc, which is ubiquitous
- <sup>22</sup> in many laboratories?
- 23 A. I believe they -- I have to look at the
- 24 study to -- do you have the study?
- 25 MR. ROTMAN: Thank you. What number?

- Page 308 MS. AHERN: What number are we on?
- 2 COURT REPORTER: Twenty-five.
- 3 MS. AHERN: Twenty-five.
  - MR. TISI: So 24 was --
- 5 MS. AHERN: We'll wait.
  - (Article entitled "The
    - relationship between perineal cosmetic talc
- 8 usage and ovarian talc particle burden"
- 9 marked Exhibit 25.)
- A. I believe they went through standard
- electron microscopy methods, which controls for
- contamination.
- BY MS. AHERN:
- 14 Q. How?
  - A. I don't know if it goes through the
- whole -- but they're very careful in how they
- handle tissue before they prep for electron
- microscopy.
- Q. Doctor, do you know where they got the
- 20 tissue from?
  - A. Yeah. It's listed.
- 22 Q. Did they collect the tissue themselves
- <sup>23</sup> from the patient in a particulate-free
- environment and handle it with particulate-free
- gloves in containers, or did they get it from
  - Page 309
- 1 hospital paraffin-embedded tissue?
- If you look on Page 1508, "Ovarian tissue in
- <sup>3</sup> blocks was reparafinized, rehydrated, blotted dry
- and weighed, and then digested with reagents."
  - A. So I think these women were talc users.
- <sup>6</sup> I'm trying to find controls that they had ovaries
- from -- if I remember correctly, they had ovaries
- <sup>8</sup> from fetal cases that did not show talc, if I
- remember correctly. I'm trying to find that.
- Yeah. "In addition, the ovaries of two
- stillborn fetuses were analyzed as negative
- 12 controls."
- 13 Q. Does it say anything about where those
- stillborn fetus ovaries came from and if they
- <sup>15</sup> were handled in the same hospital in the same way
- that the parafinized blocks were handled?
- 17 A. If they didn't have a separate section
- of their methods how they handled it, it would be
- the same methodology.
- 20 Q. Well, assuming it's not contamination
- and there's still no reaction to talc, another
- alternative explanation might be that talc
- doesn't cause chronic inflammation in the
- 24 ovaries.

25

A. But they didn't find talc in their

<sup>1</sup> negative controls, which were fetal females that <sup>2</sup> would never have been exposed to talc.

O. Except for after the tissues were taken 4 from the fetuses and processed?

A. I'm just trying to find where they --6 what they did.

Q. What I wonder and what I don't think is 8 in the paper, unless you can find it, is an <sup>9</sup> explanation for how the fetal ovaries were

10 obtained and processed. 11 Did they come from the same hospital 12 system --

A. It would be the same.

13

21

14 Q. -- from the laboratory so that any <sup>15</sup> contamination that occurred to those tissues prior to the Heller group getting them was accounted for?

Or did they purchase them separately through a company or something else that handled them <sup>20</sup> differently from the hospital samples?

MR. ROTMAN: Objection.

22 A. If those were obtained differently, it 23 should have been in the methodology. So the fact 24 that it's not there, the next sentence after they

25 say, "In addition, the ovaries of two stillborn

<sup>1</sup> something that would happen over days. Chronic

Page 312

Page 313

<sup>2</sup> inflammation is generally longer, but it still

<sup>3</sup> resolves.

Q. And are -- for instance, pelvic

inflammatory disease is -- the effects of pelvic

<sup>6</sup> inflammatory disease can be seen by pathologists

for a very long time; correct?

A. You can see fibrosis. So...

Q. And one of the things that you

mentioned earlier is that talc can cause

11 fibrosis?

12 A. Talc can cause fibrosis. You get -- in

13 the ovary, however, you will get surface

fibrosis, generally, from the mesothelial cells

in the surface.

16 But, again, you're not always going to have fibrosis with chronic inflammation, either.

Q. If it's chronic inflammation that is

significant enough to lead to a transformative

event, shouldn't you expect to see some evidence

<sup>21</sup> of that chronic inflammation?

A. Well, we don't know how much chronic <sup>23</sup> inflammation is necessary to cause a carcinogenic effect.

Q. By analogy, wouldn't you look at

Page 311

<sup>1</sup> fetuses were analyzed as negative controls," that

<sup>2</sup> is where, if it had been a different methodology

<sup>3</sup> or different purchased ovarian cell blocks from

4 fetuses, which I have never -- anyway, it would

<sup>5</sup> be -- it would be there. And it's not.

Q. Hmm. So my next question is: I had <sup>7</sup> asked you earlier if there was an alternative

8 explanation for why there's no tissue response

<sup>9</sup> seen in this study to talc particles, and you

10 said it could be because the chronic inflammation

<sup>11</sup> was there and not there at the time that they

12 looked at the H&Es?

13 A. Yeah. I mean, you're looking at an 14 ovary at a very -- at one time point. So we

<sup>15</sup> don't know how long those talc particles were

16 there. We don't know if -- how long -- we don't

17 know how long the chronic inflammation is there.

But the important thing is that the chronic

19 inflammation would cause an event to change to an <sup>20</sup> oncogenic phenotype, gene type.

Q. So chronic inflammation is, by

22 definition, chronic; correct? Doesn't just -- it <sup>23</sup> doesn't just resolve in a couple of days.

24 It's ongoing; is that correct?

25 A. It is -- acute inflammation would be <sup>1</sup> something like ulcerative colitis and colon

<sup>2</sup> cancer since that seems to be a fairly

<sup>3</sup> well-established association?

A. Yes. And as soon as patients are

<sup>5</sup> diagnosed with ulcerative colitis and Crohn's

<sup>6</sup> disease, they are carefully followed at the

beginning. We don't wait 20 years to start

following them. We know that, you know, the risk

is there. As soon as they're diagnosed, we know

there is a risk for increased cancer, so we start

surveying them.

12 Q. But there's massive evidence of

13 inflammation -- tissue-damaging inflammation in

ulcerative colitis; correct?

A. Not always massive, but there's chronic 16 inflammation.

17 Q. Throughout the entire GI tract or

19 A. In -- it's not always the whole, but

yeah, there's chronic inflammation in the

<sup>21</sup> intestines.

22

25

Q. There's nothing in the literature that

suggests that talc causes that kind of an

inflammatory reaction, is there?

A. That talc causes a chronic

<sup>1</sup> inflammation?

- Q. That talc causes that sort of chronic
   inflammatory reaction.
- 4 A. Well, I showed you some excerpts where 5 they mention lymphocytic and plasmacytic
- 6 inflammation due to talc. We know that talc
- <sup>7</sup> causes an acute inflammation. I know we weren't
- 8 talking about acute inflammation, but we know it
- <sup>9</sup> causes acute inflammation in the -- after a
- $^{\mbox{\scriptsize 10}}\,$  pleurodesis. And I'm sure you could have
- 11 lymphocytes in plasma cells there too.
- Again, I don't think it's the -- sure. Theamount and duration of chronic inflammation, I
- mean, would that increase the risk? But even a
- small amount of chronic inflammation for a
- relatively short period of time, I think it'splausible.
- And, again, this is all under the plausible thing that this would cause a mutagenic effect.
- Q. Can you name other chronic inflammatory conditions that are not associated with cancer?
- 22 A. Chronic inflammatory conditions that
- <sup>23</sup> are not associated with cancer? Well, I'm not
- <sup>24</sup> sure we absolutely know every -- that a chronic
- <sup>25</sup> inflammatory condition won't cause a cancer,

Page 315

25

- $^{1}\,$  but -- so I'm not really sure. I'm not really
- <sup>2</sup> sure what you're getting at.
- Q. Can you list five chronic inflammatory conditions?
- A. That don't cause --
- Q. Just list five chronic inflammatory
   7 conditions.
- 8 A. Well, we have rheumatoid arthritis that
- <sup>9</sup> increases risk of lymphomas. We have
- <sup>10</sup> Helicobacter pylori infections that increase
- 11 gastric cancer. We have the ulcerative colitis,
- 12 Crohn's disease, that increase the risk of
- <sup>13</sup> cancer. Agent exposures like asbestos that
- <sup>14</sup> causes chronic inflammation and causes cancer.
- <sup>15</sup> HPV infection causes cancer. I mean...
- Q. Can you name one that doesn't involve a virus or an underlying immune dysfunction?
- <sup>18</sup> A. I named asbestos.
- <sup>19</sup> Q. Asbestos.
- 20 And was there another?
- A. Again, I don't know if we have all the
- <sup>22</sup> data on potential carcinogens and whether or not
- <sup>23</sup> they cause chronic inflammation for sure. I
- <sup>24</sup> think that, you know, we're still getting that
- <sup>25</sup> data.

Page 316

- Q. Have you ever diagnosed a patient with a talc-related ovarian cancer?
- <sup>3</sup> A. It's entirely possible that I have, but
- <sup>4</sup> I have not used polarized light microscopy on
- <sup>5</sup> ovarian tumors, so it's possible I have and
- 6 didn't look for talc -- didn't look for talc.
  - MR. KLATT: Objection. Nonresponsive.
  - Q. My question was: Have you ever
- <sup>9</sup> diagnosed a patient with a talc-related ovarian
- cancer, meaning you have said, "Your cancer is related to talc use"?
- A. Well, first of all, I wouldn't have said that if I'm not looking for talc.
  - But secondly, in our pathology reports, even though we're thinking and looking at causation,
  - 6 we're not necessarily putting in our individual
- <sup>17</sup> patient reports what caused their cancer.
  - We're certainly putting the diagnosis
- 19 together with their medical history and their --
- to kind of make all the pieces fit together, but we're not necessarily in every patient putting
- 22 out a report on what causes their cancer.
- MR. KLATT: Objection. Nonresponsive.
- MS. AHERN: Objection. Nonresponsive.
  - Q. I just want to know if you've ever

Page 317

- <sup>1</sup> actually diagnosed a patient with a talc-related
- <sup>2</sup> ovarian cancer. It sounds like the answer is no.
- If it is, it's okay. I need an answer.
- <sup>4</sup> A. I'm trying to answer your question.
- <sup>5</sup> Honestly, it's entirely possible that I have.
- But have I specifically put in a patient's
   report, "This ovarian cancer was caused by tale,"
- 8 no.9 (
  - Q. Thank you. That's all I was asking.
- What about at tumor boards? Do you attend tumor boards?
- <sup>12</sup> A. I do.
- Q. Have you ever suggested in a tumor
- board meeting with other colleagues that a
- particular patient's ovarian cancer was caused by talc use?
- A. I've certainly discussed with
- <sup>18</sup> oncologists and radiation oncologists about my
- 19 recent work. Again, it's been only in the last
- year and a half that I have really done this deep
- <sup>21</sup> dive in this literature.
- And I've certainly talked to radiation
- oncologists, oncologists about it at tumor boards
- <sup>24</sup> in a way of sort of educating them about my
- findings, but we haven't discussed in the context

Page 318 Page 320 <sup>1</sup> of a particular patient. <sup>1</sup> asbestos in it. Q. And were these discussions with Are you choosing to believe the plaintiffs' <sup>3</sup> radiation oncologists, were these people that asbestos experts over Ms. Pier's testimony? 4 focused on -- if they focus on -- gynecologic MR. TISI: Objection. <sup>5</sup> malignancies? Were they more pulmonary? Is A. Again, I think these were pieces of <sup>6</sup> there a difference with radiologists in terms of 6 information for me. I wasn't relying on her -the exhibit from her testimony for my general <sup>7</sup> specialty? A. There are some subspecialties. In this causation. I wasn't -- and I didn't see one, they were more general radiation Dr. Longo's reports until very late in my process oncologists. from what I recall. 11 Q. Okay. It's interesting information for me. It's 12 MS. AHERN: How much time do we have? 12 informative in that if the talcum powder products 13 THE VIDEOGRAPHER: Fifteen minutes. cause [sic] asbestos, that certainly lends 14 MS. AHERN: I'm going to turn it over significance to plausibility. But I'm --MR. ROTMAN: Do you want to reread your to my colleagues so they have an opportunity to ask questions. Thank you very much. I answer there? I think you misspoke. 17 appreciate it. THE WITNESS: Okay. Sorry. 18 THE WITNESS: Thank you. A. Yes. I did. If the talcum powder 19 MR. KLATT: How much time do we have? contains asbestos, that certainly adds to the We're at 6:37 right now. plausibility. But I'm not opining on whether or 20 21 Are you ready for me to continue? not talcum powder products contain asbestos. **CROSS-EXAMINATION** 22 Q. And you wouldn't have the expertise to 22 23 BY MR. KLATT: decide that Dr. Longo's testimony about asbestos Q. Dr. Kane, are you ready to continue? <sup>24</sup> in talc is more credible than Ms. Pier's 25 A. Yes. testimony about asbestos in talc, do you? Page 319 Page 321 Q. Can you hear me okay? A. I have a, I would say, cursory 1 <sup>2</sup> knowledge of how they would test for asbestos. I 2 A. Yes.

- Q. Yes. Dr. Kane, my name is Mike Klatt,
- 4 and I represent a company called Imerys Talc
- America in this case.
- Before this lawsuit, have you ever heard of
- 7 Imerys Talc America?
- 8 A. I don't believe I had, no.
- 9 Q. Do you know what Imerys Talc America 10 does?
- 11 A. From my understanding, they mine talc,
- 12 and they supply -- they're the talc -- one of the
- talc suppliers for Johnson & Johnson.
- Q. You said earlier you reviewed an <sup>15</sup> exhibit of Julie Pier's deposition.
- 16 Do you know who Julie Pier is?
- 17 A. I know she was a designated
- 18 representative. I don't know if it was for J&J
- or for Imerys off the top of my head.
- 20 Q. Ms. Pier works at Imerys, and she's an
- 21 expert microscopist and at analyzing talc for any
- 22 extraneous substances like asbestos.
- 23 She testified that the evidence you looked
- at did not indicate in any way that talc that
- ended up in Johnson & Johnson's baby powder had

- couldn't say that I am an expert in the methods
- that they use to detect asbestos.
- Q. But my specific question is: You don't
- 6 have the expertise to determine that Dr. Longo's
- testimony about asbestos and talc is more
- credible with or more believable or more
- scientifically valid or less scientifically valid
- than Ms. Pier's testimony about asbestos and
- 11 talc; correct?
- 12 That's my question.
- 13 A. Again, it's pieces of information for
  - me. I don't know anything, really, about
- <sup>15</sup> Dr. Longo versus Ms. Pier. I just have seen the
- exhibit from Ms. Pier's testimony and Dr. Longo's
- report, but I don't have more information nor
- have I really sought it out about their
- credentials. I was just using it as pieces of
- 20 information.
  - Q. But again my question is: You have no ability or expertise on your own to judge whether
- Ms. Pier's testimony that there's not asbestos in
- talc is correct or Dr. Longo's testimony is
- correct. That's not an area of your expertise;

1 correct?

- A. It -- I wouldn't say I'm an expert in
- 3 that area.
- Q. You mentioned earlier in response to
- <sup>5</sup> Ms. Ahern's questions, you talked about heavy
- Are you aware that IARC has not singled out
- 8 a single heavy metal as a cause of ovarian
- cancer?
- 10 A. Yes. I have seen that. I have
- 11 reviewed the IARC monograph on heavy metals, and
- 12 I'm aware.
- 13 But, again, it's another sort of piece of
- 14 the plausibility puzzle. If we -- we know that
- <sup>15</sup> some of them are either listed as carcinogens or
- <sup>16</sup> probable carcinogens. If they're in the talcum
- powder product, that's just another piece of the
- <sup>18</sup> biological plausibility puzzle. And I --
- 19 Q. Well, is it your -- I'm sorry. I
- 20 didn't mean to cut you off.
- 21 A. No. Sorry.
- 22 Q. Is it your testimony that if something
- 23 is considered a carcinogen for one organ system
- 24 by IARC, that it's capable of causing cancer in
- <sup>25</sup> all organ systems?

- Page 324 <sup>1</sup> at the end of the answer before you started your
- <sup>2</sup> next question.
- A. So I'm aware that they're in these
- 4 things. What I'm looking at is a product that's
- <sup>5</sup> used frequently and for -- in a lot of women for
- <sup>6</sup> a long duration of time. So their exposure -- if
- they are in the talcum powder, their exposure to
- those heavy metals would be greater than the
- exposure they're getting in the environment.
- Q. Those same, exact heavy metals are in
- drinking water, bottled water, food, and
- multivitamins that people take every single day,
- and there's no evidence that they cause ovarian
- cancer; correct?
- A. There has not been a link with heavy
- metals to ovarian cancer specifically as of yet.
- Q. And there's no evidence you're aware of
- that the tissue levels of any heavy metals are
- higher in talc users than in women who never used
- 20 talc: correct?
- 21 A. I don't -- I'm not aware of that study
- 22 being done.
- 23 Are you talking tissue levels?
  - Q. Blood levels --
- 25 A. Blood levels.

Q. -- tissue levels. Anything you want.

Page 325

<sup>2</sup> today, I think different tissues respond in You're -- there's no medical or scientific

24

- <sup>3</sup> evidence that you would tell this court that the
- 4 levels of heavy metals in women who use talcum
- <sup>5</sup> powder in the genital area are higher than women
- <sup>6</sup> who have never used talcum powder?
- A. I'm not aware of studies that have been
- done that have looked at the levels of those
- heavy metals in ovarian tissue or blood levels.
- Q. Earlier you mentioned there was a study
- about changing gene expression in the presence of
- talc in mesothelial cells?
- 13 A. Yes.
- Q. The mere fact that you have changing
- gene expression in no way implies something is
- carcinogenic; correct?
- 17 A. It -- it's evidence that it's changing 18
- gene expression within those cells, and --19 Q. If -- I'm sorry. Go ahead.
- 20 A. And the genes in that study that had
- increased expression are involved in the
- inflammatory -- are pieces in the inflammatory
- 23 response.
- Q. You're aware that many of those genes
- <sup>25</sup> in that study were antioxidant genes and

- Page 323
- A. As I've testified several times here
- <sup>3</sup> different ways to different carcinogens. So I
- 4 would not make a blanket statement that a
- <sup>5</sup> carcinogen in one site will definitely cause
- <sup>6</sup> cancer in another site.
- However, having carcinogens, known
- <sup>8</sup> carcinogens in a product, it can add to the
- <sup>9</sup> biological plausibility. And we're not talking
- 10 about these heavy metals sort of in the
- <sup>11</sup> environment. I mean, these are -- there's
- <sup>12</sup> evidence that they are in a product that's used
- <sup>13</sup> regularly and frequently.
- Q. Are you -- are you aware that the same, <sup>15</sup> exact heavy metals are in bottled drinking water?
- A. So, again, I don't know what the levels
- of these heavy metals are in drinking water. I <sup>18</sup> know that they are found in the environment
- 19 commonly.
- 20 Q. Are you aware they're in foods?
- A. I'm aware that they are in the <sup>22</sup> environment and foods regularly. Yes. But --
- 23 Q. Are you aware they're in multivitamins? 24 MR. ROTMAN: Wait. Wait.
- 25 I was hearing a "but" and not a period

Golkow Litigation Services

1

4

13

anti-inflammatory genes that were elevated;
 correct?

A. They can regulate or deregulate, and I think it's interesting -- let's say that they were antioxidant -- they were producing antioxidant enzymes. I think that is evidence that it's trying -- that the cell is trying to respond and is trying to prepare itself for an

9 insult, an inflammatory insult. Otherwise, why 10 would that gene be expressed?

So, I mean, there's increased and decreased regulation.

O But Dr Kane you're aware that

Q. But, Dr. Kane, you're aware that strenuous exercise can increase gene expression of prooxidants, antioxidants, proinflammatory, anti-inflammatory proteins; correct?

A. Strenuous exercise can increase
 antioxidants in proinflammatory,
 anti-inflammatory proteins.

But, again, I'm opining about a product that someone is going to be using regularly with frequency over a long period of time.

Q. You're aware that --

A. It just adds to the -- I'm not -- you know, I don't have an opinion about whether or

Page 327

not those heavy metals are in talc. I've looked
 at some evidence that they are there, but I don't

<sup>3</sup> have an opinion that they're actually in talc.

4 It's just another piece of evidence, again, for
5 the biological plausibility.

Q. Well, you're not saying that people who regularly engage in chronic exercise, chronic strenuous exercise, for a long period of time are

9 at increased risk of cancer because they have

increased gene expression, are you?
 A Well there hasn't been epide

A. Well, there hasn't been epidemiologic evidence that is consistent that people who do routine strenuous exercise get cancer.

Q. The Buz'Zard study you cited, that actually showed that talc -- increasing doses of talc decreased release of reactive oxygen species from ovarian cells, not increased it; correct?

A. I believe it was different -- I would have to look at the study, but it was over different time periods. It fluctuated.

Q. The highest level of reactive oxygen species in the Buz'Zard study was the group of cells that had no talc applied at all; correct?

A. I'd have to re-review the study.

Q. Let's --

24

25

Page 328 MR. KLATT: Can we mark that?

<sup>2</sup> MR. ROTMAN: Can we get a time check?

THE VIDEOGRAPHER: 6:30.

MR. ROTMAN: Thank you.

(Article entitled "Pycnogenol
 reduces Talc-induced Neoplastic

Transformation in Human Ovarian Cell

8 Cultures" marked Exhibit 26.)

MS. AHERN: That's 26.

Q. Referring to Exhibit 26, Dr. Kane, is this the Buz'Zard study you were mentioning earlier?

A. Yes, this is it.

Q. And if you'll flip over to Page 3 -
secuse me, 582, Figure 3, do you see Figure 3

is --

MR. ROTMAN: Can I have a copy of that, please?

MR. KLATT: I'm sorry?

MR. ROTMAN: I'm waiting for a copy of that.

MR. KLATT: Oh. Yes. We do provide copies.

MR. ROTMAN: This is Exhibit No. 1? THE WITNESS: I'm sorry. Which table?

Page 329

ked 1 MS. AHERN: Twenty-six.

24

25

<sup>3</sup> Q. Figure 3. Page 582.

MR. ROTMAN: What exhibit are we on?

5 COURT REPORTER: Twenty-six.

6 MR. ROTMAN: Thank you.

<sup>7</sup> BY MR. KLATT:

<sup>2</sup> BY MR. KLATT:

Q. And you see Figure 3 is "ROS."

<sup>9</sup> That stands for reactive oxygen species?

<sup>10</sup> A. That's --

Q. And, by the way, ROS are generated by every cell of the body every day, 24 hours a day; correct?

every cell of the body every day, 24 hours a da correct?

A. Reactive -- you do see it in daily cell

life. But, again, I'm talking about an
 additional exposure, an agent that that is being
 analist in addition to what you're assist on

applied in addition to what you're seeing on -basically the cell has, as we just discussed,

they have ways of mitigating reactive oxygen

20 species.

The cell can increase their antioxidant enzymes, but at some point, they can get

overloaded. So if you're giving it a higher dose at a higher frequency than those systems can

<sup>25</sup> handle, you're going to have an increased risk of

- <sup>1</sup> mutagenesis.
- Q. Well, let's look at what Buz'Zard found
- when talc was applied to surface ovarian cells.
- Do you see that? That's Figure 3A up at the 5 top?
- 6 A. A, up at the top. Yes.
- Q. And you'll agree with me, you see on
- 8 the Y axis it says "Percentage of reactive oxygen
- species generation in OSE2a cells"; correct?
- 10 A. Yes.
- 11 Q. That's ovarian surface epithelial
- 12 cells: correct?
- 13 A. Yes.
- Q. And you'll see at the zero talc level 14
- 15 on the X axis --
- 16 A. Mm-hmm.
- Q. -- that had 100 percent talc -- excuse
- me -- a 100 percent reactive oxygen species
- generation at all three time periods; correct?
- 20 A. That is correct. And --
- 21 Q. And when talc was applied?
- 22 MR. ROTMAN: Wait. Wait.
- 23 Did you finish your answer?
- A. Well, we were just talking about how
- <sup>25</sup> cells can have innate ROS generation.

- <sup>1</sup> generation for each talc microgram.
  - Q. Do you see in the far right column,
  - <sup>3</sup> they applied 200 micrograms of hydrogen peroxide?

Page 332

Page 333

- Q. And that resulted in a 200 percent
- <sup>6</sup> increase in reactive oxygen species during those
- time periods; correct?
- A. That is what it says. Yes.
- Q. And that's their positive control;
- 10 correct?
- 11 A. Let me just double-check.
- 12 If I'm remembering the study correctly, yes,
- you are -- you are right.
- Q. People gargle with hydrogen peroxide; 14
- 15 correct?
- 16 A. They shouldn't.
- 17 Q. Well, you know, it's allowed on the
- 18 bottle.
- 19 You know that; correct?
- 20 A. If you're telling me they gargle with
- 21 it, that's fine.
- 22 Q. Well, they put it on cuts; right?
- 23 A. They shouldn't put it on cuts. It's
- actually --
  - Q. It's sold for that, isn't it?

Page 331

- Q. And this graph shows that as you
- <sup>2</sup> applied increasing doses of talc, the level of
- <sup>3</sup> generation of reactive oxygen species in the
- <sup>4</sup> ovarian cells went down.
- It didn't go up; correct?
- A. Well, it goes up at -- what's the 50 --
- <sup>7</sup> the 50 micrograms per milliliter. It goes up at
- 8 that dose at the 120 hour, and then it goes up at
- <sup>9</sup> the 200 microgram level.
- 10 Q. That's not tale, is it?
- 11 A. I'm sorry. I'm looking at -- I'm
- 12 looking at -- it says "Talc micrograms per
- 13 milliliter," and then it lists the different
- 14 hours on the right; that they're color-coded to
- <sup>15</sup> the different hours.
- 16 Q. And 17 out of the 18 measurements they
- took when talc is applied to ovarian cells showed
- <sup>18</sup> the ovarian cells generated less reactive oxygen
- 19 species than no talc at all; correct?
- 20 A. And I --
- 21 Q. Is that correct?
- A. It looks like at different periods of 22
- 23 time at the 100 micrograms and 500, there was
- <sup>24</sup> less than the lower. But I'm not sure what the
- <sup>25</sup> threshold dose would be for optimal ROS

- A. I think most MDs would tell you that
- <sup>2</sup> it's probably better not to use hydrogen peroxide
- <sup>3</sup> on open cuts because it can cause a pretty severe
- <sup>4</sup> reaction.
- Q. You're aware that it's sold over the
- <sup>6</sup> counter in stores every day for -- as an
- antiseptic?
- A. Talcum powder is sold for everyday use
- on babies.
- 10 Q. So are you telling us that hydrogen
- peroxide now causes cancer?
- 12 A. I'm saying that it will release ROS
- species generation.
  - Q. Far more than talc; correct?
- 15 A. Based on this study, it appears that
- <sup>16</sup> way.

17

- Q. And you --
- 18 A. This one study. 19
  - Q. You agree with me this shows, as you
- apply talc, reactive oxygen species in ovarian
- cells decreases.
- 22 It doesn't increase at 17 out of 18 time
- 23 points; correct?
- 24 A. They're -- I will agree with you,
- <sup>25</sup> except there is a time point where it is

- <sup>1</sup> increased. And I don't know -- my caveat is I
- <sup>2</sup> don't know where the threshold would be where the
- <sup>3</sup> ROS would stop being generated.
- 4 Q. Is aspirin approved by any
- 5 pharmaceutical company or recommended by any
- 6 medical organization for prevention of ovarian
- <sup>7</sup> cancer?
- 8 A. That is not on the label description.
- <sup>9</sup> Q. If aspirin prevented ovarian cancer,
- don't you think it would be marketed for that
- $^{11}$  purpose?
- MR. TISI: Objection.
- MR. ROTMAN: Objection.
- A. I'm sure it may be after years of FDA
- 15 red tape and approval, but the literature --
- <sup>16</sup> again, I've said the literature is not as beefy
- <sup>17</sup> as the epi data when we're looking at aspirin and
- 18 NSAIDs.
- NSAID, in particular, is not as consistent.
- <sup>20</sup> The aspirin data does appear to be consistent in
- 21 lowering the risk, but there are not a lot of
- 22 studies looking at this yet.
- Again, though, just a piece of the puzzle
- <sup>24</sup> for a biologic plausibility.
- Q. Well, certainly, we're not at the point

A. I have to look at the studies. There

Page 336

Page 337

- <sup>2</sup> might be one where it wasn't statistically
- <sup>3</sup> significant, but I think the majority of the ones
- <sup>4</sup> that looked at aspirin use showed a decreased
- <sup>5</sup> risk of ovarian cancer.
  - Q. Are you -- are you a member of the
- <sup>7</sup> International Society of Gynecologic
- 8 Pathologists?
  - A. I don't think I'm a member currently.
- <sup>10</sup> No.

9

13

18

24

25

- Q. Have you ever been?
- <sup>12</sup> A. I believe so.
  - Q. It's not on your CV.
- <sup>14</sup> A. Okay. I'm not currently. I know that.
- Q. Are you a member of the American
- <sup>16</sup> Society of Clinical Pathology?
- <sup>17</sup> A. I actually am.
  - Q. It's not on your CV.
- A. Okay. That should be updated, then.
- Q. Have you ever been a member of any
- <sup>21</sup> working group or organization on the
- <sup>22</sup> classification of female reproductive organ
- <sup>23</sup> tumors?
  - A. No. I can't -- no.
  - Q. You mentioned the Surgeon General's

Page 335

- <sup>1</sup> for aspirin and ovarian cancer that we are, for
- <sup>2</sup> example, with aspirin in terms of cardiovascular
- <sup>3</sup> risk; correct?
- 4 A. I would agree with that sentiment.
- Q. And doctors and medical organizations
- 6 have recommended aspirin for reduction of
- <sup>7</sup> cardiovascular risk; correct?
- 8 A. That's correct. Although the dosage
- 9 has -- as of late, they're kind of parsing out
- 10 the -- they're reevaluating what dosages, but
- 11 you're correct.
- Q. And you can't cite a single medical
- 13 organization that at this point in time says the
- <sup>14</sup> evidence that aspirin reduces ovarian cancer is
- <sup>15</sup> sufficient that women should take it on a regular
- <sup>16</sup> basis to reduce ovarian cancer; correct?
- A. Well, I think I've said there aren't
- 18 that many studies yet. It's only -- that I'm
- <sup>19</sup> aware of, there are only a handful. They've been
- 20 consistent with aspirin. Not so much with NSAID.
- 21 That's, I think, as far as the evidence takes us
- 22 as this point.
- Q. There's actually studies showing that
- 24 chronic aspirin ingestion doesn't decrease
- ovarian cancer risk; correct?

- <sup>1</sup> report in 1964. You're aware that when that came
- <sup>2</sup> out about smoking, there were numerous studies in
- <sup>3</sup> the literature at that point in time showing that
- 4 the chemicals in cigarette smoke actually damaged
- <sup>5</sup> DNA and resulted in cancer; it wasn't based just
- 6 on epidemiology?
  - A. I think epidemiology -- my point was
- 8 that the epidemiology was the sort of first --
- <sup>9</sup> there were pathologists that had noticed on
- 10 autopsies in patients that smoked -- it was
- <sup>11</sup> actually pathologists and a surgeon in the early
- 12 years -- that had noticed some changes, some
- 13 squamous metaplastic changes.
  - But it was really the epi data that sort of
- <sup>15</sup> drove the research on smoking and tobacco
- <sup>16</sup> initially. But, again, there were some studies
- that had shown some pathologic changes in
- 18 smokers. That's true.
- Q. You're aware that the cohort studies,
- 20 the hospital-based case-control studies, and the
- population-based case-control studies all
- <sup>22</sup> uniformly showed that smoking increased the risk
- 23 of lung cancer; correct?
- A. That's correct.

25

Q. And that's not true for talc and

Page 338 Page 340 1 ovarian cancer: correct? <sup>1</sup> that one statement. A. Well, I have some issues with the Go ahead. 3 <sup>3</sup> cohort studies. MR. ROTMAN: If you want to do that, Q. I know that. that's fine. 5 But my statement is true; correct? BY MR. KLATT: A. But I think it's relevant because the Q. That draft -- Health Canada issued a <sup>7</sup> cohort studies, I don't believe, followed draft assessment that's undergoing a 60-day patients for a long enough time. public comment period; correct? 9 The Nurses' Health Study only asked about A. That's true. 10 talcum powder use once in 1982, so there's Q. And then they have up to two years to 11 certainly room for misclassifications of users as decide whether to take any action or no action at 12 never users. all: correct? 13 13 And some of -- some of -- again, there's A. Well, there's two pieces of that. From 14 smaller numbers because it's a -- it's a cohort 14 my understanding is that they've already done the <sup>15</sup> scientific. They've already done the literature 16 Q. You're aware that the National Cancer <sup>16</sup> review. They've already done their Bradford Hill 17 Institute doesn't agree with you on that, aren't <sup>17</sup> analysis, and they've come to the conclusion that they've come to. you? 19 19 A. I have seen the NCI website. I And then there's the public commentary. And <sup>20</sup> then there's the regulatory aspect of it. <sup>20</sup> certainly considered what they say about it. I 21 don't know if they have done the same type of Now, I am -- I would not claim to be an <sup>22</sup> analysis as I've done. I don't believe it's on <sup>22</sup> expert in regulatory. I know we have regulatory 23 their website what methodology they used and what experts that are coming on. But in -- from my <sup>24</sup> literature they reviewed. <sup>24</sup> understanding, the regulatory aspect is different So I'm aware of what they've stated. But, 25 than the scientific aspect. Page 339 Page 341 <sup>1</sup> you know, I've still done this extensive review MR. ROTMAN: Mike, you're done? I just <sup>2</sup> that I'm not sure they did to come to my 2 want to --3 <sup>3</sup> conclusion. MR. KLATT: I'm through. Q. You honestly don't know what the NCI MR. ROTMAN: I just want to go off the 4 <sup>5</sup> did in terms of review to come to their record. 6 conclusion, do you? We're done with seven hours. A. They didn't state what they did, so I MR. KLATT: Yes. I'm done. do not know. So that would -- but that's MR. TISI: Let's take a minute. <sup>9</sup> something that I'm thinking about when I'm taking THE VIDEOGRAPHER: Off the record, 10 into consideration. 10 6:31 p.m. 11 Q. And you are aware that they just 11 (A recess was taken.) 12 updated their statement that the evidence does 12 THE VIDEOGRAPHER: Back on the record, 13 not support a link between talc and ovarian 6:40 p.m. <sup>14</sup> cancer in January 2019, the same month we're **CROSS-EXAMINATION** 15 sitting here today? 15 BY MR. ROTMAN: 16 A. I don't know if I've gone to the NCI Q. Dr. Kane, I know it's been a long day <sup>17</sup> website this month. for you, but I'm going to ask you a few questions. I will be brief. But I'm also aware of Health Canada that 19 19 came out and did -- and we know what the A. Okay. 20 20 methodology and literature they -- they spelled Q. At one point today, you were asked some 21 it out very clearly what their methodology was, 21 questions by Attorney Ahern about certain 22 what literature review they did, and they came to 22 negative studies on inflammation, and she

MR. ROTMAN: Off the record, Mike?

MR. KLATT: Let me just follow up on

<sup>23</sup> the same conclusion that I did.

24

25

mentioned Bonovast 2005 and Ni 2012, which she

24 asked you about.

Do you recall that?

25

A. Yes.

1

- 2 Q. She did not show you those studies, did 3 she?
- A. I don't believe I saw them.
- 5 O. Are you able to agree with her
- <sup>6</sup> characterization that these were negative studies
- without having -- without looking at them?
- A. I should have asked for them and had
- them in front of me while asking questions.
  - Q. Now, you were asked questions --
- 11 A. I mean answering questions.
- 12 O. -- throughout the day about
- 13 inflammation as a biologically plausible
- mechanism for explaining talc causing ovarian
- cancer in light of the epi study findings.
- 16 A. Yes.
- 17 Q. You were also asked questions about
- 18 cigarette smoking at various times throughout the
- 19 day?
- 20 A. Yes.
- 21 Q. Does cigarette smoking have an
- <sup>22</sup> inflammatory effect?
- 23 A. Yes.
- 24 O. What is the --
- 25 A. It does cause chronic inflammation.

- iust strike that.
  - You were asked questions about surgical

Page 344

Page 345

- gloves and surgical-grade talc on surgical
- gloves.
- A. Yes.
- Q. Do you recall that?
- A. Yes.
- Q. And I think you were asked if you were
- aware of any studies linking the use of talcum
- powder on surgical gloves with the occurrence of
- ovarian cancer. 12
  - Do you recall that?
  - A. Yes.

13

21

11

13

16

- 14 Q. Is there a difference, a notable
- difference, between talcum powder on surgical
- gloves and the talcum powder products in perineal
- use that, regardless of the constituent of the
- powder, that you would want to point out?
- 19 MR. KLATT: Objection. Form.
- 20 MS. AHERN: Same.
  - A. So a patient's exposure to surgical
- gloves are going to be infrequent and not of long
- duration. It's not the same type of exposure as
- <sup>24</sup> regular and frequent application of perineal
- 25 talcum powder that we're seeing in the epi data.
- Page 343
- Q. You were also asked questions about
- <sup>2</sup> heavy metals being present in food and water and
- <sup>3</sup> vitamins; correct?
- A. I remember. Yeah.
- Q. Do -- what is different between those
- <sup>6</sup> circumstances and the situation that we have been
- discussing all day today involving talcum powder?
- A. With talcum powder, we do have the epi
- <sup>9</sup> data that are consistent and show an increased
- 10 risk of ovarian cancer with talcum powder use.
- 11 Q. And with respect -- you were asked some 12 questions in relation to the Buz'Zard study about
- 13 hydrogen peroxide and the reactive oxygen species
- 14 reaction?
- 15 A. Yes.
- Q. Are you aware of any evidence that
- hydrogen peroxide -- the effect of hydrogen
- peroxide in the female genital tract?
- 19 A. I'm not aware that women routinely use
- <sup>20</sup> hydrogen peroxide in the female genital tract.
- Q. And is there anything in particular
- 22 about the -- that part of the anatomy that where
- <sup>23</sup> certain agents, exposure to certain agents, would
- <sup>24</sup> raise any particular concerns -- strike that.
- 25 I think that was a bad question, so I'll

- MR. ROTMAN: No further questions.
- <sup>2</sup> It's 6: --
- (Discussion off the record.)
- MR. ROTMAN: You're right.
- BY MR. ROTMAN:
- O. I have some questions for you about
- your testimony on the Harlow paper.
  - A. Okay.
- 9 Q. Can you pull that out in front of you,
- 10 which was Exhibit 20?
  - A. Okay.
- 12 Q. Can you turn to Table 3.
  - A. Okav.
  - Q. And do you recall that you were asked
- questions about dose-response in this study?
  - A. Yes.
- 17 Q. And do you recall that you were
- specifically asked questions about this Table 3? 19
  - A. Yes.
- Q. Could you look at the middle part of
- <sup>21</sup> Table 3, at the column with "adjusted odds 22 ratios"?
- 23 A. Yes.
- 24 Q. What can -- what do you observe with
- <sup>25</sup> respect to the adjusted odds ratio as the -- as

- <sup>1</sup> the -- as the number of applications goes from <sup>2</sup> less than 1,000 to greater than 10,000?
- A. The adjusted ORs go from -- the null, 4 1.0 at none, 1.4 at less than 1,000, to 1.7 at

greater than 10,000.

- Q. And so what, just looking at the adjusted odds ratio, what --
  - A. It's an increase with increased --
- 9 Q. -- what is your takeaway?
- 10 A. So it does show an increased odds ratio <sup>11</sup> with increased applications.
- 12 The confidence intervals do include the null, but they're -- the higher end, it's higher confidence interval at the upper end.
- 15 And it's not very far from the null on the 16 lower end.
- 17 And it, in fact, includes -- it's 1.0 at 18 greater than 10,000.
- 19 Q. And so for the 1,000 to 10,000 <sup>20</sup> applications, the lower bound of the confidence 21 interval is .9?
- 22 A. Correct.
- 23 Q. And how close is that to being a
- statistically significant finding?
- 25 A. Very close.

A. Yes.

- O. And this is -- this is in the
- <sup>3</sup> "Discussion" section of the paper; is that right?

Page 348

Page 349

- Q. And do you see in the paragraph that
- <sup>6</sup> I'm pointing to that begins with "Our study"?
  - A. Yes.
- Q. Could you read into the record and
- comment on the last sentence in that paragraph.
- A. "Daily versus less-than-daily talc use and talc use for more than ten years versus less 12 than ten years were associated with greater risk
- for ovarian cancer."
  - Q. And can you comment on that?
- 15 A. So that does show a trend for a dose-response.
- 17 MR. ROTMAN: Okay. So I have 6:48.
- 18 You've got eight minutes.
  - **RECROSS-EXAMINATION**
- BY MR. KLATT:
- Q. That Harlow study you were just looking
- <sup>22</sup> at --

14

19

24

13

22

25

- 23 A. Yeah.
  - Q. -- is that the 1992 Harlow study?
- 25 A. It's the 1992 from Exhibit 20.

Page 347

- Q. And can you also take a look at the
- <sup>2</sup> discussion on that page in the left-hand column
- <sup>3</sup> in the paragraph that begins with "We also
- 4 examined"?
- 5 A. Okay.
- Q. Is there a discussion in that paragraph
- <sup>7</sup> concerning the author's discussion of
- dose-response?
- 9 A. Yeah. There's a sentence that states,
- 10 "The categorical analysis showed that relative to
- 11 nonusers, the risk was greatest in women who
- 12 applied talc at least once per day. When years
- 13 of use was included as a continuous variable, the
- 14 test for linear trend was 3.32, p-value of .07.
- 15 "The categorial analysis show that relative 16 to nonusers, women who applied talc for more than
- 17 ten years were at a 60 percent greater risk for
- <sup>18</sup> ovarian cancer. Likewise, perineal applications
- 19 of talc early in life, before age 20, or
- <sup>20</sup> applications within six months of diagnosis
- 21 reference age for controls produced the stronger
- 22 ORs."
- Q. And I'd like to also call your
- 24 attention to the page 24 in the right-hand
- 25 column.

- Q. And can you look on the last page of
- <sup>2</sup> this study, the page where the article ends and
- the reference begins.
- Did Harlow find the strength of association
- between genital use of talc and ovarian cancer
- was strong or weak?
- A. So they use -- they say, "Because the
- overall association between genital use of talc
- and ovarian cancer remains weak."
- And, again, "weak" is sort of a relative.
- 11 I've seen weak to moderate with this odds ratio.
- <sup>12</sup> And this is also 1992.
  - MR. KLATT: Object. Nonresponsive.
  - Q. I'm simply asking you, Dr. Kane, does
- <sup>15</sup> Harlow say strength of association between
- ovarian cancer and talc use is strong or weak? 17
  - A. Well, I'm putting it in context. He
- states -- I agree with you that's what the words
- say, but I'm putting it in context in that "weak
- to moderate" is used amongst epidemiologists for
- this level of overall risk.
  - And this is 1992, so there wasn't the
- subsequent studies that have gone on that show
- consistent, similar overall risk odds ratio.
  - O. And would it be correct that the

- Page 352 <sup>1</sup> statement that I asked you to read says in full,
- <sup>2</sup> "Because the overall association between genital <sup>2</sup> but the authors are aware. Many of them talk
- <sup>3</sup> use of talc and ovarian cancer remains weak, it
- 4 is unlikely that this exposure disease pathway is
- <sup>5</sup> the principal one involved in ovarian cancer 6 etiology"?
  - Is that what Harlow said?
- A. That's what it states. But, again,
- <sup>9</sup> that is 1992. This is the very beginning of the epi data looking at this exposure and ovarian

<sup>11</sup> cancer.

- 12 MR. KLATT: Object and move to strike everything after "That's what it says."
- 14 Q. And, by the way, the odds ratio that <sup>15</sup> Harlow found overall was 1.5.
- 16 And that's even a little higher than the odds ratios the more recent meta-analyses have shown: correct?
- 19 A. So --
- 20 Q. So they're even weaker than Harlow.
- 21 A. I'm sure some epidemiologists might
- 22 take -- I'm not -- but, again, I've seen, even
- <sup>23</sup> with 1.3 and 1.4, epidemiologists refer to that 24 as "moderate."
- 25 So I don't know if it's semantics, but it's

- <sup>1</sup> element of recall bias in case-control studies,
- <sup>3</sup> about that and discuss why they feel recall bias
- 4 wasn't an explanation.
- And, again, we're talking about multiple
- 6 studies over numerous populations over different
- periods of time, most of them well before the
- general public knew about an association between
- talcum powder and ovarian cancer.
- And even further, the fact that there's a strong association in the literature with serous
- 12 invasive cancer would argue against a recall bias
- because the lay public is not knowledgeable about
- the histologic subtypes of epithelial ovarian
- carcinoma.
- 16 Q. Let me ask you this, Dr. Kane: We 17 lawyers, before we have to go to trial, like to
- know if the prospective jurors have already made
- up their mind about the case.
- 20 Do you know if in any of these case-control studies where the women who had ovarian cancer,
- <sup>22</sup> were they asked before they entered the study,
- 23 "Do you have a preconceived notion about what
- caused your ovarian cancer?"
  - A. I'm not aware of a case-control design

Page 353

Page 351

25

5

- <sup>1</sup> 1.3. It's a 30 percent increased risk. In this
- <sup>2</sup> case, 1.5, a 50 percent increase in risk. And in
- <sup>3</sup> a rare disease like ovarian cancer, that's
- 4 significant.

17

- 5 Q. And Harlow calls a 1.5 odds ratio weak; 6 correct?
- A. That's what he says in this 1992 paper.
- O. And you'd agree with me the more recent
- 9 meta-analyses of talc and ovarian cancer have a 10 lower odds ratio than 1.5?
- 11 A. They seem to be between 1.3 and 1.4, but the important thing to me is the consistency.
- O. And you're aware that epidemiologists 14 say with case-control studies that odds ratios in 15 the range of 1.0 to 1.5 are well within the range <sup>16</sup> that can be explained by bias and confounding?

MR. ROTMAN: Objection.

- 18 A. I think all of the studies were
- 19 aware -- all of the authors were aware of potential recall bias and confounding and sought
- 21 to control as much as possible those factors in
- 22 their control studies. Most of them, I feel,
- <sup>23</sup> were relatively well-designed to assess for and <sup>24</sup> adjust for multiple confounding factors.
- 25 And as far as recall bias, there's an

- 1 that would ask that question because even asking
- 2 that question would potentially add an element of
- 3 recall bias --
  - Q. But if a woman already --
    - MR. TISI: She wasn't finished.
  - Q. Were you finished?
- A. I was going to say in a lot of these
- studies, they also asked about smoking history
- <sup>9</sup> and other potential lifestyle issues in addition
- 10 to talcum powder use that would -- and yet, those
- 11 types of questions didn't show an elevated risk
- 12 like talcum powder products.
- Q. Well, wouldn't you want to know --
- 14 before you interviewed the women who have ovarian
- 15 cancer, wouldn't you want to know if they have a
- 16 preconceived notion about what caused their 17 ovarian cancer so if you didn't exclude them from
- 18 the study, at least you could take that
- 19 preconceived bias into account when you did the
- 20 statistics?
- A. I would think if you're designing a
- 22 case-control study and trying to avoid recall
- 23 bias, there are better ways to do that because
- <sup>24</sup> just by asking, "Do you have a preconceived
- 25 notion about it?", you're introducing potential

	Page 354		Page 356
1	bias because they might think, Oh, maybe there is	1	Yes. It involves an inflammatory state.
	an association. And you're adding bias,	2	MR. KLATT: Thank you, Doctor.
3		3	MR. TISI: Just one question.
4	Q. You mentioned cigarette smoking just a	4	(Discussion off the record.)
	minute ago in response to Mr. Rotman's questions.	5	MR. ROTMAN: We're done.
6	And you said cigarette smoking involves a	6	MR. TISI: Thank you.

#### C. LICENSURE, BOARD CERTIFICATION, MALPRACTICE

 <u>Licensure:</u> Every physician appointed to the Hospital staff, except interns, and aliens in the US via non-immigrant visas, must have a New York State license or a temporary certificate in lieu of the license.

N/A

2. Board Certification

N/A

3. Malpractice Insurance

N/A

# D. PROFESSIONAL POSITIONS AND EMPLOYMENT

# 1. Academic positions (teaching and research)

Title	Institution name and location	Dates held
Assistant Professor of Mathematics and Computer Science	Macalester College St. Paul, MN	8/1991 to 6/1999
Lecturer of Statistics	University of Auckland Auckland, New Zealand	1/1994 to 7/1996
Assistant Professor of Biostatistics	Mayo Clinic College of Medicine Rochester, MN	12/1999 to 7/2001
Associate Professor of Biostatistics	Mayo Clinic College of Medicine Rochester, MN	7/2001 to 10/2007
Adjunct Associate Professor of Biostatistics	University of Minnesota Minneapolis, MN	9/2007 to 7/2015
Adjunct Associate Professor	Biomedical Informatics and Computation Biology, University of Minnesota Rochester Rochester, MN	9/2010 to 7/2015
Professor of Biostatistics	Mayo Clinic College of Medicine	11/2014 to 7/2015
Professor of Healthcare Policy and Research Tenure awarded (11/2016)	Weill Cornell Medical College New York, NY	7/2015 to present

# 2. <u>Hospital positions (e.g., attending physician)</u> **N/A**

# 3. Other Employment

Title	Institution name and location	Dates held
Actuarial Trainee	Minnesota Mutual Life Insurance Company St. Paul, MN	1983 to 1985
Consultant	AT&T Bell Labs Software Production Research Naperville, IL	1991 to 1994
Research Associate	Division of Biostatistics, Department of Health Sciences Research, Mayo Clinic Rochester, MN	1999 to 2002
Senior Research Associate	Division of Biostatistics, Department of Health Sciences Research, Mayo Clinic Rochester, MN	2002 to 2004
Senior Associate Consultant	Division of Biostatistics, Department of Health Sciences Research, Mayo Clinic Rochester, MN	2004 to 2007

Senior Associate Consultant	Division of Biomedical Informatics Department of Health Sciences Research, Mayo Clinic Rochester, MN	2005 to 2007
Group Statistician	American College of Surgeons Oncology Group (ACOSOG) Statistics and Data Center Rochester, MN	2006 to 2014
Chair	Division of Biostatistics, Department of Health Sciences Research, Mayo Clinic Rochester, MN	2006 to 2008
Consultant	Division of Biostatistics, Department of Health Sciences Research, Mayo Clinic Rochester, MN	2007 to 2008
Consultant	Division of Biomedical Statistics and Informatics, Department of Health Sciences Research, Mayo Clinic Rochester, MN	2008 to 2015
Associate Editor	Journal of Clinical Oncology	2010 to 2017
Deputy Editor	Journal of Clinical Oncology	2017 to present
Consultant	Department of Surgery, Mayo Clinic Rochester, MN	2012 to 2015
Director of Biostatistics	Alliance Statistics and Data Center Rochester, MN	2013 to 2015
Division Chief of Biostatistics and Epidemiology	Healthcare Research and Policy Weill Cornell Medical College New York, NY	07/2015 to present

# E. EMPLOYMENT STATUS (current or anticipated)

Name of Employer(s): Weill Cornell Medical College	
Employment Status (choose one, delete the others): Full-time salaried by Weili Cornell	

# F. <u>INSTITUTIONAL/HOSPITAL AFFILIATION</u> N/A

### G. PERCENT EFFORT AND INSTITUTIONAL RESPONSIBILITIES

WCMC ANTICIPATED % EFFORT	(%)	Does the activity involve WCMC students/researchers? (Yes/No)
TEACHING	20%	yes
CLINICAL	0%	
ADMINISTRATIVE	40%	no
RESEARCH	40%	yes
TOTAL	100%	

#### **INSTITUTIONAL RESPONSIBILITIES**

Teaching (e.g., specific teaching functions, courses taught, dates: For guidance refer to Teaching
 <u>Metrics</u> table. Report your teaching activities in the 4 areas of teaching shown below. To provide a
 more detailed teaching report, use the <u>Teaching Activities Report</u> template or <u>Educator Portfolio</u>
 template (strongly encouraged). Refer to it here as an attachment (e.g., see attached), and attach it
 to the CV.

<u>Didactic teaching:</u> (e.g., lectures, continuing medical education courses, grand roun development programs, seminars, tutorials)	ds, professional
Protocol Development (tutorial leader, Mayo Clinic College of Medicine) Health Sciences Grand Rounds	Dates 2008-2012
Mentorship: (e.g., mentor for medical student, graduate student, resident, clinical or research fellow or junior faculty projects; service as graduate student thesis advisor member)	
8 M.S. candidates in the Clinical Research Master's degree program (Mayo Clinic College of Medicine)  Served on five M.S. thesis committees for M.S. candidates in the Clinical Research Master's degree program (Mayo Clinic College of Medicine)  Thesis advisor to 4 students in the Biomedical Informatics and Computational Biology M.S. degree program	Dates 2004-2015 2004-2015 2012-2015
Clinical teaching: (e.g., teaching in the clinic or hospital including bedside teaching, operating room, preceptor in clinic)	teaching in the
,	Dates
Administrative teaching leadership role: (e.g., residency or fellowship director, course or seminar director or co-director)	
Probability and Mathematical Statistics (course director, Macalester College) Introductory Statistics (course director, Macalester College) Mathematical Modeling (course director, Macalester College) Calculus II (course director, Macalester College) Calculus III (course director, Macalester College) Applied Probability (course director, Macalester College) Data Analysis and Statistics	Dates 1991 1991, 1992 1991, 1992 1992 1992 1992, 1993, 1996, 1998

Mathematical Statistics	1993, 1994, 1996, 1997,
Stochastic Methods in Management Science (course director, University of Auckland)	1998
Decision Analysis (course director, University of Auckland)	1993, 1997, 1999
Data Analysis with R (course director, University of Auckland)	1994, 1995
Statistics Minor Curriculum Development (Macalester College)	1994
Elementary Statistics (course director, Macalester College)	1994, 1995
	1995-1996
Linear Algebra (course director, Macalester College)	1996, 1997, 1998
Senior Capstone (course director, Macalester Coflege)	1996
Applied Multivariate Statistics (course director, Macalester College)	1997, 1998
Differential Equations (course director, Macalester College)	1998
Experimental Design and Data analysis (course director, Macalester College)	1998
Introductory Statistical Method I (course director, Mayo Clinic College of Medicine)	1998
Special Topics in Health Sciences Research (course director, Mayo Clinic College of	1999
Medicine)	2000-2003
Introductory Statistics Methods II (course director, Mayo Clinic College of Medicine)	2002, 2005
Clinical Trials (course director, Mayo Clinic College of Medicine)	2003-2004
Introduction to Biostatistics (course director, Executive MBA/MS program, Weill Cornell	2010, 2011
Medicine)	2017-Present

- Clinical care (duties, dates: To document clinical activities use the table below or, to document
  extensive clinical activities use the <u>Clinical Portfolio template</u> (strongly encouraged). Refer to it here
  as an attachment and attach it to the CV.
   N/A
- 3. <u>Research (duties, dates):</u> Summarize research activities in the table below. Provide key contributions, and annotate key grants and publications or use a <u>Statement of Key Contributions</u>. Refer to it here and attach it to the CV.

Research Activity / Key Contributions Dates	
See Statement of Key Contributions	

4. <u>Administrative Activities (duties, dates):</u> Describe administrative activities in the table below. To document administrative activities more extensively use a supplemental statement, refer to it here and attach it to the CV.

Administrative Activity	Date
Education Committee Member (Health Sciences Research, Mayo Clinic)	2000 to 2002
Education Committee Chair (Health Sciences Research, Mayo Clinic)	2002 to 2007
Education Committee Member (Clinical Research Training Program, Mayo Clinic)	2001 to 2006
Executive Committee Member (Clinical Research Training Program, Mayo Clinic)	2001 to 2005
Master's Examination Committee Member (Clinical Research Training Program, Mayo Clinic)	2002 to 2015
Curriculum Committee Chair (Clinical Research Training Program, Mayo Clinic)	2002 to 2006
Data Safety and Monitoring Board Member (Mayo Clinic Cancer Center)	2003 to 2006
Clinical Studies Oversight Committee Member (Mayo Clinic Cancer Center)	2003 to 2006
Neuro-Oncology Executive Committee Member (Mayo Clinic Cancer Center)	2003 to 2010
Neuro-Oncology Protocol Planning Committee Member (Mayo Clinic Cancer Center)	2003 to 2007
Education Committee Member (Mayo Graduate School)	2004 to 2006
Executive Committee Member (Department of Health Sciences Research, Mayo Clinic)	2004 to 2008
Education Programs Curriculum Committee Member (Center for Translational Activities,	2006 to 2008
Mayo Clinic)	
Division Chair (Division of Biostatistics, Health Sciences Research, Mayo Clinic)	2006 to 2008
Peer Review Research Committee Member (Department of Surgery, Mayo Clinic)	2011 to 2015
Research Executive Committee Member (Department of Surgery, Mayo Clinic)	2011 to 2015

Research Committee Member (Department of Surgery, Mayo Clinic)	2011 to 2015
Data Safety and Monitoring Board Member (Department of Surgery, Mayo Clinic)	2012 to 2015
Division Chief for Healthcare Policy & Research	2015 to present
Healthcare Policy & Research Promotions Committee Member	2015 to present
Weill Cornell Medicine Data Safety and Monitoring Board (alternative) Co-Chair	2017 to present

#### H. RESEARCH SUPPORT

#### **Summarize Past Research Support:**

- The Mayo Clinic Research Training Program funded by National Center for Research Resources (K30 RR 22296) from 06/1999 to 09/206; role: Associate Director
- Risk Factors for Venous Thromboembolism in the Community funded by NHLBI (R01 HL 66216) from 04/2001 to 04/2005; role: Co-investigator
- Angiotensin-II Blockade in Mitral Regurgitation funded by NHLBI (R01 HL 64928) fron 04/2001 to 03/2005; role: Co-investigator
- Core 1: Statistical and Administrative Core in: Gene Therapy for Vaso-occlusive disease funded by NHLBI (P01 HL 66958) from 09/2001 to 08/2008; role: Co-investigator
- Core B: Study Design and Analysis Core in: Molecular Markers of Glioma Initiation & Progression funded by NCI (P01 CA 85799) from 06/2001 to 05/2006; role: Principal Investigator
- GSK-3 and Associated Pathways in PNET funded by NINDS (R01 NS 40794) from 07/2002 to 11/2005; role: Collaborator
- Mitochondria and surgical myopreservation in aging funded by NIA (R01 AG 21201) from 09/2002 to 08/2008; role: Consultant
- Heart Failure in the Community funded by NHLBI ((R01 HL 72435) from 01/2003 to 06/2007; role: Coinvestigator
- Flavopiridol as a Potential Therapy in Multiple Myeloma funded by NCI (R01 CA 98118) funded from 07/2003 to 06/2008; role: Co-investigator
- MAGE-A3/HPV 16 Peptide Vaccines for Head and Neck Cancer funded by the NIDCR (R01 DE 15324) from 04/2004 to 12/2004; role: Co-investigator
- Xenograft Model for Studying Amplified EGFR in GBM funded by NCI (R01 NS 49720) from 08/2004 to 05/2006; role: Co-investigator
- Brain Tumor SPORE Core B Biostatistics funded by NCI (P50CA 108961) from 09/2004 to 08/2014;
   role: Core Director
- Global Differential Expression Profiling During Sudden Tumor Progression Using the Tumor Dedifferentiation Phenomenon as a Model funded by Mayo Clinic Foundation (CR20) from 04/2006 to 06/2010; role: Co-investigator
- Measles Virotherapy for Glioblastoma Multiforme funded by NCI (R21 CA 123839) from 08/2006 to 07/2010; role: Co-investigator
- 15. Utility of Serum and Tissue Biomarkers for Predicting Response to Androgen Deprivation Therapy in the Population of Men with Rising PSA Following Definitive Treatment in: SPORE in Prostate Cancer funded by NCI (P50 CA 91956) from 09/2006 to 08/2013; role: Co-investigator
- SPORE in Prostate Cancer—Biostatistics Core funded by NCI (P50 CA 91956) from 09/2006 to 08/2013;
   role: Core Director
- Statistical Responsibilities for American College Of Surgical Oncology Group (ACOSOG) funded by NCI (U10 CA 76001) with subcontract to Mayo from 03/2006 to 11/2014; role: Principal Investigator
- Epigenetic regulation of temozolomide responsiveness in glioblastoma funded by NCI (R01 CA 127716) from 01/2008 to 12/2012; role: Co-Investigator
- Correlative Science and Imaging Analysis for Z1031 funded by Breast Cancer Research Foundation (WU-09-200) with subcontract to Mayo fro m10/2008 to 09/2009; role: Principal Investigator
- A phase III randomized Double Blind study of Adjuvant ST1571 (Gleevee) versus Placebo in patients following the Resection of primary gastrointestinal Stromal Tumor (GIST) funded by Novartis from 12/2008 to 06/2009; role: Principal Investigator
- Mayo Comprehensive Cancer Center Grant funded by NCI (P30CA 15083) from 03/2009 to 07/2015; role: Statistician
- Novel Biomarkers for Aromatase Inhibitor Therapy funded by NCI (R01 CA 95614) from 04/2009 to 12/2011; role: Principal Investigator

- Optimizing Measles Virotherapy in the Treatment of Gliomas funded by NCI (R01CA 140620) from 07/2009 to 03/2011; role: Co-investigator
- ACOSOG Community Clinical Oncology Program (CCOP) Research Base funded by NCI (U10CA 149950) from 06/2010 to 07/2014; role: Co-investigator
- 25. Treatment patterns of patients with newly diagnosed malignant primary brain tumors funded by Monteris Medical from 09/2010 to 08/2011; role: Principal Investigator
- Statistical Responsibilities for American College Of Surgical Oncology Group (ACOSOG) in: Industry Supplement of Statistical Responsibilities for American College Of Surgical Oncology Group (ACOSOG) funded by Duke Clinical Research Institute from 12/2010 to 11/2011; role: Principal Investigator
- N1037 P95HER2 expression in metastatic breast cancer patients treated with trastuzumab on N0337 and NCCTG 98-32-52 funded by BioTheranostics/BioMerieux from 10/2011 to 3/2012; role: Co-investigator
- Part 1 N9831F-NCCTG-ICSC Validation study of Quantitative Single Gene Assessment of HER2 mRNA by qRT-PCR and Development and Testing of New HER2 Multi-Gene Signature funded by Genomic Health, Inc. from 04/2012 to 05/2015; role: co-Principal Investigator
- Therapeutic Strategy to Slow Progression of Calcific Aortic Valve Stenosis funded by National Center for Advancing Translational Sciences (UH2TR 000954) fro 06/2013 to 07/2015; role: Co-investigator
- Patient Centered: Risk Stratified Surveillance After Curative Research of Colorectal Cancer funded by a subcontract from a PCORI grant (CE-1304-6855) from 03/2014 to 07/2015; role: Principal Investigator
- Post-Treatment Surveillance in Breast Cancer: Bringing CER to the Alliance funded by a subcontract from a PCORI grant (CE-1304-6543) from 03/2014 to 07/2015; role: Principal Investigator
- 32. Statistics and Data Center for the Alliance for Clinical Trials in Oncology funded by NCI (U10CA 180882) from 04/2014 to 07/2015; role: Co-investigator
- Alliance NCORP Research Base funded by NCI (UG1CA 189823) from 08/2014 to 07/2015; role: Coinvestigator
- Improving How We Predict Toxicity for Older Women with Breast Cancer funded by Susan G. Komen Breast Cancer Foundation from 10/2014 to 09/2017; role: Principal Investigator (subsite)
- 35. Sarcoma Foundation from 11/2015 to 05/2017; role: Principal Investigator
- Clinical and Translational Science Center (2UL1 TR000457) funded by NIH from 06/01/12 to 05/31/17;
   role: Co-Investigator

#### For Current extramural and intramural research funding, provide the following for each award:

- 1. Source, amount, and duration of support (dates)
- 2. Name of Principal Investigator
- 3. Individual's role in project, including percentage (%) effort

#### **Current Research Support** (duplicate table as needed):

Source	NCI (U01CA 157715) subcontract SPECs Grant	
Amount	\$85,700 (subcontract amount of the larger grant)	
Duration	07/2012 to 06/2018	
Principal Investigator	Fred Hirsch	
Your Role in Project	Co-investigator (PI of the subcontract to WCMC)	
% Effort	5%	

Source	NCI (U10CA 180882) subcontract Alliance	
Amount	\$93,009	
Duration	04/2014 to 02/2019	
Principal Investigator	Dan Sargent	
Your Role in Project	Co-investigator (PI of the subcontract to WCMC)	
% Effort	20%	

Source	SU2C
Amount	\$13,515
Duration	08/2017 - 06/2020
Principal Investigator	Lewis Cantley
Your Role in Project	Co- Investigator
% Effort	5%

Source	National Institutes of Health 1UL1TR002384-01
Amount	\$5,319,707
Duration	09/2017 to 06/2022
Principal Investigator	Julianne Imperato-Mcginley
Your Role in Project	Co-Investigator
% Effort	6%

Source	NCI (5U54CA 168512) SARC Sarcoma SPORE
Amount	\$97,045
Duration	09/2016 to 08/2018
Principal Investigator	Laurence Baker, Raphael Pollock, Denise Reinke
Your Role in Project	Principal Investigator (Subcontract)
% Effort	5%

Source	Prostate Cancer Foundation
Amount	\$1,000,000
Duration	7/2017 to 8/2018
Principal Investigator	Scott Tagawa
Your Role in Project	Co-Investigator
% Effort	5%

Source	Department of Defence (Subcontract with Duke University)
Amount	\$170,266
Duration	11/2017 to 10/2020
Principal Investigator	David Harpole
Your Role in Project	Principal Investigator (Subsite)
% Effort	10%

# I. EXTRAMURAL PROFESSIONAL RESPONSIBILITIES

i.e. – Journal Reviewer, Editorial Boards, Study Sections, Invited Presentations

Activity / Responsibility	Dates
Reviewer	1991 to 1999
The American Math Monthly	
Gender and Ethnic Division Committee Member	2002 to 2005
North Central Cancer Treatment Group	
Neuro-Oncology Committee Member	2002-2006
North Central Cancer Treatment Group	
Reviewer	1994 to 1999
The American Statistician	
Editorial board member	1998 to 2003

Lawrent of Obstitution ("Acception	
Journal of Statistics Education Reviewer	2001 to 2004
Mayo Clinic Proceedings	2001 10 2004
Reviewer	2003 to 2006
Circulation	2003 to 2000
NCI Review Panel Member	
Consortium Therapeutic Studies of Primary Central Nervous System	2003, 2008
Malignancies in Adults	2003, 2006
Reviewer	2004 to present
Bioinformatics	2004 to present
NCI Study Section ad hoc Member	2004, 2007, 2008
Scientific Review Group Subcommittee H-Clinical	2004, 2007, 2008
Reviewer	2004 to present
Cancer Research	2004 to present
Editorial Board	20045-2014
Neuro-Oncology	200 10 2014
Reviewer	2005 to 2006
American Journal of Gastroenterology	2000 10 2000
Review Panel Member	2005
Academic Public-Private Partnership Program (AP4)	
NCI-Avon Foundation Review Panel Member	2005 to 2006
PFP Awards Program	
NCI Review Panel Member	2006
Advanced Proteomic Platforms and Computation Sciences for the NCI Clinical	12000
Proteomic Technologies Initiative Review Panel	
Executive Committee Member	2006 to 2012
American College of Surgeons Oncology Group	2000 10 20 12
NCI Committee Member	2007 to 2009
Breast Cancer Intergroup Committee	200. 10 2000
NCI Committee Member	2008 to 2009
Breast Cancer Intergroup Correlative Sciences Committee	2000 10 2000
NCI Study Section Member	2009 to 2012
Scientific Review Group Subcommittee H-Clinical	
NCI Steering Committee Member	2009-2013
Gastrointestinal Stromal Tumor Working Group	
NCI Steering Committee Member	2009 to present
Brain Malignancies	·
NCI Review Panel Member	2006
Novel Methodologies	
Data Monitoring Committee Member	2006 to 2011
American College of Surgeons Oncology Group	
Breast Cancer Committee Lead Statistician	2006 to 2011
American College of Surgeons Oncology Group	
Reviewer	2006
Biometrics	
NIAID Review Panel Member	2006
Cooperative Study Group for Autoimmune Disease Prevention	
Clinical Scientific Review Committee Member	2006 to 2011
American College of Surgeons Oncology Group	
Reviewer	2006 to present
International Journal of Cancer	
NICHHD Review Panel Member	2007
Obstetrical Pharmacology Research Network-Data Coordination and Analyses	
Center (OPRU-DCAC)	
Canada Cancer Society Review Panel	2007
Grant Application Review	
Editorial Board	2007 to 2010
Journal of Clinical Oncology	
NIAID Review Panel Member	2008
1909	

Dutania Octobrillo I Calina Diagram and Diagram	
Proteomics Centers for Infectious Diseases and Biodefense	
NIDDK Review Panel Member Hepatitis B Clinical Research Network (U01)	2008
NIH Review Panel Member	2008
Data Management and Coordinating Center DMCC for the Rare Diseases Clinical	
Research Network (RDCRN)	
NIDDK Review Panel Member	2008
Multi-disciplinary Approach to the Study of Chronic Pelvic Pain (MAPP) Research	2000
Network (U01)	
Data Monitoring Committee Member	2008-2012
Astra-Zeneca Phase III Trial	2000 2012
Reviewer	2008 to present
EURASIP Journal on Bioinformatics and Systems Biology	2000 to present
NCI Committee Member	2008 to 2009
Clinical Trials Advisory Committee, Operational Efficiencies Working Group	2000 to 2009
NICHHD Review Panel Member	2009
Best Pharmaceuticals for Children Act Data Coordinating Center	2009
	2009
MN Partnership for Biotechnology and Medical Genomics Review Panel Member	2009
Scientific review of grant proposals	0000
NIDA Review Panel Member	2009
Data and Statistics Center for NIDA Clinical Trials Network	
Thoracic Cancer Committee Lead Statistician	2009 to 2011
American College of Surgeons Oncology Group	
Reviewer	2009 to present
British Journal of Cancer	
Reviewer	2009 to present
Clinical Trials	
Reviewer	2009 to present
Plos1	
NCI Review Panel Member	2010
Clinical Proteomic Technologies for Cancer Initiative: Proteome Characterization	The second second
Centers	
NICHHD Review Panel Member	2010
Pediatric Trials Network	
Review Panel Member	2010
National Cancer Institute of Canada	
DOD CDMRP Review Panel Member	2010, 2011, 2012
Prostate Cancer Research Program	
Data Monitoring Committee Chair	2010 to 2014
University of Minnesota Iron Study	
Data Monitoring Committee Member	2010 to 2014
Eli Lilly 14T-MC-JVBB Trial	
Data Monitoring Committee	2010 to 2014
Incyte RESPONSE Trial	
Associate Editor	2010 to 2017
Journal of Clinical Oncology	
Deputy Editor	2017-present
Journal of Clinical Oncology	
Reviewer	2010, 2013, 2017

NICHHD Review Panel Member	2011
Systematic Review of Neonatal Medicine	
NICHHD Review Panel Member	2011
Maintenance of Child Health and Development Studies Name and Address Files	
Dutch Cancer Society Review Panel Member	2011, 2014, 2015
Scientific Grant Review	
Reviewer	2011 to present
Annals of Surgery	
Operations Committee Member	2011 to 2015
Operations Committee Member	2011102010

Alliance Adult Cancer Cooperative Group	
Scientific Concept Peer Review Committee Member	2011 to 2014
Alliance Adult Cancer Cooperative Group	2017 10 2017
Data Safety Monitoring Board Chair	2011 to present
Kanas University PAD in AA Trial	
NICHHD Review Panel Member	2012
Folic Acid Supplementation and Semen Quality Trial (FAAST)	
NIAID Review Panel Member	2012
Pre-Clinical Pharmacology and Toxicology Studies	
NCI Review Panel	2012
Pre-clinical Efficacy and Intermediate Endpoint	2040 2044
NIDA Review Panel	2012, 2014
Data, Statistics, and Clinical Trial Support for NIDA  Cancer in the Elderly Committee Lead Statistician	2012 to 2015
Alliance Adult Cancer Cooperative Group	2012 10 2015
NICHHD Review Panel Member	2013
Multiple Study Data Coordinating Center for DESPR	2013
Mayo Clinic Review Panel Member	2013
Microbiome Program Clinic Trial Funding	2010
DOD CDMRP Review Panel Member	2013, 2015
Psychological Health/Traumatic Brain Injury Research Program	
NICHHD Review Panel Member	2013
Further Investigation into the Causes of Stillbirth Concept Clearance	
Publications Committee Member	2013 to 2016
Alliance Adult Cancer Cooperative Group	
Neuro-Oncology Committee Lead Statistician	2013 to present
Alliance Adult Cancer Cooperative Group	
FDA Medical Devices Advisory Committee Member	2013 to present
General and Plastic Surgery Devices	
Damon Runyon Foundation Review Panel Member	2013 to present
Clinical Investigator Award	0044 0045
NCI Review Panel Member	2014, 2015
PLCO Secondary Studies Proposals  NIAID Review Panel Member	2014
Inner City Asthma Consortium (ICAC3)	2014
DOD CDMRP Review Panel Member	2014
Vision Research Program	2014
Associate Editor	2014 to present
Neuro-Oncology	25 1 1 15 process.

#### J. PROFESSIONAL MEMBERSHIPS

Include medical and scientific societies.

Member/Officer/Fellow/Role	Organization	Dates
Member	Operations Research Society of America	1990 to 1993
Officer	Operations Research Society of America	1992
Member	Mathematical Association of America	1991 to 1997
Officer	American Statistical Association	2000 to 2003; 2011 to 2013
Member	American Society of Clinical Oncology	2005 to present
Member	International Biometric Society, East North American Region	2006 to present
Officer	International Biometric Society, East North American Region	2008 to 2011
Member	Society of Clinical Trials	2008 to present

#### K. HONORS AND AWARDS

Name of award	Date awarded
Pi Mu Epsilon (Math honorary) - Macalester College	1980
Phi Beta Kappa - Macalester College	1982
Magna Cum Laude - Macalester College	1983
Academic All-American, Division III Volleyball - Macalester College	1983
Fredrick Hennie II Teaching Award - Massachusetts Institute of Technology	1987
Health Sciences Research Distinguished Teaching Award - Mayo Clinic	2004
Macalester College Distinguished Alumni in Science	2015

Let me show you what we will have marked as Exhibit No. 2. (Diette Exhibit No. 2 was marked for identification.)
Would you please introduce your formal 24 All right. Dr. Diette, my understanding	6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	over at Johns Hopkins University Medical Center, correct?  A That's right. Q All right. Is your department aware of the fact that you're sitting over here having a deposition taken? A I don't know if anybody knows about this today, but they wouldn't be surprised, I mean, to hear it if I told them. Q All right. They know that you frequently give depositions so they would not be surprised; is that correct?  MS. BROWN: Objection to form. THE WITNESS: They I don't know about frequently, but they know that that I do give depositions.	5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	Q All right. How recently? A Last week sometime. Q All right. Was it provided to you by counsel? A I think that's the only way I could get it. Q Okay. Very good. Now, yesterday, perhaps early in the morning, I was also provided a copy of the Defendants' Response to the Plaintiffs' Document Requests Contained in the Notice of Oral and Videotaped Deposition. Let me show you what we will have marked as Exhibit No. 2. (Diette Exhibit No. 2 was marked for identification.) BY MS. PARFITT:
	6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	over at Johns Hopkins University Medical Center, correct?  A That's right. Q All right. Let me show you what we will have marked as Exhibit No. 2. (Diette Exhibit No. 2 was marked for identification.) BY MS. PARFITT: Q Dr. Diette, let me present you with a copy of Exhibit No. 2. All right. Dr. Diette, my understanding

	Page 18		Page 20
1	your responses to the requests that were	1	much.
2	propounded upon you to for documents and other	2	BY MS. PARFITT:
3	materials prior to your deposition, correct?	3	Q All right. Dr. Diette, number or
4	MS. BROWN: Objection to the form. It	4	Exhibit No. 3, the first document, Supplemental
5	represents the lawyer's objections to the document	5	Materials Reviewed and Considered, did you prepare
6	requests you served.	6	this Supplemental Materials Reviewed and
7	MS. PARFITT: Fair.	7	Considered?
8	THE WITNESS: I I think Ms. Brown's	8	A I contributed to it, but I didn't do the
9	got it right.	9	typing.
10	BY MS. PARFITT:	10	Q Okay. What does that mean when you say
11	Q All right. Did you well, let's have	11	you contributed to it?
12	marked the attachment to the response to	12	A I helped to clarify what other
13	plaintiffs' document, which was prepared by your	13	because this this looks like it's all
14	lawyers. And let's separately mark as Exhibit	14	reports I just want to make sure what's here
15	No. 3 the attachments, if you will.	15	reports, a couple of papers probably, and I I
16	A Should I pull this apart or or you	16	helped to verify that these were also things that
17	want to do that?	17	I had had received and had a chance to look at.
18	Q And for purposes of the record,	18	Q All right. So would it be fair to say
19	Exhibit 2 will represent the entire document, the	19	that the 23 items listed on this were materials
20	response to plaintiffs' request, and No. 3 will	20	that somebody typed on a list and asked that you
21	represent just the attachments to the request,	21	review it; is that correct?
22	which would be material that you, Dr. Diette, were	22	MS. BROWN: Objection to the form.
23	to provide.	23	Misstates his testimony.
24	(Diette Exhibit No. 3 was marked	24	THE WITNESS: So I think, just in terms
25	for identification.)	25	of the sequence, I mean I've gotten materials in
23	To recitification.)		of the sequence, I mean I ve gotten materials in
	Page 19		Page 21
1	BY MS. PARFITT:	1	this matter over a period of time, right. So they
2	Q And we'll briefly just review what's	2	come in dribs and drabs. And a lot of this looks
3	here, so we can move on to other areas.	3	like some of the more recent things that came, you
4	The first page of that document	4	know, because you guys have been doing
5	indicates supplemental materials reviewed and	5	depositions, and some of the reports came in later
6	considered.	1
